XI.	
NOTES ON SCULPTURE	1—24
<p>Some practical hints (706—709).—Notes on the casting of the Sforza monument (710—715).—Models for the horse of the Sforza monument (716—718).—Occasional references to the Sforza monument (719—724).—The project of the Trivulzio monument (725).—The mint of Rome (726).—On the coining of medals (727. 728).—On plaster (729. 730).—On bronze casting generally (731—740).</p>	
INTRODUCTORY OBSERVATIONS ON THE ARCHITECTURAL DESIGNS AND WRITINGS ON ARCHITECTURE	25. 26
XII.	
ARCHITECTURAL DESIGNS	27—74
<p>I. Plans for towns (741—744).—II. Plans for canals and streets in a town (745—747).—III. Castles and villas.—A. Castles.—B. Projects for palaces.—C. Plans for small castles or villas (748—752).—IV. Ecclesiastical Architecture.—A. General observations (753—755).—B. The theory of constructing Domes.—1. Churches formed on the plan of a Greek cross.—Group I. Domes rising from a circular base.—Group II. Domes rising from a square base.—Group III. Domes rising from a square base and four pillars.—Group IV. Domes rising above an octagonal base.—Group V. Suggested by S. Lorenzo at Milan (756).—2. Churches formed on the plan of a Latin cross.—A. Studies after existing monuments.—B. Designs or Studies (757).—C. Studies for a form of church most proper for preaching—D. Design for a mausoleum.—E. Studies for the Central tower or Tiburio of Milan Cathedral (758).—F. The Project for lifting up the Battistero of Florence and setting it on a basement.—G. Description of an unknown temple (759).—V. Palace architecture (760—763).—VI. Studies of architectural details (764—769).</p>	
XIII.	
THEORETICAL WRITINGS ON ARCHITECTURE	75—99
<p>I. On Fissures in walls (770—776).—II. On Fissures in niches (777—778).—III. On the nature of the arch (779—788).—IV. On Foundations, the nature of the ground and supports (789—792).—V. On the resistance of beams (793—795).</p>	

	Pages
REMARKS ON THE STYLE OF LEONARDO'S ARCHITECTURE	100—104
XIV.	
ANATOMY, ZOOLOGY AND PHYSIOLOGY	105—133
<p>I. ANATOMY:—A general introduction (796).—Plans and suggestions for the arrangement of materials (797—802).—Plans for the representation of muscles by drawings (803—809).—On corpulency and leanness (809—811).—The divisions of the head (812. 813).—Physiological problems (814. 815).—</p> <p>II. ZOOLOGY AND COMPARATIVE ANATOMY:—The divisions of the animal kingdom (816. 817).—Miscellaneous notes on the study of Zoology (818—821).—Comparative study of the structure of bones and of the action of muscles (822—826).—</p> <p>III. PHYSIOLOGY:—Comparative study of the organs of sense in men and animals (827).—Advantages in the structure of the eye in certain animals (828 to 831).—Remarks on the organs of speech (832. 833).—On the conditions of sight (834. 835).—The seat of the common sense (836).—On the origin of the soul (837).—On the relations of the soul to the organs of sense (838).—On involuntary muscular action (839).—Miscellaneous physiological observations (840—842).—The laws of nutrition and the support of life (843—848).—On the circulation of the blood (848—850).—Some notes on medicine (851—855).</p>	
XV.	
ASTRONOMY	135—172
<p>I. THE EARTH AS A PLANET:—The earth's place in the universe (857. 858).—The fundamental laws of the solar system (859—864).—How to prove that the earth is a planet (865—867).—The principles of astronomical perspective (868 to 873).—On the luminosity of the earth in the universal space (874—878).—</p> <p>II. THE SUN:—The question of the true and of the apparent size of the sun (879—884).—Of the nature of sunlight (885).—Considerations as to the size of the sun (886—891).—</p> <p>III. THE MOON:—On the luminosity of the moon (892 to 901).—Explanation of the lumen cinereum of the moon (902).—On the spots in the moon (903—907).—On the moon's halo (908).—On instruments for observing the moon (909. 910).—</p> <p>IV. THE STARS:—On the light of the stars (911—913).—Observations on the stars (914).—On the history of astronomy (915).—Of time and its divisions (916—918).</p>	
XVI.	
PHYSICAL GEOGRAPHY	173—221
<p>INTRODUCTION.—Schemes for the arrangement of the materials (919—928).—General introduction (929).—</p> <p>I. OF THE NATURE OF WATER:—The arrangement of Book I (930).—Definitions (931. 932).—Of the surface of the water in relation to the globe (933—936).—Of the proportion of the mass of water to that of the earth (937. 938).—The theory of Plato (939).—That the flow of rivers proves the slope of the land (940).—Theory of the elevation of water within the mountains (941).—The relative height of the surface of the sea to that of the land (942—945).—</p> <p>II. ON THE OCEAN:—Refutation of Pliny's theory as to the saltness of the sea (946. 947).—The characteristics of sea water (948. 949).—On the formation of gulfs (950. 951).—On the encroachments of the sea on the land and vice versa (952—954).—The ebb and flow of the tide (955—960).—</p> <p>III. SUBTERRANEAN WATER COURSES:—Theory of the circulation of the waters (961. 962).—Observations in support of the hypothesis (963—969).—</p> <p>IV. OF RIVERS:—On the way in which the sources of rivers are fed (970).—The tide in estuaries (971).—On the alterations caused in the courses of rivers by their confluence (972—974).—Whirlpools (975).—On the alterations in the channels of rivers (976).—The origin of sand in rivers (977. 978).—</p> <p>V. ON MOUNTAINS:—The formation of mountains (979—983).—The authorities for the study</p>	

of the structure of the earth (984).—VI. GEOLOGICAL PROBLEMS:—Programme (985).—Doubts about the Deluge (986).—That marine shells could not go up the mountains (987).—The marine shells were not produced away from the sea (988).—Further researches (989—991).—Other problems (992—994).—VII. On the atmosphere:—Constituents of the atmosphere (995).—On the motion of air (996—999).—The globe an organism (1000).

Pl. XCVII. Drawing of Churches; from Manuscript B, Institut de France, Paris To face	56
Drawing of a Theatre for Preaching; from the Ashburnham Manuscript II	57
Pl. XCVIII. Design for a Mausoleum; from the Vallardi Volume, Louvre, Paris between pp. 58 and	59
Pl. XCIX. Three Drawings of Milan Cathedral: No. 1 from the Trivulzio Manu- script, Milan—see text No. 758—; No. 2 in red chalk, from Manu- script III, South Kensington Museum, London; No. 3 from the Codex Atlanticus, Milan	To face 60
Two Drawings of Milan Cathedral, from the Trivulzio Manuscript, Milan . .	on page 61
Sketch of architectural detail, Santa Maria delle Grazie, Milan	on page 62
Pl. C. Five Drawings of Milan Cathedral: No. 1 from the Codex Atlanticus, Milan; Nos. 2—4 from the Trivulzio Manuscript, Milan; No. 5 from Manuscript B, Institut de France, Paris	between pp. 64 and 65
Sketch of a Palace; from the Manzoni Manuscript, Rome	on page 67
Three Sketches of Houses: Fig. 1 and 2 from Manuscript I, Institut de France, Paris; Fig. 3 from the Arundel Manuscript, British Museum .	on page 68

	Page
Pl. CI. Two Architectural Drawings: No. 1—see text No. 760—from the Royal Library, Windsor Castle; No. 2 from the Codex Atlanticus, Milan; No. 3 Designs of Fountains, drawn with the pen on bluish paper, from the Royal Library, Windsor Castle	To face 68
Pl. CII. Three Architectural Drawings: No. 1 in red chalk, from the Royal Library, Windsor Castle; Nos. 2 (reversed) and 3—see text No. 762—from Manuscript B, Institut de France, Pance	To face 70
Two Drawings of the Base of a Column; from Manuscript III, South Kensington Museum, London	on page 72
Pl. CIII. Three Architectural Drawings: Nos. 1 and 2 from Manuscript B, Institut de France, Paris; No. 3—see text No. 769—(reversed) from the Codex Atlanticus, Milan	To face 74
Pl. CIV. Architectural Drawing; from the Arundel Manuscript, British Museum, London—see text No. 770	To face 77
Pl. CV. Two Architectural Drawings; from the Arundel Manuscript, British Museum, London—see text Nos. 771, 775, 778	To face 84
Pl. CVI. Architectural Drawing; from the Arundel Manuscript, British Museum, London—see text Nos. 772, 789	To face 94
Architectural Drawing; from the Codex Atlanticus, Milan	on page 104
Pl. CVII. Anatomical Drawing, drawn with the pen and washed with Indian ink; from the Royal Library, Windsor Castle	To face 110
Pl. CVIII. Four Anatomical Drawings; No. 1—see text No. 809—and No. 4—see text No. 814—from the Royal Library, Windsor Castle; No. 2—see text No. 824—from Manuscript K ³ , Institut de France, Paris; No. 3—see text No. 813—from Manuscript III, South Kensington Museum; and an Astronomical Drawing—see text No. 902—from the Leicester Manuscript, Holkam Hall	To face 120
Pl. CLX. Sketch Map of Milan; from the Codex Atlanticus, Milan—see text No. 1016	To face 233
Pl. CX. Four Topographical Drawings from Manuscripts in the Institut de France, Paris: No. 1 (Constantinople)—see text No. 1109—from Manuscript L; No. 2 (Vigevano)—see text No. 1024—in red chalk, from Manuscript H ² ; No. 3 (Siena, Urbino)—see text Nos. 765 and 1038—and No. 4 (Cesena)—see text No. 1040—from Manuscript L	To face 237
Pl. CXI. Two Maps: No. 1 representing the Town of Imola from the Royal Library, Windsor Castle,—see text No. 1051—; No. 2 representing the Mediterranean Sea; from the Codex Atlanticus—see text No. 1092—	between pp. 240 and 241
Pl. CXII. Coloured Map of part of Tuscany, from the Royal Library, Windsor Castle	between pp. 240 and 241
Pl. CXIII. Coloured Map of part of Central Italy; from the Royal Library, Windsor Castle	between pp. 248 and 249
Pl. CXIV. Coloured Map of the sea shore between Rome and Naples; from the Royal Library, Windsor Castle	between pp. 248 and 249

	Page
Pl. CXV. Sketch Map of the Loire at Amboise; from the Arundel Manuscript, British Museum—see text No. 1074 To face	251
Pl. CXVI. Sketch of Armenian Mountains; from the Codex Atlanticus, Milan—see text No. 1336 To face	385
Pl. CXVII. Sketch of Armenian Mountains; from the Codex Atlanticus, Milan,—see text No. 1336 To face	388
Pl. CXVIII. Sketch of a Peak in Armenia, and Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336 To face	391
Pl. CXIX. Sketch Map of Armenia; from the Codex Atlanticus, Milan—see text No. 1336 To face	392
Pl. CXX. Drawing of Oriental Heads, in red chalk; from the Royal Library, Turin To face	394
Pl. CXXI. Drawing of Musical Instruments &c.; from the Arundel Manuscript, British Museum, London—see text Nos. 1128 and 860 . . . To face	411
Pl. CXXII. Drawing of Caricatures; from the Royal Library, Windsor Castle To face	411

The size of the original drawings has been reduced on Plates LXVI, CVII, CIX, CXI No. 1, CXII, CXIII, CXIV, CXVI, CXVII, CXVIII and CXXII. On Plate CXIX it has been enlarged. The colour and tone of the paper have in every case been faithfully imitated, in order to give to the facsimiles a perfect and complete resemblance to the originals, whether drawn in charcoal, red chalk or pen and ink. It is to be understood that all Drawings here reproduced are in pen-and-ink, unless otherwise stated.

XI.

The notes on Sculpture.

Compared with the mass of manuscript treating of Painting, a very small number of passages bearing on the practice and methods of Sculpture are to be found scattered through the note books; these are here given at the beginning of this section (Nos. 706—709). There is less cause for surprise at finding that the equestrian statue of Francesco Sforza is only incidentally spoken of; for, although Leonardo must have worked at it for a long succession of years, it is not in the nature of the case that it could have given rise to much writing. We may therefore regard it as particularly fortunate that no fewer than thirteen notes in the master's handwriting can be brought together, which seem to throw light on the mysterious history of this famous work. Until now writers on Leonardo were acquainted only with the passages numbered 712, 719, 720, 722 and 723.

In arranging these notes on sculpture I have given the precedence to those which treat of the casting of the monument, not merely because they are the fullest, but more especially with a view to reconstructing the monument, an achievement which really almost lies within our reach by combining and comparing the whole of the materials now brought to light, alike in notes and in sketches.

A good deal of the first two passages, Nos. 710 and 711, which refer to this subject seems obscure and incomprehensible; still, they supplement each other and one contributes in no small degree to the comprehension of the other. A very interesting and instructive commentary on these passages may be found in the fourth chapter of Vasari's

Introduzione della Scultura under the title „Come si fanno i modelli per fare di bronzo le figure grandi e piccole, e come le forme per buttarle; come si armino di ferri, e come si gettino di metallo,” &c. Among the drawings of models of the moulds for casting we find only one which seems to represent the horse in the act of galloping—No. 713. All the other designs show the horse as pacing quietly; and as these studies of the horse are accompanied by copious notes as to the method of casting, the question as to the position of the horse in the model finally selected, seems to be decided by preponderating evidence. “Il cavallo dello Sforza”—C. Boito remarks very appositely in the Saggio on page 26, “doveva sembrare fratello al cavallo del Colleoni. E si direbbe che questo fosse figlio del cavallo del Gattamelata, il quale pare figlio di uno dei quattro cavalli che stavano forse sull’Arco di Nerone in Roma” (now at Venice). The publication of the Saggio also contains the reproduction of a drawing in red chalk, representing a horse walking to the left and supported by a scaffolding, given here on Pl. LXXVI, No. 1. It must remain uncertain whether this represents the model as it stood during the preparations for casting it, or whether—as seems to me highly improbable—this sketch shows the model as it was exhibited in 1493 on the Piazza del Castello in Milan under a triumphal arch, on the occasion of the marriage of the Emperor Maximilian to Bianca Maria Sforza. The only important point here is to prove that strong evidence seems to show that, of the numerous studies for the equestrian statue, only those which represent the horse pacing agree with the schemes of the final plans.

The second group of preparatory sketches, representing the horse as galloping, must therefore be considered separately, a distinction which, in recapitulating the history of the origin of the monument seems justified by the note given under No. 720.

Galeazzo Maria Sforza was assassinated in 1476 before his scheme for erecting a monument to his father Francesco Sforza could be carried into effect. In the following year Lodovico il Moro the young aspirant to the throne was exiled to Pisa, and only returned to Milan in 1479 when he was Lord (Governatore) of the State of Milan, in 1480 after the minister Cecco Simonetta had been murdered. It may have been soon after this that Lodovico il Moro announced a competition for an equestrian statue, and it is tolerably certain that Antonio del Pollajuolo took part in it, from this passage in Vasari’s Life of this artist: “E si trovò, dopo la morte sua, il disegno e modello che a Lodovico Sforza egli aveva fatto per la statua a cavallo di Francesco Sforza, duca di Milano; il quale disegno è nel nostro Libro, in due modi: in uno egli ha sotto Verona; nell’altro, egli tutto armato, e sopra un basamento pieno di battaglie, fa saltare il cavallo addosso a un armato; ma la cagione perchè non mettesse questi disegni in opera, non ho già potuto sapere.” One of Pollajuolo’s drawings, as here described, has lately been discovered by Senatore Giovanni Morelli in the Munich Pinacothek. Here the profile of the horseman is a portrait of Francesco Duke of Milan, and under the horse, who is galloping to the left, we see a warrior thrown and lying on the ground; precisely the same idea as we find

in some of Leonardo's designs for the monument, as on Pl. LXVI, LXVII, LXVIII, LXIX and LXXII No. 1; and, as it is impossible to explain this remarkable coincidence by supposing that either artist borrowed it from the other, we can only conclude that in the terms of the competition the subject proposed was the Duke on a horse in full gallop, with a fallen foe under its hoofs.

Leonardo may have been in the competition there and then, but the means for executing the monument do not seem to have been at once forthcoming. It was not perhaps until some years later that Leonardo in a letter to the Duke (No. 719) reminded him of the project for the monument. Then, after he had obeyed a summons to Milan, the plan seems to have been so far modified, perhaps in consequence of a remonstrance on the part of the artist, that a pacing horse was substituted for one galloping, and it may have been at the same time that the colossal dimensions of the statue were first decided on. The designs given on Pl. LXX, LXXI, LXXII, 2 and 3, LXXIII and LIV and on pp. 4 and 24, as well as three sketches on Pl. LXIX may be studied with reference to the project in its new form, though it is hardly possible to believe that in either of these we see the design as it was actually carried out. It is probable that in Milan Leonardo worked less on drawings, than in making small models of wax and clay as preparatory to his larger model. Among the drawings enumerated above, one in black chalk, Pl. LXXIII—the upper sketch on the right hand side, reminds us strongly of the antique statue of Marcus Aurelius. If, as it would seem, Leonardo had not until then visited Rome, he might easily have known this statue from drawings by his former master and friend Verrocchio, for Verrocchio had been in Rome for a long time between 1470 and 1480. In 1473 Pope Sixtus IV had this antique equestrian statue restored and placed on a new pedestal in front of the church of San Giovanni in Laterano. Leonardo, although he was painting independently as early as in 1472 is still spoken of as working in Verrocchio's studio in 1477. Two years later the Venetian senate decided on erecting an equestrian statue to Colleoni; and as Verrocchio, to whom the work was entrusted, did not at once move from Florence to Venice—where he died in 1488 before the casting was completed—but on the contrary remained in Florence for some years, perhaps even till 1485, Leonardo probably had the opportunity of seeing all his designs for the equestrian statue at Venice and the red chalk drawing on Pl. LXXIV may be a reminiscence of it.

The pen and ink drawing on Pl. LXXII, No. 3, reminds us of Donatello's statue of Gattamelata at Padua. However it does not appear that Leonardo was ever at Padua before 1499, but we may conclude that he took a special interest in this early bronze statue and the reports he could procure of it, form an incidental remark which is to be found in C. A. 145^a; 432^a, and which will be given in Vol. II under Ricordi or Memoranda.

Among the studies—in the widest sense of the word—made in preparation for this statue we may include the Anatomy of the Horse which Lomazzo and Vasari both mention; the most important parts of this work still exist in the Queen's Library at

Windsor. It was beyond a doubt compiled by Leonardo when at Milan; only a few interesting records to be found among these designs are reproduced in Nos. 716 and 717; but it must be pointed out that out of 40 sheets of studies of the movements of the horse belonging to that treatise, a horse in full gallop occurs but once.

Hérog Dujardin

Imp. Fudee

If we may trust the account given by Paulus Fovius—about 1527—Leonardo's horse was represented as "vehementer incitatus et anhelatus". Fovius had probably seen the model exhibited at Milan; but, need we, in fact, infer from this description that the horse was galloping? Compare Vasari's description of the Gattamelata monument at Padua: "Egli [Donatello] vi andò ben volentieri, e fece il cavallo di bronzo, che è in sulla piazza di Sant Antonio, nel quale si dimostra lo sbuffamento ed il fremito del cavallo, ed il grande animo e la fierezza vivacissimamente espressa dall'arte nella figura che lo cavalca".

These descriptions, it seems to me, would only serve to mark the difference between the work of the middle-ages and that of the renaissance.

We learn from a statement of Sabbà da Castiglione that, when Milan was taken by the French in 1499, the model sustained some injury; and this informant, who, however is not invariably trustworthy, adds that Leonardo had devoted fully sixteen years to this work (la forma del cavallo, intorno a cui Leonardo avea sedici anni continui consumati). This often-quoted passage has given ground for an assumption, which has no other evidence to support it, that Leonardo had lived in Milan ever since 1483. But I believe it is nearer the truth to suppose that this author's statement alludes to the fact that about sixteen years must have past since the competition in which Leonardo had taken part.

I must in these remarks confine myself strictly to the task in hand and give no more of the history of the Sforza monument than is needed to explain the texts and drawings I have been able to reproduce. In the first place, with regard to the drawings, I may observe that they are all, with the following two exceptions, in the Queen's Library at Windsor Castle; the red chalk drawing on Pl. LXXVI No. 1 is in the MS. C. A. (see No. 712) and the fragmentary pen and ink drawing on page 4 is in the Ambrosian Library. The drawings from Windsor on Pl. LXVI have undergone a trifling reduction from the size of the originals.

*There can no longer be the slightest doubt that the well-known engraving of several horsemen (Passavant, *Le Peintre-Graveur*, Vol. V, p. 181, No. 3) is only a copy after original drawings by Leonardo, executed by some unknown engraver; we have only to compare the engraving with the facsimiles of drawings on Pl. LXV, No. 2, Pl. LXVII, LXVIII and LXIX which, it is quite evident, have served as models for the engraver.*

On Pl. LXV No. 1, in the larger sketch to the right hand, only the base is distinctly visible, the figure of the horseman is effaced. Leonardo evidently found it unsatisfactory and therefore rubbed it out.

The base of the monument—the pedestal for the equestrian statue—is repeatedly sketched on a magnificent plan. In the sketch just mentioned it has the character of a shrine or aedicula to contain a sarcophagus. Captives in chains are here represented on the entablature with their backs turned to that portion of the monument which more

strictly constitutes the pedestal of the horse. The lower portion of the aedicula is surrounded by columns. In the pen and ink drawing Pl. LXVI—the lower drawing on the right hand side—the sarcophagus is shown between the columns, and above the entablature is a plinth on which the horse stands. But this arrangement perhaps seemed to Leonardo to lack solidity, and in the little sketch on the left hand, below, the sarcophagus is shown as lying under an arched canopy. In this the trophies and the captive warriors are detached from the angles. In the first of these two sketches the place for the trophies is merely indicated by a few strokes; in the third sketch on the left the base is altogether broader, buttresses and pinnacles having been added so as to form three niches. The black chalk drawing on Pl. LXVIII shows a base in which the angles are formed by niches with pilasters. In the little sketch to the extreme left on Pl. LXV, No. 1, the equestrian statue serves to crown a circular temple somewhat resembling Bramante's tempietto of San Pietro in Montorio at Rome, while the sketch above to the right displays an arrangement faintly reminding us of the tomb of the Scaligers in Verona. The base is thus constructed of two platforms or slabs, the upper one considerably smaller than the lower one which is supported on flying buttresses with pinnacles.

On looking over the numerous studies in which the horse is not galloping but merely walking forward, we find only one drawing for the pedestal, and this, to accord with the altered character of the statue, is quieter and simpler in style (Pl. LXXIV). It rises almost vertically from the ground and is exactly as long as the pacing horse. The whole base is here arranged either as an independent baldachin or else as a projecting canopy over a recess in which the figure of the deceased Duke is seen lying on his sarcophagus; in the latter case it was probably intended as a tomb inside a church. Here, too, it was intended to fill the angles with trophies or captive warriors. Probably only No. 724 in the text refers to the work for the base of the monument.

If we compare the last mentioned sketch with the description of a plan for an equestrian monument to Gian Giacomo Trivulzio (No. 725) it seems by no means impossible that this drawing is a preparatory study for the very monument concerning which the manuscript gives us detailed information. We have no historical record regarding this sketch nor do the archives in the Trivulzio Palace give us any information. The simple monument to the great general in San Nazaro Maggiore in Milan consists merely of a sarcophagus placed in recess high on the wall of an octagonal chapel. The figure of the warrior is lying on the sarcophagus, on which his name is inscribed; a piece of sculpture which is certainly not Leonardo's work. Gian Giacomo Trivulzio died at Chartres in 1518, only five months before Leonardo, and it seems to me highly improbable that this should have been the date of this sketch; under these circumstances it would have been done under the auspices of Francis I, but the Italian general was certainly not in favour with the French monarch at the time. Gian Giacomo Trivulzio was a sworn foe to Ludovico il Moro, whom he strove for years to overthrow. On the 6th September 1499 he marched victorious into Milan at the head

of a French army. In a short time, however, he was forced to quit Milan again when Ludovico il Moro bore down upon the city with a force of Swiss troops. On the 15th of April following, after defeating Lodovico at Novara, Trivulzio once more entered Milan as a Conqueror, but his hopes of becoming Governatore of the place were soon wrecked by intrigue. This victory and triumph, historians tell us, were signalised by acts of vengeance against the dethroned Sforza, and it might have been particularly flattering to him that the casting and construction of the Sforza monument were suspended for the time.

It must have been at this moment—as it seems to me—that he commissioned the artist to prepare designs for his own monument, which he probably intended should find a place in the Cathedral or in some other church. He, the husband of Margherita di Nicolino Colleoni, would have thought that he had a claim to the same distinction and public homage as his less illustrious connection had received at the hands of the Venetian republic. It was at this very time that Trivulzio had a medal struck with a bust portrait of himself and the following remarkable inscription on the reverse: **DEO FAVENTE · 1499 · DICTVS · IO · IA · EXPVLIT · LVDOVICV̄ · SF · (Sfortiam) DVC · (ducem) MLI (Mediolani) · NOÏE (nomine) · REGIS · FRANCORVM · EODEM · ANN · (anno) RED'T (redit) · LVS (Ludovicus) · SVPERATVS ET CAPTVS · EST · AB · EO.** In the Library of the Palazzo Trivulzio there is a MS. of Callimachus Siculus written at the end of the XVth or beginning of the XVIth century. At the beginning of this MS. there is an exquisite illuminated miniature of an equestrian statue with the name of the general on the base; it is however very doubtful whether this has any connection with Leonardo's design.

Nos. 731—740, which treat of casting bronze, have probably a very indirect bearing on the arrangements made for casting the equestrian statue of Francesco Sforza. Some portions evidently relate to the casting of cannon. Still, in our researches about Leonardo's work on the monument, we may refer to them as giving us some clue to the process of bronze casting at that period.

DE' STATUA.

OF A STATUE.

²Se vuoi fare vna figura di marmo fa ne prima vna ³di terra, la quale, finita che l'ài, secca e mettila in vna ⁴cassa che sia ancora capace, dopo la figura tratta ⁵d'esso loco, a ricieure il marmo che vuoi scoprirvi dentro la figura alla similitudine di quella di terra; di poi ⁷messa la figura di terra in detta cassa abbi bacchette ch'ètrino ⁸apūto per i sua busi, e spingile dentro ¹⁰tāto per ciascuno ⁹buso che ciascuna bacchetta biāca tocca la figura in ¹⁰diuersi lochi, e la parte d'esse bacchette, che resta fori della ¹¹cassa, tigni di nero, e fa il cōtrassegno alla bacchetta e al ¹²suo buso in modo che a tua posta si scōtrī; ¹³e trai d'essa cassa la figura di terra e metti il tuo ¹⁴pezzo di marmo, e tāto leua del marmo, che tutte le ¹⁵tue bacchette si nascondino sino al loro segnio in detti busi, ¹⁶e per potere questo meglio fare fa che tutta la cassa si po¹⁷ssa leuare in alto, e'l fondo d'essa cassa resti sēpre sotto ¹⁸il marmo ed a questo modo ne potrai leuare coi ferri ¹⁹con grā facilità.

If you wish to make a figure in marble, first make one of clay, and when you have finished it, let it dry and place it in a case which should be large enough, after the figure is taken out of it, to receive also the marble, from which you intend to reveal the figure in imitation of the one in clay. After you have put the clay figure into this said case, have little rods which will exactly slip in to the holes in it, and thrust them so far in at each hole that each white rod may touch the figure in different parts of it. And colour the portion of the rod that remains outside black, and mark each rod and each hole with a countersign so that each may fit into its place. Then take the clay figure out of this case and put in your piece of marble, taking off so much of the marble that all your rods may be hidden in the holes as far as their marks; and to be the better able to do this, make the case so that it can be lifted up; but the bottom of it will always remain under the marble and in this way it can be lifted with tools with great ease.

709. *figure di rilievo*. Leonardo applies this term exclusively to wholly detached figures, especially to those standing free. This note apparently refers to some particular case, though we have no knowledge of what that may have been. If we suppose it to refer to the first model of the equestrian statue of Francesco Sforza (see the introduction to the notes on Sculpture) this observation may be regarded

as one of his arguments for abandoning the first scheme of the Sforza Monument, in which the horse was to be galloping (see page 2). It is also in favour of this theory that the note is written in a manuscript volume already completed in 1492. Leonardo's opinions as to the shortcomings of plastic works when compared with paintings are given under No. 655 and 656.

iron as may be necessary. Moreover take off the mould and then make the thickness. Then fill the mould by degrees and make it good throughout; encircle and bind it with its irons and bake it inside where it has to touch the bronze.

OF MAKING THE MOULD IN PIECES.

Draw upon the horse, when finished, all the pieces of the mould with which you wish to cover the horse, and in laying on the clay cut it in every piece, so that when the mould is finished you can take it off, and then recompose it in its former position with its joins, by the countersigns.

The square blocks *a b* will be between the cover and the core, that is in the hollow where the melted bronze is to be; and these square blocks of bronze will support the intervals between the mould and the cover at an equal distance, and for this reason these squares are of great importance.

The clay should be mixed with sand.

Take wax, to return [what is not used] and to pay for what is used.

[27] Dry it in layers [28].

Make the outside mould of plaster, to save time in drying and the expense in wood; and with this plaster enclose the irons [props] both outside and inside to a thickness of two fingers; make terra cotta.

And this mould can be made in one day; half a boat load of plaster will serve you.

[42] Good.

Dam it up again with glue and clay, or white of egg, and bricks and rubbish.

Lines 22—24 are written on the margin. 1. 27 and 28 are close to the second marginal sketch. 1. 42 is a note written above the third marginal sketch and on

the back of this sheet is the text given as No. 642. Compare also No. 802.

712. See Pl. LXXVI, No. 1. This drawing has already been published in the "*Saggio delle Opere di L. da Vinci*." Milano 1872, Pl. XXIV, No. 1. But, for various reasons I cannot regard the editor's suggestions as satisfactory. He says: "*Veggonsi le armature di legname colle quali forse venne sostenuto il modello, quando per le nozze di Bianca Maria Sforza con Massimiliano imperatore, esso fu collocato sotto un arco trionfale davanti al Castello.*"

714. VASARI repeatedly states, in the fourth chapter of his *Introduzione della Scultura*, that in preparing to cast bronze statues horse-dung was frequently used by sculptors. If, notwithstanding

this, it remains doubtful whether I am justified in having introduced here this text of but little interest, no such doubt can be attached to the sketch which accompanies it.

722. This passage is quoted from a letter to a committee at Piacenza for whom Leonardo seems to have undertaken to execute some work. The letter is given entire in section XXI; in it Leonardo remonstrates as to some unreasonable demands.

723. This passage occurs in a rough copy of a letter to Ludovico il Moro, without date (see below among the letters).

724. This possibly refers to the works for the pedestal of the equestrian statue concerning which we have no farther information in the MSS. See p. 6.

725. In the original, lines 2—5, 12—14, 33—35, are written on the margin. This passage has been

recently published by G. Govi in Vol. V, Ser. 3^a, of *Transunti, Reale Accademia dei Lincei, sed. del 5 Giugno, 1881*, with the following introductory note: "*Desidero intanto che siano stampati questi pochi frammenti perchè so che sono stati trascritti ultimamente, e verranno messi in luce tra poco fuori d'Italia. Li ripubblichi pure chi vuole, ma si sappia almeno che anche tra noi si conoscevano, e s'eran raccolti da anni per comporne, quando che fosse, una edizione ordinata degli scritti di Leonardo.*"

The learned editor has left out line 22 and has written 3 *piè* for 8 *piedi* in line 25. There are other deviations of less importance from the original.

⁶ Vno corsiero grāde al naturale coll'omo sopra vuole per la spesa del metallo duc.	500.	A courser, as large as life, with the rider requires for the cost of the metal, duc.	500.

VOL. II.

C

⁶Tutte le monete che ⁷non àno jl cierchio ⁸intero, non sieno acci⁹ettate per buone, e a ¹⁰fare la perfectione del lor ¹¹cierchio è neciessario ¹²che in prima le mone¹³te siê tutte di perfetto cir¹⁴colo, e a fare questo ¹⁵e' si debbe in prima fare vna ¹⁶moneta perfetta in peso ¹⁷e in larghezza e grossez¹⁸za, e di questa tal lar¹⁹ghezza e grossezza siê fat²⁰te molte lamine, tira²¹te per una medesima tra²²fila, le quali resterã²³no a modo di righe, e ²⁴di queste tali righe si ²⁵stanpī fuori le monete ²⁶tōde, a modo che si fã²⁷no i criuelli da casta²⁸gnie, e queste mone²⁹te poi si stanpino nel ³⁰modo sopra detto ecc.

³¹Il vacuo della stanpa ³²sia più largo da alto ³³che da basso vni³⁴formemente, ³⁵e insēsibile.

³⁶Questo taglia le monete di perfetta ro³⁷tondità e grossezza e peso e ris³⁸parmia l'omo che taglia e pesa, e ³⁹rispiarmia l'omo che fa le monete ⁴⁰tonde; adūque sol passa per li mani ⁴¹del trafilatore e dello stanpato⁴²re e fa monete bellissime.

All coins which do not have the rim complete, are not to be accepted as good; and to secure the perfection of their rim it is requisite that, in the first place, all the coins should be a perfect circle; and to do this a coin must before all be made perfect in weight, and size, and thickness. Therefore have several plates of metal made of the same size and thickness, all drawn through the same gauge so as to come out in strips. And out of [24]these strips you will stamp the coins, quite round, as sieves are made for sorting chestnuts[27]; and these coins can then be stamped in the way indicated above; &c.

[31]The hollow of the die must be uniformly wider than the lower, but imperceptibly[35].

This cuts the coins perfectly round and of the exact thickness, and weight; and saves the man who cuts and weighs, and the man who makes the coins round. Hence it passes only through the hands of the gauger and of the stamper, and the coins are very superior.

726. See Pl. LXXVI No. 2. The text of lines 31—35 stands parallel l. 24—27.

Farther evidence of Leonardo's occupations and engagements at Rome under Pope Leo X. may be gathered from some rough copies of letters which

will be found in this volume. Hitherto nothing has been known of his work in Rome beyond some doubtful, and perhaps mythical, statements in Vasari.

727. The meaning of *scagliuolo* in this passage is doubtful.

⁴Il diametro si presta inuolto in nel piōbo, è battuto con martello ⁵e disteso piv volte; tal piōbo è raddoppiato e si tiene involto nel⁶la carta, acciochè tal poluere nō si versi, e poi fondi il piōbo e la pol⁷vere vi è di sopra al pionbo fonduto, la qual poi sia fregata infra due ⁸piastre d'acciaio tanto si poluerizi bene, di poi lauata coll' acqua da partire ⁹e risoluerassi la negrezza del ferro, e lascerà la poluere netta;

¹⁰Lo smeriglio in pezzi grossi si ro pe col metterlo sopra vn panno in mol¹¹ti doppi, e si percuote per fianco col martello, e così se ne va; poi mischia li ¹²a poco a poco, e poi si pesta cō facilità, e se tu lo tenessi sopra l'ancu¹³dine, mai lo rōperesti, essendo così grosso.

¹⁴Chi macina li smalti debbe fare tale esercizio sopra le piast¹⁵re d'acciaio, temperato col macinatojo da conio, e poi metter¹⁶lo nell' acqua forte, la qual risolve tutto esso acciaio che si è ¹⁷cōsumato e misto con esso smalto e lo fece nero, onde poi ¹⁸rimā purificato e netto, e se tu lo macini sul porfido, esso ¹⁹porfido si consuma e si mischia collo smalto e lo guasta, ²⁰e l'acqua da partire mai lo lieva da dosso, perchè nō può ²¹risoluer tale porfido.

²²Se vulli fare colore bello azzurro risolui lo smalto, fatto ²³col tartaro, e po' li leva il sal da dosso.

²⁴L'ottone vetrificato fa bello rosso.

The diameter is given in the lead enclosed; it is beaten with a hammer and several times extended; the lead is folded and kept wrapped up in parchment so that the powder may not be spilt; then melt the lead, and the powder will be on the top of the melted lead, which must then be rubbed between two plates of steel till it is thoroughly pulverised; then wash it with aqua fortis, and the blackness of the iron will be dissolved leaving the powder clean.

Emery in large grains may be broken by putting it on a cloth many times doubled, and hit it sideways with the hammer, when it will break up; then mix it little by little and it can be founded with ease; but if you hold it on the anvil you will never break it, when it is large.

Any one who grinds smalt should do it on plates of tempered steel with a cone shaped grinder; then put it in aqua fortis, which melts away the steel that may have been worked up and mixed with the smalt, and which makes it black; it then remains purified and clean; and if you grind it on porphyry the porphyry will work up and mix with the smalt and spoil it, and aqua fortis will never remove it because it cannot dissolve the porphyry.

If you want a fine blue colour dissolve the smalt made with tartar, and then remove the salt.

Vitrified brass makes a fine red.

well; afterwards fire it, and beat it or burnish it
with a good burnisher, and make it thick towards
the side.

STUCCO.

Powder . . . with borax and water
to a paste, and make stucco of it, and then
heat it so that it may dry, and then varnish
it, with fire, so that it shines well.

STUCCO FOR MOULDING.

Take of butter 6 parts, of wax 2 parts,
and as much fine flour as when put with
these 2 things melted, will make them as
firm as wax or modelling clay.

GLUE.

Take mastic, distilled turpentine and
white lead.

730.

TO CAST.

Tartar burnt and powdered with pla-
ster and cast cause the plaster to hold to-
gether when it is mixed up again; and then
it will dissolve in water.

731.

TO CAST BRONZE IN PLASTER.

Take to every 2 cups of plaster 1 of
ox-horns burnt, mix them together and make
your cast with it.

732.

When you want to take a cast in wax, burn
the scum with a candle, and the cast will
come out without bubbles.

733.

2 ounces of plaster to a pound of metal;—
walnut, which makes it like the curve.

la · diuidi · ī 6 · parti, ¹⁴e una d'esse parti · fia la grossezza · dināzi e la metà sēpre · piv rieto, ¹⁵e se la ballotta fia di libbre 700, ¹⁷ $\frac{1}{7}$ del · diametro della ballotta fia la sua ¹⁶grossezza · dināzi ·, e se la ballotta · fia 800 ·, l'ottavo del suo diametro ¹⁷dināzi, e se 900 · $\frac{1}{8}$ e $\frac{1}{2}$ | e se 1000 $\frac{1}{9}$.

DELLA LŪGHEZZA DELLA TRŌBA DELLA BŌBARDA.

¹⁹Se voi · ch'ella · gitti · una ballotta · di pietra · fa la lūghezza della trŏba ²⁰in 6 · o insino ī 7 ballotte ·, e se la · ballotta · fusse di ferro ·, fa ²¹detta trŏba · isino in · 12 ballotte ·, e se la ballotta · fusse di ²²piŏbo · farai la insino · in diciotto · ballotte, dico quādo la bŏbarda ²³avesse · la bocca · atta · a ricieure · in se da 600 libr · di ballotta di pietra ī su.

DELLA GROSSEZZA DE' PASSA · VOLANTI.

²⁵La grossezza dināzi de' passavolanti · nŏ deve passare dalla · metà ²⁶isino · al terzo del diametro della ballotta, E la lūghezza da 30 isino ī 36 ²⁷ballotte.

Tr. 55]

740.

¶ DELLO · ILLOTARE · IL FORNELLO DI DĒTRO. ¶

²Il fornello · debbe · ināzi · che tu · iforni il metallo · essere · illotato di terra di Valenza, ³e sopra quella · cienere.

¶ DEL RISTORARE · IL METALLO, QUĀDO · RIVOLESSE FREDDARE. ¶

⁵Quādo · tu · vedi il brŏzo volersi cŏgielare · tolli legnie di salice, schiappate ⁶sottilmēte, e cŏ quelle · fa · foco.

¶ LA CAGIONE DEL CŌGIELARSI. ¶

⁸Dico · la · cagione · d'essa cŏgielatione derivar · spesse volte · da troppo foco ⁹e ancora da legnie · mal secche.

¶ A CONOSCIERE LA DISPOSITIONE DEL FOCO. ¶

¹¹Il foco · conoscierai, quādo fia bono e vtile ·, alle fiamme · chiare, e se uedrai ¹²le ·

divide it into 6 parts and one of these parts will be its thickness at the muzzle; but at the breech it must always be half. And if the ball is to be 700 lbs., $\frac{1}{7}$ th of the diameter of the ball must be its thickness in front; and if the ball is to be 800, the eighth of its diameter in front; and if 900, $\frac{1}{8}$ th and $\frac{1}{2}$ [$\frac{3}{16}$], and if 1000, $\frac{1}{9}$ th.

OF THE LENGTH OF THE BODY OF THE GUN.

If you want it to throw a ball of stone, make the length of the gun to be 6, or as much as 7 diameters of the ball; and if the ball is to be of iron make it as much as 12 balls, and if the ball is to be of lead, make it as much as 18 balls. I mean when the gun is to have the mouth fitted to receive 600 lbs. of stone ball, and more.

OF THE THICKNESS OF SMALL GUNS.

The thickness at the muzzle of small guns should be from a half to one third of the diameter of the ball, and the length from 30 to 36 balls.

OF LUTING THE FURNACE WITHIN.

The furnace must be luted before you put the metal in it, with earth from Valenza, and over that with ashes.

OF RESTORING THE METAL WHEN IT IS BECOMING COOL.

When you see that the bronze is congealing take some willow-wood cut in small chips and make up the fire with it.

THE CAUSE OF ITS CURDLING.

I say that the cause of this congealing often proceeds from too much fire, or from ill-dried wood.

TO KNOW THE CONDITION OF THE FIRE.

You may know when the fire is good and fit for your purpose by a clear flame,

*Introductory Observations on the Architectural Designs
(XII), and Writings on Architecture (XIII).*

Until now very little has been known regarding Leonardo's labours in the domain of Architecture. No building is known to have been planned and executed by him, though by some contemporary writers incidental allusion is made to his occupying himself with architecture, and his famous letter to Lodovico il Moro,—which has long been a well-known document,—in which he offers his service as an architect to that prince, tends to confirm the belief that he was something more than an amateur of the art. This hypothesis has lately been confirmed by the publication of certain documents, preserved at Milan, showing that Leonardo was not only employed in preparing plans but that he took an active part, with much credit, as member of a commission on public buildings; his name remains linked with the history of the building of the Cathedral at Pavia and that of the Cathedral at Milan.

Leonardo's writings on Architecture are dispersed among a large number of MSS., and it would be scarcely possible to master their contents without the opportunity of arranging, sorting and comparing the whole mass of materials, so as to have some comprehensive idea of the whole. The sketches, when isolated and considered by themselves, might appear to be of but little value; it is not till we understand their general purport, from comparing them with each other, that we can form any just estimate of their true worth.

Leonardo seems to have had a project for writing a complete and separate treatise on Architecture, such as his predecessors and contemporaries had composed—Leon Battista Alberti, Filarete, Francesco di Giorgio and perhaps also Bramante. But, on the other hand, it cannot be denied that possibly no such scheme was connected with the isolated notes and researches, treating on special questions, which are given in this work; that he was merely working at problems in which, for some reason or other he took a special interest.

A great number of important buildings were constructed in Lombardy during the period between 1472 and 1499, and among them there are several by unknown architects,

of so high an artistic merit, that it is certainly not improbable that either Bramante or Leonardo da Vinci may have been, directly or indirectly, concerned in their erection.

Having been engaged, for now nearly twenty years, in a thorough study of Bramante's life and labours, I have taken a particular interest in detecting the distinguishing marks of his style as compared with Leonardo's. In 1869 I made researches about the architectural drawings of the latter in the *Codex Atlanticus* at Milan, for the purpose of finding out, if possible the original plans and sketches of the churches of Santa Maria delle Grazie at Milan, and of the Cathedral at Pavia, which buildings have been supposed to be the work both of Bramante and of Leonardo. Since 1876 I have repeatedly examined Leonardo's architectural studies in the collection of his manuscripts in the Institut de France, and some of these I have already given to the public in my work on "Les Projets Primitifs pour la Basilique de St. Pierre de Rome", Pl. 43. In 1879 I had the opportunity of examining the manuscript in the Palazzo Trivulzio at Milan, and in 1880 Dr Richter showed me in London the manuscripts in the possession of Lord Ashburnham, and those in the British Museum. I have thus had opportunities of seeing most of Leonardo's architectural drawings in the original, but of the manuscripts themselves I have deciphered only the notes which accompany the sketches. It is to Dr Richter's exertions that we owe the collected texts on Architecture which are now published, and while he has undertaken to be responsible for the correct reading of the original texts, he has also made it his task to extract the whole of the materials from the various MSS. It has been my task to arrange and elucidate the texts under the heads which have been adopted in this work. MS. B. at Paris and the *Codex Atlanticus* at Milan are the chief sources of our knowledge of Leonardo as an architect, and I have recently subjected these to a thorough re-investigation expressly with a view to this work.

A complete reproduction of all Leonardo's architectural sketches has not, indeed, been possible, but as far as the necessarily restricted limits of the work have allowed, the utmost completeness has been aimed at, and no efforts have been spared to include every thing that can contribute to a knowledge of Leonardo's style. It would have been very interesting, if it had been possible, to give some general account at least of Leonardo's work and studies in engineering, fortification, canal-making and the like, and it is only on mature reflection that we have reluctantly abandoned this idea. Leonardo's occupations in these departments have by no means so close a relation to literary work, in the strict sense of the word as we are fairly justified in attributing to his numerous notes on Architecture.

Leonardo's architectural studies fall naturally under two heads:

I. Those drawings and sketches, often accompanied by short remarks and explanations, which may be regarded as designs for buildings or monuments intended to be built. With these there are occasionally explanatory texts.

II. Theoretical investigations and treatises. A special interest attaches to these because they discuss a variety of questions which are of practical importance to this day. Leonardo's theory as to the origin and progress of cracks in buildings is perhaps to be considered as unique in its way in the literature of Architecture.

*Architectural Designs.**I. Plans for towns.*

A. Sketches for laying out a new town with a double system of high-level and low-level road-ways.

Pl. LXXVII, No. 1 (MS. B, 15^b). A general view of a town, with the roads outside it sloping up to the high-level ways within.

Pl. LXXVII, No. 3 (MS. B, 16^b, see No. 741; and MS. B, 15^b, see No. 742) gives a partial view of the town, with its streets and houses, with explanatory references.

Pl. LXXVII, No. 2 (MS. B, 15^b; see No. 743). View of a double staircase with two opposite flights of steps.

Pl. LXXVIII, Nos. 2 and 3 (MS. B, 37^a). Sketches illustrating the connection of the two levels of roads by means of steps. The lower galleries are lighted by openings in the upper road way.

B. Notes on removing houses (MS. Br. M., 270^b, see No. 744).

B. 16 a]

741.

Le strade *m* sono piv alte che le strade *p s* braccia 6., e ciascuna ² strada de' essere larga braccia 20, e avere $\frac{1}{2}$ braccio di calo dalle stremità ³ al mezzo, e in esso mezzo sia a ogni braccio uno braccio di ⁴ fessura, largo uno dito, dove l'acqua che

piove debba scolare nelle ca⁵ve fatte al medesimo piano di *p · s*, e da ogni stretmità della ⁶larghezza di detta strada sia uno portico di larghezza di braccia 6 i sul ⁷le colonne, e sappi che, chi volesse andare per tutta la terra per le ⁸strade alte, potrà a suo acconcio usarle, e chi volesse andare ⁹per le basse, ancora il simile; per le strade alte non devono andare ¹⁰carri, nè altre simili cose, anzi siano solamēte per li giēteli o ¹¹mini; per le basse deono andare i carri e altre some al uso ¹²e commodità del popolo; l'una casa de' volgiere le schiene ¹³all'altra, lasciādo la strada bassa in mezzo, ed agli usci *n* ¹⁴si mettano le vettovaglie, come legnie, vino e simili cose; per le ¹⁵vie sotterrane si de' votare destri, stalle e simili cose fetide ¹⁶dall'uno arco all'altro

hollows made on the same level as *p s*. And on each side at the extremity of the width of the said road let there be an arcade, 6 braccia broad, on columns; and understand that he who would go through the whole place by the high level streets can use them for this purpose, and he who would go by the low level can do the same. By the high streets no vehicles and similar objects should circulate, but they are exclusively for the use of gentlemen. The carts and burdens for the use and convenience of the inhabitants have to go by the low ones. One house must turn its back to the other, leaving the lower streets between them. Provisions, such as wood, wine and such things are carried in by the doors *n*, and privies, stables and other fetid matter must be emptied away underground. From one arch to the next

742.

B. 56]

de' essere braccia 300, cioè ciascuna via che ricieve il lume dalle fessu²re delle strade di sopra, e a ogni arco de' essere una scala a luma³ca tōda, perchè ne' cātoni delle quadre si piscia, e larga, e nella ⁴prima uolta sia vn uscio ch'entri i destri e pisciatoi comuni, e per ⁵scala si disciēda dalla strada alta alla bassa, e le strade ⁶alte si comincino fori delle porte, e givnte a esse porte abbia⁷no composto l'altezza di braccia 6; Fia fatta detta terra o presso ⁸a mare o altro fiume grosso, acciocchè le brutture della ⁹città, menate dall'acqua sieno portate via.

must be 300 braccia, each street receiving its light through the openings of the upper streets, and at each arch must be a winding stair on a circular plan because the corners of square ones are always fouled; they must be wide, and at the first vault there must be a door entering into public privies and the said stairs lead from the upper to the lower streets and the high level streets begin outside the city gates and slope up till at these gates they have attained the height of 6 braccia. Let such a city be built near the sea or a large river in order that the dirt of the city may be carried off by the water.

stieno ¹³a un altezza sarà una cōca, come qui disotto, la quale fia all' entrare della ¹⁴terra; e meglio alquāto dētro aciochè nimici nō la disfacciessino.,

to oblige the waters to keep constantly at the same level will be a sort of dock, as shown below, situated at the entrance of the town; or better still, some way within, in order that the enemy may not destroy it[14].

B. 36a]

746.

Tanto sia larga la stra²da, quanto è la universale ³altezza delle case.

Let the width of the streets be equal to the average height of the houses.

Br. M. 270d]

747.

Il fiume di mezzo ²nō ricieva acqua ³torbida, ma tale ac⁴qua vada per li fossi ⁵di fori della terra ⁶con ⁴ molina nell'ē⁷trata e ⁴ nella u⁸scita, e questo si fa⁹rà col ringorgare l'acqua ¹⁰di sopra a Romolontino;

¹¹Facciāsi fonti ¹²in cias¹³scuna piazza.

The main underground channel does not receive turbid water, but that water runs in the ditches outside the town with four mills at the entrance and four at the outlet; and this may be done by damming the water above Romorantin.

[11]There should be fountains made in each piazza[13].

746. 3. alteza . . chase.

747. 1. el . . mezo. 3. mattale. 7. nella vs. 8. ecquesto. 9. ringhorghare. 12. [chome] in cias. 13. piazza.

747. In the original this text comes immediately after the passage given as No. 744. The remainder of the writing on the same page refers to the construction of canals and is given later, in the "Topographical Notes".

10. *Romolontino* is Romorantin, South of Orleans in France.

Lines 1—11 are written to the right of the plan lines 11—13 underneath it. J. P. R.

III. Castles and Villas.

A. Castles.

Pl. LXXX, No. 1 (P. V. fol. 39^b; No. d'ordre 2282). The fortified place here represented is said by Vallardi to be the "castello" at Milan, but without any satisfactory reason. The high tower behind the "rivellino" ravelin—seems to be intended as a watch-tower.

Pl. LXXX, No. 2 (MS. B, 23^b). A similarly constructed tower probably intended for the same use.

Pl. LXXX, No. 3 (MS. B). Sketches for corner towers with steps for a citadel.

Pl. LXXX, No. 4 (W. XVI). A cupola crowning a corner tower; an interesting example of decorative fortification. In this reproduction of the original pen and ink drawing it appears reversed.

B. Projects for Palaces.

Pl. LXXXI, No. 2 (MS. C. A, 75^b; 221^a, see No. 748): Project for a royal residence at Amboise in France.

Pl. LXXXII, No. 1 (C. A 308^a; 939^a). A plan for a somewhat extensive residence, and various details; but there is no text to elucidate it; in courts are written the three names:

Sām	(St. Mark)	cosi	(Cosmo)	giovā	(John),
arch		mo		nino	
o					

C. Plans for small castles or Villas.

The three following sketches greatly resemble each other.

Pl. LXXXII, No. 2 (MS. K³ 36^b; see No. 749).

Handwritten notes in a cursive script, likely describing architectural details or materials.

Handwritten notes in a cursive script, providing further details or instructions related to the architectural drawing.

Pl. LXXXII, No. 3 (MS. B 60^a; see No. 750).

Pl. LXXXIII (W. XVII). The text on this sheet refers to Cyprus (see Topographical Notes No. 1103), but seems to have no direct connection with the sketches inserted between.

Pl. LXXXVIII, Nos. 6 and 7 (MS. B, 12^a; see No. 751). A section of a circular pavilion with the plan of a similar building by the side of it. These two drawings have a special historical interest because the text written below mentions the Duke and Duchess of Milan.

The sketch of a villa on a terrace at the end of a garden occurs in C. A. 150; and in C. A. 77^b; 225^b is another sketch of a villa somewhat resembling the Belvedere of Pope Innocent VIII, at Rome. In C. A. 62^b; 193^b there is a Loggia.

Pl. LXXXII, No. 4 (C. A. 387^a; 1198^a) is a tower-shaped Loggia above a fountain. The machinery is very ingeniously screened from view.

C. A. 75^b; 221^a]

748.

[Il palazzo del principe de' auere dināti vna piazza.]

²Le abitazioni doue s'abbia a ballare o fare diuersi ³salti o uari movimēti con moltitudine di gente sieno ter⁴rene, perchè già n'ò veduto ruinare colla morte di ⁵molti; E sopra tutto fa che ogni muro, per sottile che ⁶sia, abbia fondamēto in terra o sopra archi bene ⁷fondati.

⁸Sieno li mezzanelli delli abitacoli ⁹diuisi da muri fatti di stretti mat¹⁰toni e senza legniami per ri¹¹spetto del fuoco.

¹²Tutti li neciessari abbino esalatio¹³ne per le grossezze de' muri, e in ¹⁴modo che spirino per li tetti.

¹⁵Li mezzanelli sieno in volta, le quali ¹⁶sarā tanto più forti quāto e' ¹⁷sarā mi-nori.

¹⁸Le catene di quercia siē rinchi¹⁹use per li muri acciò nō siē offese ²⁰da foco.

The Palace of the prince must have a piazza in front of it.

Houses intended for dancing or any kind of jumping or any other movements with a multitude of people, must be on the ground-floor; for I have already witnessed the destruction of some, causing death to many persons, and above all let every wall, be it ever so thin, rest on the ground or on arches with a good foundation.

Let the mezzanines of the dwellings be divided by walls made of very thin bricks, and without wood on account of fire.

Let all the privies have ventilation [by shafts] in the thickness of the walls, so as to exhale by the roofs.

The mezzanines should be vaulted, and the vaults will be stronger in proportion as they are of small size.

The ties of oak must be enclosed in the walls in order to be protected from fire.

748. 1. palazo. 2. abitacionini . . . abballare offare. 3. chomoltitudine. 4. rrene . . . cholla. 5. 751. This passage was first published by AMORETTI in *Memorie Storiche* Cap. X: *Una sua opera da riportarsi a quest'anno fu il bagno fatto per la duchessa Beatrice nel parco o giardino del Castello. Lionardo non solo ne disegnò il piccolo edificio a foggia di padiglione, nel cod. segnato Q. 3, dandone anche separatamente la pianta; ma sotto vi scrisse: Padiglione del giardino della duchessa; e sotto la pianta: Fondamento del padiglione ch'è nel mezzo del labirinto del duca di Milano; nessuna data è presso il padiglione, disegnato nella pagina 12, ma poco sopra fra molti circoli intrecciati vedesi = 10 Luglio 1492 = e nella pagina 2 presso ad alcuni disegni di legumi qualcheuno ha letto Settembre 1482 in vece di 1492, come dovea scriverevi, e probabilmente scrisse Lionardo.*

The original text however hardly bears the interpretation put upon it by AMORETTI. He is mis-

taken as to the mark on the MS. as well as in his statements as to the date, for the MS. in question has no date; the date he gives occurs, on the contrary, in another note-book. Finally, it appears to me quite an open question whether Leonardo was the architect who carried out the construction of the dome-like Pavilion here shown in section, or of the ground plan of the Pavilion drawn by the side of it. Must we, in fact, suppose that "il duca di Milano" here mentioned was, as has been generally assumed, Ludovico il Moro? He did not hold this title from the Emperor before 1494; till that date he was only called *Governatore* and Leonardo in speaking of him, mentions him generally as "il Moro" even after 1494. On January 18, 1491, he married Beatrice d'Este the daughter of Ercole I, Duke of Ferrara. She died on the 2nd January 1497, and for the reasons I have given it seems improbable that it should be this princess who is here spoken of as the "Duchessa di Milano". From the style of the handwriting it appears to me to be beyond

No. 1 to the left hand at the bottom.

754. This text is written by the side of the plan
given on Pl. XCI. No. 2.

12. The Abbey of Chiaravalle, a few miles from
Milan, has a central tower on the intersection of the

cross in the style of that of the Certosa of Pavia, but
the style is mediaeval (A. D. 1330). Leonardo seems
here to mean, that in a building, in which the cir-
cular form is strongly conspicuous, the campanile
must either be separated, or rise from the centre of
the building and therefore take the form of a lantern.

755. This text is to the left of the domed church reproduced on Pl. LXXXVII, No. 2.

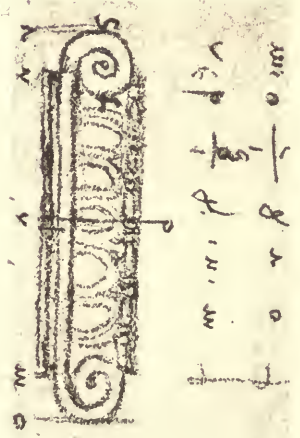

B. The theory of Dome Architecture.

This subject has been more extensively treated by Leonardo in drawings than in writing. Still we may fairly assume that it was his purpose, ultimately to embody the results of his investigation in a "Trattato delle Cupole." The amount of materials is remarkably extensive. MS. B is particularly rich in plans and elevations of churches with one or more domes—from the simplest form to the most complicated that can be imagined. Considering the evident connexion between a great number of these sketches, as well as the impossibility of seeing in them designs or preparatory sketches for any building intended to be erected, the conclusion is obvious that they were not designed for any particular monument, but were theoretical and ideal researches, made in order to obtain a clear understanding of the laws which must govern the construction of a great central dome, with smaller ones grouped round it; and with or without the addition of spires, so that each of these parts by itself and in its juxtaposition to the other parts should produce the grandest possible effect.

In these sketches Leonardo seems to have exhausted every imaginable combination.¹ The results of some of these problems are perhaps not quite satisfactory; still they cannot be considered to give evidence of a want of taste or of any other defect in Leonardo's architectural capacity. They were no doubt intended exclusively for his own instruction, and, before all, as it seems, to illustrate the features or consequences resulting from a given principle.

¹ *In MS. B, 32^b (see Pl. C III, No. 2) we find eight geometrical patterns, each drawn in a square; and in MS. C. A., fol. 87 to 98 form a whole series of patterns done with the same intention.*

PL. LXXXV
1
2
3
4
5
6

I have already, in another place,¹ pointed out the law of construction for buildings crowned by a large dome: namely, that such a dome, to produce the greatest effect possible, should rise either from the centre of a Greek cross, or from the centre of a structure of which the plan has some symmetrical affinity to a circle, this circle being at the same time the centre of the whole plan of the building.

Leonardo's sketches show that he was fully aware, as was to be expected, of this truth. Few of them exhibit the form of a Latin cross, and when this is met with, it generally gives evidence of the determination to assign as prominent a part as possible to the dome in the general effect of the building.

While it is evident, on the one hand, that the greater number of these domes had no particular purpose, not being designed for execution, on the other hand several reasons may be found for Leonardo's perseverance in his studies of the subject.

Besides the theoretical interest of the question for Leonardo and his Trattato and besides the taste for domes prevailing at that time, it seems likely that the intended erection of some building of the first importance like the Duomos of Pavia and Como, the church of Sta. Maria delle Grazie at Milan, and the construction of a Dome or central Tower (Tiburio) on the cathedral of Milan, may have stimulated Leonardo to undertake a general and thorough investigation of the subject; whilst Leonardo's intercourse with Bramante for ten years or more, can hardly have remained without influence in this matter. In fact now that some of this great Architect's studies for S. Peter's at Rome have at last become known, he must be considered henceforth as the greatest master of Dome-Architecture that ever existed. His influence, direct or indirect even on a genius like Leonardo seems the more likely, since Leonardo's sketches reveal a style most similar to that of Bramante, whose name indeed, occurs twice in Leonardo's manuscript notes. It must not be forgotten that Leonardo was a Florentine; the characteristic form of the two principal domes of Florence, Sta. Maria del Fiore and the Battisterio, constantly appear as leading features in his sketches.

The church of San Lorenzo at Milan, was at that time still intact. The dome is to this day one of the most wonderful cupolas ever constructed, and with its two smaller domes might well attract the attention and study

¹ Les Projets Primitifs pour la Basilique de St. Pierre de Rome, par Bramante, Raphael etc., Vol. I, p. 2.

of a never resting genius such as Leonardo. A whole class of these sketches betray in fact the direct influence of the church of S. Lorenzo, and this also seems to have suggested the plan of Bramante's dome of St. Peter's at Rome.

In the following pages the various sketches for the construction of domes have been classified and discussed from a general point of view. On two sheets: Pl. LXXXIV (C. A. 354^b; 118^a) and Pl. LXXXV, Nos. 1—11 (Ash. II, 6^b) we see various dissimilar types, grouped together; thus these two sheets may be regarded as a sort of nomenclature of the different types, on which we shall now have to treat.

1. Churches formed on the plan of a Greek cross.

Group I.

Domes rising from a circular base.

The simplest type of central building is a circular edifice.

Pl. LXXXIV, No. 9. Plan of a circular building surrounded by a colonnade.

Pl. LXXXIV, No. 8. Elevation of the former, with a conical roof.

Pl. XC. No. 5. A dodecagon, as most nearly approaching the circle.

Pl. LXXXVI, No. 1, 2, 3. Four round chapels are added at the extremities of the two principal axes;—compare this plan with fig. 1 on p. 44 and fig. 3 on p. 47 (W. P. 5^b) where the outer wall is octagonal.

Group II.

Domes rising from a square base.

The plan is a square surrounded by a colonnade, and the dome seems to be octagonal.

Pl. LXXXIV. The square plan below the circular building No. 8, and its elevation to the left, above the plan: here the ground-plan is square, the upper storey octagonal. A further development of this type is shown in two sketches C. A. 3^a (not reproduced here), and in

Pl. LXXXVI, No. 5 (which possibly belongs to No. 7 on Pl. LXXXIV).

Pl. LXXXV, No. 4, and p. 45, Fig. 3, a Greek cross, repeated p. 45, Fig. 3, is another development of the square central plan.

The remainder of these studies show two different systems; in the first the dome rises from a square plan,—in the second from an octagonal base.

Group III.

Domes rising from a square base and four pillars.¹

a) **First type.** *A Dome resting on four pillars in the centre of a square edifice, with an apse in the middle, of each of the four sides. We have eleven variations of this type.*

aa) *Pl. LXXXVIII, No. 3.*

bb) *Pl. LXXX, No. 5.*

cc) *Pl. LXXXV, Nos. 2, 3, 5.*

dd) *Pl. LXXXIV, No. 1 and 4 beneath.*

ee) *Pl. LXXXV, Nos. 1, 7, 10, 11.*

b) **Second type.** *This consists in adding aisles to the whole plan of the first type; columns are placed between the apses and the aisles; the plan thus obtained is very nearly identical with that of S. Lorenzo at Milan.*

Fig. 1 on p. 56. (MS. B, 75^a) shows the result of this treatment adapted to a peculiar purpose about which we shall have to say a few words later on.

Pl. XCV, No. 1, shows the same plan but with the addition of a short nave. This plan seems to have been suggested by the general arrangement of S. Sepolcro at Milan.

MS. B. 57^b (see the sketch reproduced on p. 51). By adding towers in the four outer angles to the last named plan, we obtain a plan which bears the general features of Bramante's plans for S. Peter's at Rome.² (See p. 51 Fig. 1.)

Group IV.

Domes rising from an octagonal base.

This system, developed according to two different schemes, has given rise to two classes with many varieties.

In a) On each side of the octagon chapels of equal form are added.

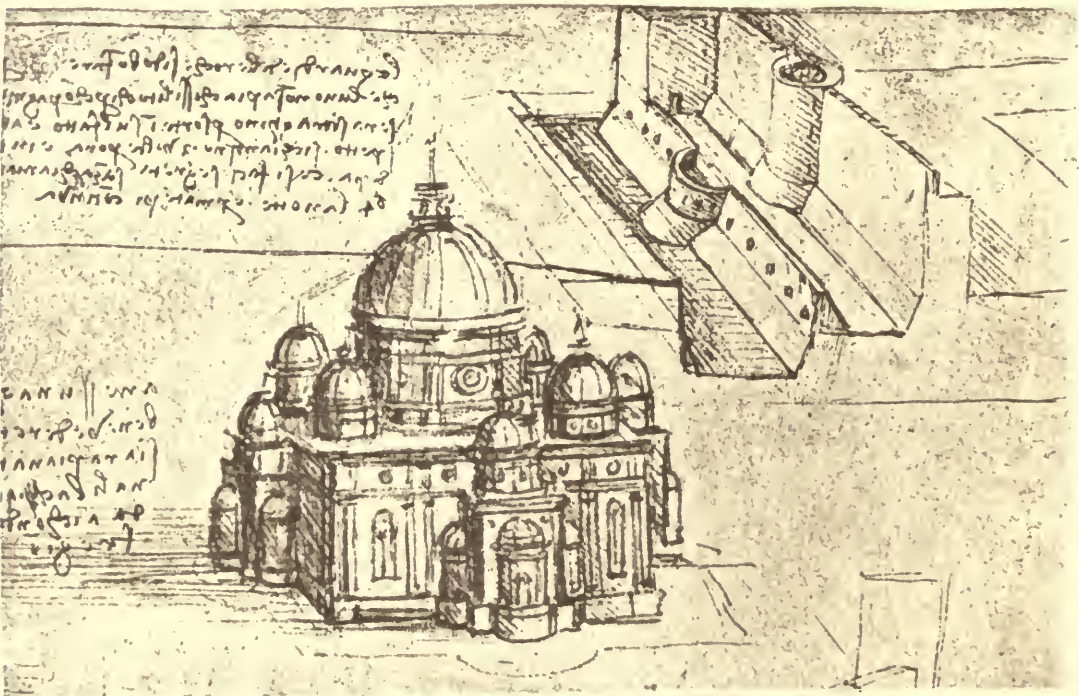

In b) The chapels are dissimilar; those which terminate the principal axes being different in form from those which are added on the diagonal sides of the octagon.

a. First Class.

The Chapel "degli Angeli," at Florence, built only to a height of about 20 feet by Brunellesco, may be considered as the prototype of this group; and, indeed it probably suggested it. The fact that we see in MS. B. 11^b

¹ The ancient chapel San Satiro, via del Falcone, Milan, is a specimen of this type.

² See *Les projets primitifs etc.*, Pl. 9—12.

(Pl. XCIV, No. 3) by the side of Brunellesco's plan for the Basilica of *Sto. Spirito* at Florence, a plan almost identical with that of the *Capella degli Angeli*, confirms this supposition. Only two small differences, or we may say improvements, have been introduced by Leonardo. Firstly the back of the chapels contains a third niche, and each angle of the Octagon a folded pilaster like those in Bramante's *Sagrestia di S. M. presso San Satiro* at Milan, instead of an interval between the two pilasters as seen in the *Battistero* at Florence and in the *Sacristy of Sto. Spirito* in the same town and also in the above named chapel by Brunellesco.

The first set of sketches which come under consideration have at first sight the appearance of mere geometrical studies. They seem to have been suggested by the plan given on page 44 Fig. 2 (MS. B, 55^a) in the centre of which is written "Santa Maria in perticha da Pavia", at the place marked A on the reproduction.

a) (MS. B, 34^b, page 44 Fig. 3). In the middle of each side a column is added, and in the axes of the intercolumnar spaces a second row of columns forms an aisle round the octagon. These are placed at the intersection of a system of semicircles, of which the sixteen columns on the sides of the octagon are the centres.

b) The preceding diagram is completed and becomes more monumental in style in the sketch next to it (MS. B, 35^a, see p. 45 Fig. 1). An outer aisle is added by circles, having for radius the distance between the columns in the middle sides of the octagon.

c) (MS. B, 96^b, see p. 45 Fig. 2). Octagon with an aisle round it; the angles of both are formed by columns. The outer sides are formed by 8 niches forming chapels. The exterior is likewise octagonal, with the angles corresponding to the centre of each of the interior chapels.

Pl. XCII, No. 2 (MS. B. 96^b). Detail and modification of the preceding plan—half columns against piers—an arrangement by which the chapels of the aisle have the same width of opening as the inner arches between the half columns. Underneath this sketch the following note occurs: *questo vole avere 12 facce · cō 12 tabernaculi · come · a · b.* (This will have twelve sides with twelve tabernacles as a b.) In the remaining sketches of this class the octagon is not formed by columns at the angles.

The simplest type shows a niche in the middle of each side and is repeated on several sheets, viz: MS. B 3; MS. C. A. 354^b (see Pl. LXXXIV, No. 11), and MS. Ash II 6^b; (see Pl. LXXXV, No. 9 and the elevations No. 8; Pl. XCII, No. 3; MS. B. 4^b [not reproduced here] and Pl. LXXXIV, No. 2).

Fig. 1.

Fig. 2.

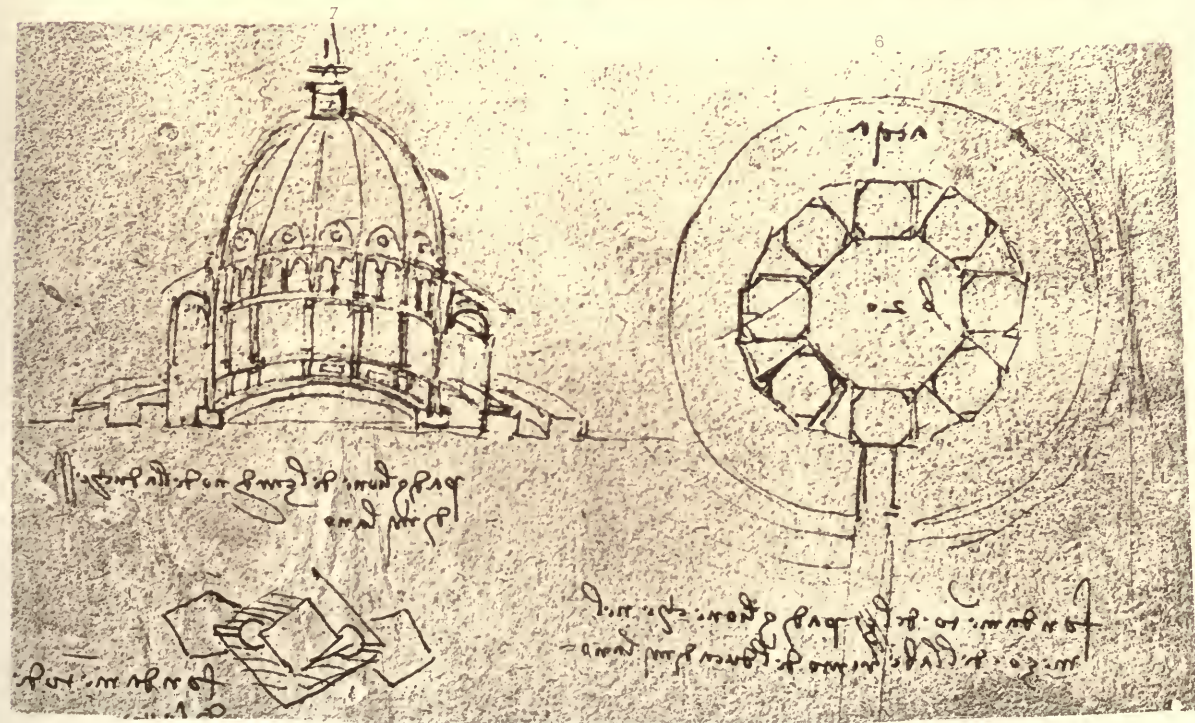

Fig. 3.

Fig. 1.

Fig. 2.

Fig. 3.

Pl. XCII, 3 (MS. B, 56^b) corresponds to a plan like the one in MS. B 35^a, in which the niches would be visible outside or, as in the following sketch, with the addition of a niche in the middle of each chapel.

Pl. XC, No. 6. The niches themselves are surrounded by smaller niches (see also No. 1 on the same plate).

Octagon expanded on each side.

A. by a square chapel:

MS. B. 34^b (not reproduced here).

B. by a square with 3 niches:

MS. B. 11^b (see Pl. XCIV, No. 3).

C. by octagonal chapels:

a) MS. B, 21^a; Pl. LXXXVIII, No. 14.

b) No. 2 on the same plate. Underneath there is the remark: "quest'è come le 8 cappele àno a essere facte" (this is how the eight chapels are to be executed).

c) Pl. LXXXVIII, No. 5. Elevation to the plans on the same sheet, it is accompanied by the note: "ciasscuno de' 9 tiburi no' uole · passare l'alteza · di · 2 · quadri" (neither of the 9 domes must exceed the height of two squares).

d) Pl. LXXXVIII, No. 1, Inside of the same octagon.

MS. B, 30^a, and 34^b; these are three repetitions of parts of the same plan with very slight variations.

D. by a circular chapel:

MS. B, 18^a (see Fig. 1 on page 47) gives the plan of this arrangement in which the exterior is square on the ground floor with only four of the chapels projecting, as is explained in the next sketch.

Pl. LXXXIX, MS. B, 17^b. Elevation to the preceding plan sketched on the opposite side of the sheet, and also marked A. It is accompanied by the following remark, indicating the theoretical character of these studies: questo · edifitio · anchora · starebbe · bene affarlo dalla linja · a · b · c · d · insù. ("This edifice would also produce a good effect if only the part above the lines a b, c d, were executed").

Pl. LXXXIV, No. 11. The exterior has the form of an octagon, but the chapels project partly beyond it. On the left side of the sketch they appear larger than on the right side.

Pl. XC, No. 1, (MS. B, 25^b); Repetition of Pl. LXXXIV, No. 11.

Pl. XC, No. 2. Elevation to the plan No. 1, and also to No. 6 of the same sheet.

Handwritten text in a cursive script, likely a description or commentary on the architectural drawings. The text is arranged in several paragraphs, with some lines starting with a small 'd' or 's'.

Handwritten text at the bottom of the page, possibly a signature or a concluding note. The text is written in a cursive script and is somewhat difficult to decipher due to the handwriting.

A
Fig. 1.

M
Fig. 2.

Fig. 3.

E. By chapels formed by four niches:

Pl. LXXXIV, No. 7 (the circular plan on the left below) shows this arrangement in which the central dome has become circular inside and might therefore be classed after this group.¹

The sketch on the right hand side gives most likely the elevation for the last named plan.

F. By chapels of still richer combinations, which necessitate an octagon of larger dimensions:

Pl. XCI, No. 2 (MS. Ash. II. 8^b)²; on this plan the chapels themselves appear to be central buildings formed like the first type of the third group. Pl. LXXXVIII, No. 3.

Pl. XCI, No. 2 above; the exterior of the preceding figure, particularly interesting on account of the alternation of apses and niches, the latter containing statues of a gigantic size, in proportion to the dimension of the niches.

b. Second Class.

Composite plans of this class are generally obtained by combining two types of the first class—the one worked out on the principal axes, the other on the diagonal ones.

MS. B. 22 shows an elementary combination, without any additions on the diagonal axes, but with the dimensions of the squares on the two principal axes exceeding those of the sides of the octagon.

In the drawing W. P. 5^b (see page 44 Fig. 1) the exterior only of the edifice is octagonal, the interior being formed by a circular colonnade; round chapels are placed against the four sides of the principal axes.

The elevation, drawn on the same sheet (see page 47 Fig. 3), shows the whole arrangement which is closely related with the one on Pl. LXXXVI No. 1, 2.

MS. B. 21^a shows:

- a) four sides with rectangular chapels crowned by pediments
Pl. LXXXVII No. 3 (plan and elevation);*
- b) four sides with square chapels crowned by octagonal domes.
Pl. LXXXVII No. 4; the plan underneath.*

MS. B. 18^a shows a variation obtained by replacing the round chapels in the principal axes of the sketch MS. B. 18^a by square ones, with an

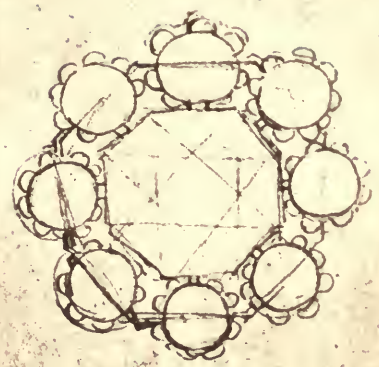

¹ This plan and some others of this class remind us of the plan of the Mausoleum of Augustus as it is represented for instance by Durand. See Cab. des Estampes, Bibliothèque Nationale, Paris, Topographie de Rome, V, 6, 82.

² The note accompanying this plan is given under No. 754.

1

PL. 2.

Handwritten text, possibly a signature or label, written vertically next to the drawing.

Handwritten text, possibly a signature or label, written vertically at the bottom right of the page.

Handwritten text in a cursive script, likely a description or list of architectural details. It includes several lines of text, some of which are preceded by horizontal lines, possibly indicating measurements or specific parts of the building.

Handwritten text in a cursive script, continuing the architectural notes. It appears to be a list or a set of instructions related to the building's design.

apse. Leonardo repeated both ideas for better comparison side by side, see page 47. Fig. 2.

Pl. LXXXIX (MS. B. 17^b). Elevation for the preceding figure. The comparison of the drawing marked M. with the plan on page 47 Fig. 2, bearing the same mark, and of the elevation on Pl. LXXXIX below (marked A) with the corresponding plan on page 47 is highly instructive, as illustrating the spirit in which Leonardo pursued these studies.

Pl. LXXXIV No. 12 shows the design Pl. LXXXVII No. 3 combined with apses, with the addition of round chapels on the diagonal sides.

Pl. LXXXIV No. 13 is a variation of the preceding sketch.

Pl. XC No. 3. MS. B. 25^b. The round chapels of the preceding sketch are replaced by octagonal chapels, above which rise campaniles.

Pl. XC No. 4 is the elevation for the preceding plan.

Pl. XCII No. 1. (MS. B. 39^b); the plan below. On the principal as well as on the diagonal axes are diagonal chapels, but the latter are separated from the dome by semicircular recesses. The communication between these eight chapels forms a square aisle round the central dome.

Above this figure is the elevation, showing four campaniles on the angles.¹

Pl. CXXXIV No. 3. On the principal axes are square chapels with three niches; on the diagonals octagonal chapels with niches. Cod. Atl. 340^b gives a somewhat similar arrangement.

MS. B. 30. The principal development is thrown on the diagonal axes by square chapels with three niches; on the principal axes are inner recesses communicating with outer ones.

The plan Pl. XCIII No. 2 (MS. B. 22) differs from this only in so far as the outer semicircles have become circular chapels, projecting from the external square as apses; one of them serves as the entrance by a semicircular portico.

The elevation is drawn on the left side of the plan.

MS. B. 19. A further development of MS. B. 18, by employing for the four principal chapels the type Pl. LXXXVIII No. 3, as we have already seen in Pl. XCI No. 2; the exterior presents two varieties.

a) The outer contour follows the inner.²

b) It is semicircular.

Pl. LXXXVII No. 2 (MS. B. 18^b) Elevation to the first variation MS. B. 19. If we were not certain that this sketch was by Leonardo, we might feel tempted to take it as a study by Bramante for St. Peter's at Rome.³

¹ The note accompanying this drawing is reproduced under No. 753.

² These chapels are here sketched in two different sizes; it is the smaller type which is thus formed.

³ See Les projets primitifs Pl. 43.

MS. P. V. 39^b. In the principal axes the chapels of MS. B. 19, and semicircular niches on the diagonals. The exterior of the whole edifice is also an octagon, concealing the form of the interior chapels, but with its angles on their axes.

Group V.

Suggested by San Lorenzo at Milan.

In MS. C. A. 266 II^b, 812^b there is a plan almost identical with that of San Lorenzo.—The diagonal sides of the irregular octagon are not indicated. If it could be proved that the arches which, in the actual church, exist on these sides in the first story, were added in 1574 by Martimo Bassi, then this plan and the following section would be still nearer the original state of San Lorenzo than at present. A reproduction of this slightly sketched plan has not been possible. It may however be understood from Pl. LXXXVIII No. 3, by suppressing the four pillars corresponding to the apses.

Pl. LXXXVII No. 1 shows the section in elevation corresponding with the above-named plan. The recessed chapels are decorated with large shells in the halfdomes like the arrangement in San Lorenzo, but with proportions like those of Bramanté's Sacristy of Santa Maria presso S. Satiro.

MS. C. A. 266; a sheet containing three views of exteriors of Domes. On the same sheet there is a plan similar to the one above-named but with uninterrupted aisles and with the addition of round chapels in the axes (compare Pl. XCVII No. 3 and page 44 Fig. 1), perhaps a reminiscence of the two chapels annexed to San Lorenzo.—Leonardo has here sketched the way of transforming this plan into a Latin cross by means of a nave with side aisles.

Pl. XCI No. 1. Plan showing a type deprived of aisles and comprised in a square building which is surrounded by a portico. It is accompanied by the following text:

Ash. II. 7a]

756.

Questo edifitio è abitato di sotto · e di sopra come · è san Sepulcro, ²ed è sopra come sotto, saluo che 'l di sopra · al tiburio · c · d · e 'l di sotto ³al tiburio a · b · e quādo

This edifice is inhabited [accessible] below and above, like San Sepolcro, and it is the same above as below, except that the upper story has the dome c d; and the

756. 1. socto . . chome . . sansepulchro. 2. chome. 3. a · b · e equādo. 4. nela . . socto. 4. chali ro schalini. 5. schalini . .

756. The church of San Sepolcro at Milan, founded in 1030 and repeatedly rebuilt after the middle of the XVIth century, still stands over the crypt of the original structure.

Handwritten text in a non-Latin script, possibly Indic or Persian, located to the left of a small sketch.

entri nella chiesa di sotto, 4tu cali 10 scalini, e quādo mōti in quello di sopra tu sali 20 5scalini, che a $\frac{1}{3}$ l'uno fāno 10 braccia, e questo è lo spatio ch'è 6infra i piani dell'una e l'altra chiesa.

lower has the dome *a b*, and when you enter into the crypt, you descend 10 steps, and when you mount into the upper you ascend 20 steps, which, with $\frac{1}{3}$ braccio for each, make 10 braccia, and this is the height between one floor of the church and the other.

10. br . e. 11. ell'altra.

Above the plan on the same sheet is a view of the exterior. By the aid of these two figures and the description, sections of the edifice may easily be reconstructed. But the section drawn on the left side of the building seems not to be in keeping with the same plan, notwithstanding the explanatory note written underneath it: "dentro il difitio di sopra" (interior of the edifice above)¹.

Before leaving this group, it is well to remark that the germ of it seems already indicated by the diagonal lines in the plans Pl. LXXXV No. 11 and No. 7. We shall find another application of the same type to the Latin cross in Pl. XCVII No. 3.

¹ The small inner dome corresponds to *a b* on the plan—it rises from the lower church into the upper—, above, and larger, rises the dome *c d*. The aisles above and below thus correspond (è di sopra come di sotto, salvoche etc.). The only difference is, that in the section Leonardo has not taken the trouble to make the form octagonal, but has merely sketched circular lines in perspective.

J. P. R.

2. Churches formed on the plan of a Latin cross.

We find among Leonardo's studies several sketches for churches on the plan of the Latin cross; we shall begin by describing them, and shall add a few observations.

A. Studies after existing Monuments.

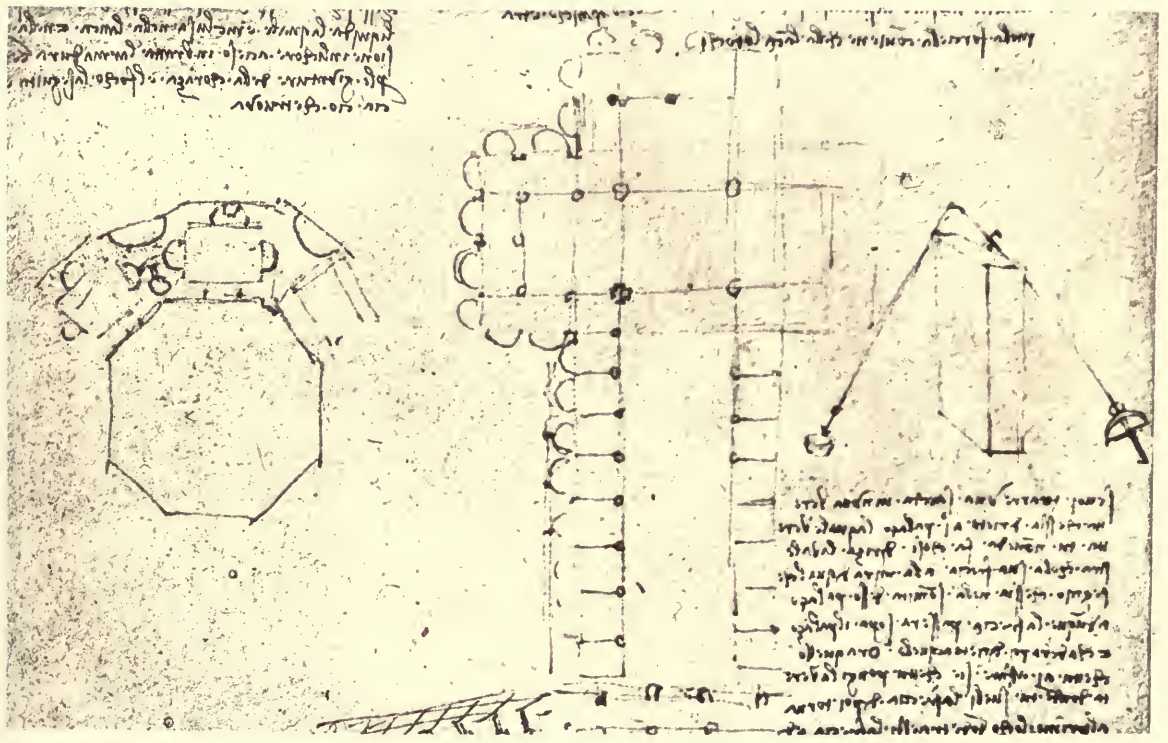

Pl. XCIV No. 2. (MS. B. 11^b.) Plan of Santo Spirito at Florence, a basilica built after the designs of Brunellesco.—Leonardo has added the indication of a portico in front, either his own invention or the reproduction of a now lost design.

Pl. XCV No. 2. Plan accompanied by the words: "A è santo sepolcro di milano di sopra" (A is the upper church of S. Sepolcro at Milan); although since Leonardo's time considerably spoilt, it is still the same in plan.

The second plan with its note: "B è la sua parte socto tera" (B is its subterranean part [the crypt]) still corresponds with the present state of this part of the church as I have ascertained by visiting the crypt with this plan. Excepting the addition of a few insignificant walls, the state of this interesting part of the church still conforms to Leonardo's sketch; but in the Vestibolo the two columns near the entrance of the winding stairs are absent.

B. Designs or Studies.

Pl. XCV No. 1. Plan of a church evidently suggested by that of San Sepolcro at Milan. The central part has been added to on the principle of the second type of Group III. Leonardo has placed the "coro" (choir) in the centre.

Pl. XCVI No. 2. In the plan the dome, as regards its interior, belongs to the First Class of Group IV, and may be grouped with the one in MS. B. 35^a. The nave seems to be a development of the type represented in *Pl. XCV No. 2, B.* by adding towers and two lateral porticos¹.

On the left is a view of the exterior of the preceding plan. It is accompanied by the following note:

B. 24 a]

757.

Questo edifitio è abitato di sopra e di sotto; ²di sopra · si va · per li campanili · e uassi sù per lo piano ³dove sono fondati · i · 4 · tiburi, e detto piano ⁴à uno parapetto dināzi, e di detti tiburi nessuno ⁵ne riesce in chiesa, anzi sono separati ī tutto.

This building is inhabited below and above; the way up is by the campaniles, and in going up one has to use the platform, where the drums of the four domes are, and this platform has a parapet in front, and none of these domes communicate with the church, but they are quite separate.

757. 4. a ī parapecto. 5. neriessie . . tucto.

Pl. XCVI No. 1 (MS. C. A. 16^b; 65^a). Perspective view of a church seen from behind; this recalls the Duomo at Florence, but with two campaniles².

Pl. XCVII No. 3 (MS. B. 52^a). The central part is a development of S. Lorenzo at Milan, such as was executed at the Duomo of Pavia. There is sufficient analogy between the building actually executed and this sketch to suggest a direct connection between them. Leonardo accompanied Francesco di Giorgio³ when the latter was consulted on June 21st, 1490 as to this church; the fact that the only word accompanying the plan is: "sagrestia", seems to confirm our supposition, for the sacristies were added only in 1492, i. e. four years after the beginning of the Cathedral, which at that time was most likely still sufficiently unfinished to be capable of receiving the form of the present sketch.

Pl. XCVII No. 2 shows the exterior of this design. Below is the note: edifitio al proposito del fōdameto figurato di socto (edifice proper for the ground plan figured below).

Here we may also mention the plan of a Latin cross drawn in MS. C. A. fol. 266 (see p. 50).

Pl. XCIV No. 1 (MS. L. 15^b). External side view of Brunellesco's Florentine basilica San Lorenzo, seen from the North.

Pl. XCIV No. 4 (V. A. V, 1). Principal front of a nave, most likely of a church on the plan of a Latin cross. We notice here not only the

¹ Already published in *Les projets primitifs Pl. IX.*

² Already published in the *Saggio Pl. IX.*

³ See MALASPINA, il Duomo di Pavia. *Documents.*

principal features which were employed afterwards in Alberti's front of S. Maria Novella, but even details of a more advanced style, such as we are accustomed to meet with only after the year 1520.

In the background of Leonardo's unfinished picture of St. Jerome (Vatican Gallery) a somewhat similar church front is indicated (see the accompanying sketch).

The view of the front of a temple, apparently a dome in the centre of four corinthian porticos bearing pediments (published by Amoretti Tav. II. B as being by Leonardo), is taken from a drawing, now at the Ambrosian Gallery. We cannot consider this to be by the hand of the master.

A - plan de l'église de la Chapelle de la Cour
 B - plan de l'église de la Chapelle de la Cour

C. *Studies for a form of a Church most proper for preaching.*

The problem as to what form of church might answer the requirements of acoustics seems to have engaged Leonardo's very particular attention. The designation of "teatro" given to some of these sketches, clearly shows which plan seemed to him most favourable for hearing the preacher's voice.

Pl. XCVII, No. 1 (MS. B, 52). Rectangular edifice divided into three naves with an apse on either side, terminated by a semicircular theatre with rising seats, as in antique buildings. The pulpit is in the centre. Leonardo has written on the left side of the sketch: "teatro da predicare" (Theatre for preaching).

MS. B, 55^a (see page 56, Fig. 1). A domed church after the type of Pl. XCV, No. 1, shows four theatres occupying the apses and facing the square "coro" (choir), which is in the centre between the four pillars of the dome.¹ The rising arrangement of the seats is shown in the sketch above. At the place marked B Leonardo wrote *teatri per uldire messa* (rows of seats to hear mass), at T *teatri*, and at C *coro* (choir).

In MS. C.A. 260, are slight sketches of two plans for rectangular choirs and two elevations of the altar and pulpit which seem to be in connection with these plans.

In MS. Ash II, 8^a (see p. 56 and 57. Fig. 2 and 3). "Locho dove si predica" (Place for preaching). A most singular plan for a building. The interior is a portion of a sphere, the centre of which is the summit of a column destined to serve as the preacher's pulpit. The inside is somewhat

¹ The note *teatro de predicar*, on the right side is, I believe, in the handwriting of Pompeo Leoni. J. P. R.

Fig. 1.

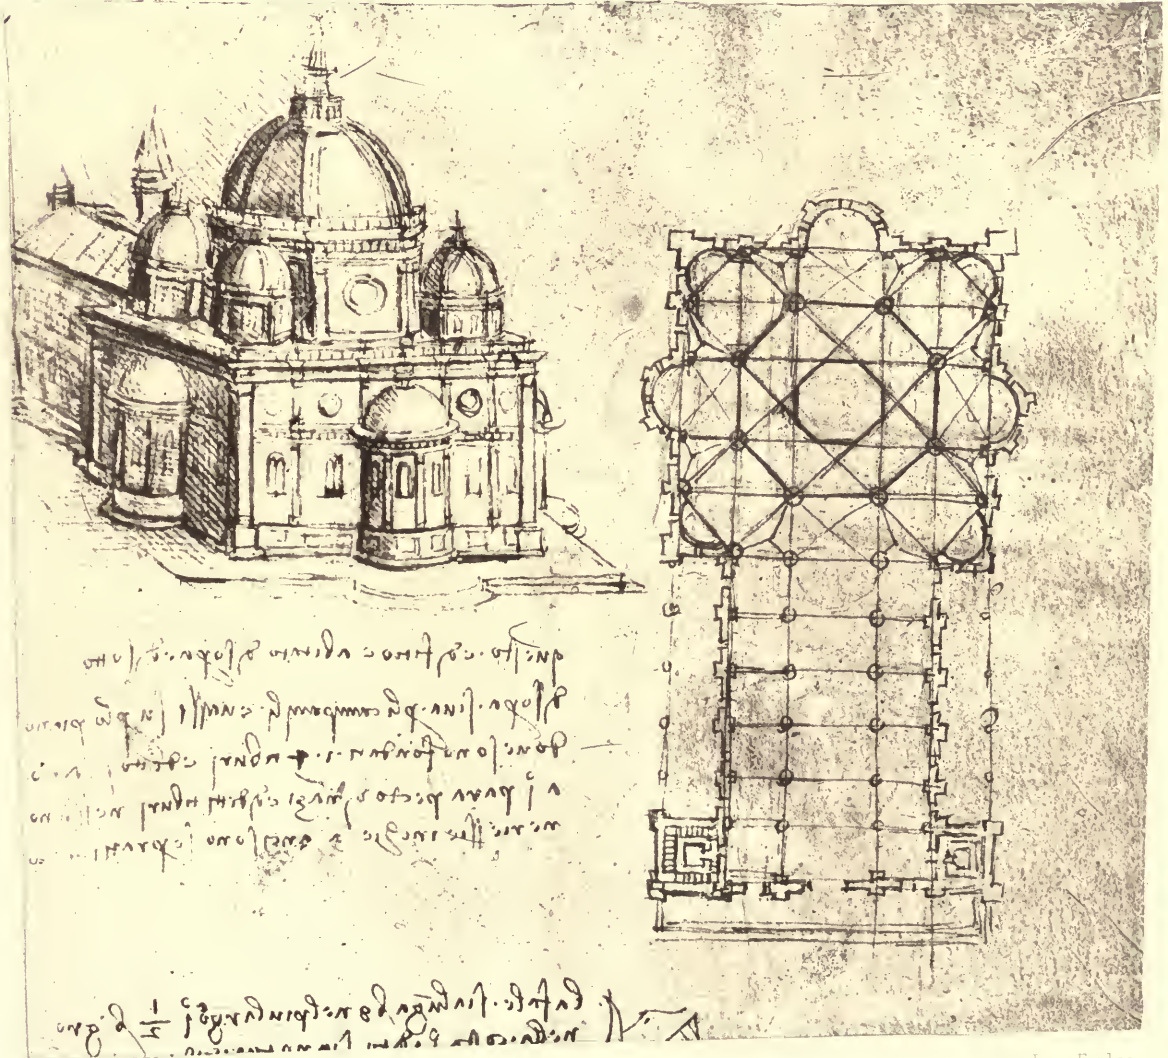

Fig. 2.

Hélog Dujardin.

Imp. Fudes

2

like a modern theatre, whilst the exterior and the galleries and stairs recall the ancient amphitheatres.

Page 57, Fig. 4. A plan accompanying the two preceding drawings. If this gives the complete form Leonardo intended for the edifice, it would

Fig. 3.

Fig. 4.

have comprised only about two thirds of the circle. Leonardo wrote in the centre "fondamento"; a word he often employed for plans, and on the left side of the view of the exterior: locho dove si predicha (a place for preaching in).

D. Design for a Mausoleum.

Pl. XCVIII (P. V., 182. No. d'ordre 2386). In the midst of a hilly landscape rises an artificial mountain in the form of a gigantic cone, crowned by an imposing temple. At two thirds of the height a terrace is cut out with six doorways forming entrances to galleries, each leading to three sepulchral halls, so constructed as to contain about five hundred funeral urns, disposed in the customary antique style. From two opposite sides steps ascend to the terrace in a single flight and beyond it to the temple above. A large circular opening, like that in the Pantheon, is in the dome above what may be the altar, or perhaps the central monument on the level of the terrace below.

The section of a gallery given in the sketch to the right below shows the roof to be constructed on the principle of superimposed horizontal layers, projecting one beyond the other, and each furnished with a sort of heel, which appears to be undercut, so as to give the appearance of a beam from within. Granite alone would be adequate to the dimensions here given to the key stone, as the thickness of the layers can hardly be considered to be less than a foot. In taking this as the basis of our calculation for the dimensions of the whole construction, the width of the chamber would be about 25 feet but, judging from the number of urns it contains—and there is no reason to suppose that these urns were larger than usual—it would seem to be no more than about 8 or 10 feet.

The construction of the vaults resembles those in the galleries of some Etruscan tumuli, for instance the Regulini Galeassi tomb at Cervetri (late-ly discovered) and also that of the chamber and passages of the pyramid of Cheops and of the treasury of Atreus at Mycenae.

The upper cone displays not only analogies with the monuments mentioned in the note, but also with Etruscan tumuli, such as the Cocumella

Imp. Eudes

tomb at Vulci, and the Regolini Galeassi tomb¹. The whole scheme is one of the most magnificent in the history of Architecture.

It would be difficult to decide as to whether any monument he had seen suggested this idea to Leonardo, but it is worth while to enquire, if any monument, or group of monuments of an earlier date may be supposed to have done so.²

¹ See FERGUSON, *Handbook of Architecture*, I, 291.

² There are, in Algiers, two Monuments, commonly called "Le Madracen" and "Le tombeau de la Chrétienne," which somewhat resemble Leonardo's design. They are known to have served as the Mausolea of the Kings of Mauritania. Pomponius Mela, the geographer of the time of the Emperor Claudius, describes them as having been "Monumentum commune regiae gentis." See Le Madracen, Rapport fait par M. le Grand Rabbin AB. CAHEN, Constantine 1873—Mémoire sur les fouilles exécutées au Madras'en . . . par le Colonel BRUNON, Constantine 1873.—Deux Mausolées Africains, le Madracen et le tombeau de la Chrétienne par M. J. DE LAURIÈRE, Tours 1874.—Le tombeau de la Chrétienne, Mausolée des rois Mauritauiens par M. BERBRUGGER, Alger 1867.—I am indebted to M. LE BLANC, of the Institut, and M. LUD. LALANNE, Bibliothécaire of the Institut for having first pointed out to me the resemblance between these monuments; while M. ANT. HÉRON DE VILLEFOSSE of the Louvre was kind enough to place the above-mentioned rare works at my disposal. Leonardo's observations on the coast of Africa are given later in this work. The Herodium near Bethlehem in Palestine (Jebel el Fureidís, the Frank Mountain) was, according to the latest researches, constructed on a very similar plan. See Der Frankenberg, von Baurath C. SCHICK in Jerusalem, Zeitschrift des Deutschen Palästina-Vereins, Leipzig 1880, Vol. III, pages 88—99 and Plates IV and V. J. P. R.

E. Studies for the Central Tower, or Tiburio of Milan Cathedral.

Towards the end of the fifteenth century the Fabbricceria del Duomo had to settle on the choice of a model for the crowning and central part of this vast building. We learn from a notice published by G. L. Calvi¹ that among the artists who presented models in the year 1488 were: Bramante, Pietro da Gorgonzola, Luca Paperio (Fancelli), and Leonardo da Vinci.—

Several sketches by Leonardo refer to this important project:

Pl. CXIX, No. 2 (MS. S. K. III, No. 36^a) a small plan of the whole edifice.—The projecting chapels in the middle of the transept are wanting here. The nave appears to be shortened and seems to be approached by an inner “vestibolo”.—

Pl. C, No. 2 (Tr. 21). Plan of the octagon tower, giving the disposition of the buttresses; starting from the eight pillars adjoining the four principal piers and intended to support the eight angles of the Tiburio. These buttresses correspond exactly with those described by Bramante as existing in the model presented by Omodeo.²

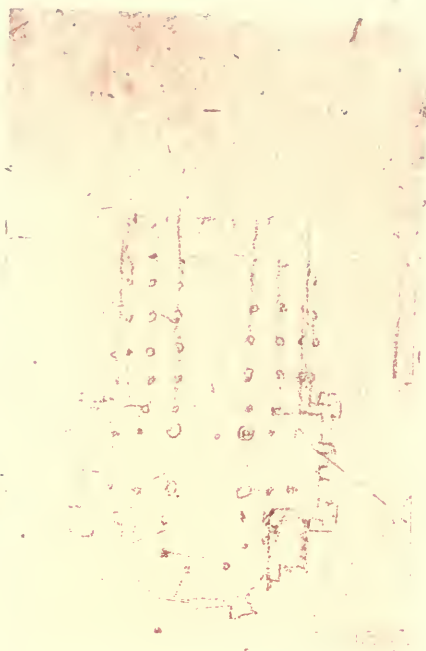

Pl. C, 3 (MS. Tr. 16). Two plans showing different arrangements of the buttresses, which seem to be formed partly by the intersection of a system of pointed arches such as that seen in

Pl. C, No. 5 (MS. B, 27^a) destined to give a broader base to the drum. The text underneath is given under No. 788.

MS. B, 3—three slight sketches of plans in connexion with the preceding ones.

¹ G. L. CALVI, *Notizie sulla vita e sulle opere dei principali architetti scultori e pittori che fiorirono in Milano, Part III, 20.* See also: H. DE GEYMÜLLER, *Les projets primitifs etc. I, 37 and 116—119.*—The Fabbricceria of the Duomo has lately begun the publication of the archives, which may possibly tell us more about the part taken by Leonardo, than has hitherto been known.

² Bramante's opinion was first published by G. MONGERI, *Arch. stor. Lomb. V, fasc. 3* and afterwards by me in the publication mentioned in the preceding note.

Pl. XCIX, No. 1 (MS. Tr. 15) contains several small sketches of sections and exterior views of the Dome; some of them show buttress-walls shaped as inverted arches. Respecting these Leonardo notes:

Tr. 15]

758.

L'arco rivescio è migliore per fare
² spalla che l'ordinario, perchè il rovescio
³ trova sotto se muro resistete alla sua
⁴ debolezza, e l'ordinario nō trova nel suo
⁵ debole se non aria.

The inverted arch is better for giving a shoulder than the ordinary one, because the former finds below it a wall resisting its weakness, whilst the latter finds in its weak part nothing but air.

758. 1. larcho. 2. isspalla . . riverscio. 4. debolezza ellordinario.

Three slight sketches of sections on the same leaf—above those reproduced here—are more closely connected with the large drawing in the centre of *Pl. C, No. 4 (MS, Tr. 41)* which shows a section of a very elevated dome, with double vaults, connected by ribs and buttresses ingeniously disposed, so as to bring the weight of the lantern to bear on the base of the dome.

A sketch underneath it shows a round pillar on which is indicated which part of its summit is to bear the weight: "il pilastro sarà charicho in a . b." (The column will bear the weight at a b.) Another note is above on the right side: *Larcho regierà tanto sotto asse chome di sopra se* (The arch supports as much below it [i. e. a hanging weight] as above it).

Pl. C, No. 1 (C. A. 303^a). Larger sketch of half section of the Dome, with a very complicated system of arches, and a double vault. Each stone is shaped so as to be knit or dovetailed to its neighbours. Thus the inside of the Dome cannot be seen from below.

MS. C. A. 303^b. A repetition of the preceding sketch with very slight modifications.

Fig. 1.

Fig. 2.

MS. Tr. 9 (see Fig. 1 and 2). Section of the Dome with reverted buttresses between the windows, above which iron anchors or chains seem to be intended. Below is the sketch of the outside.

Pl. XCIX, No. 3 (C. A., 262^a) four sketches of the exterior of the Dome.

C. A. 12. Section, showing the points of rupture of a gothic vault, in evident connection with the sketches described above.

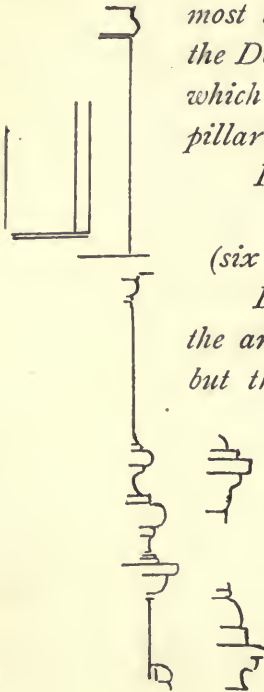

It deserves to be noticed how easily and apparently without effort, Leonardo manages to combine gothic details and structure with the more modern shape of the Dome.

The following notes are on the same leaf, oni cosa pōderosa, and oni cosa pōderosa desidera de(scendere); farther below, several multiplications most likely intended to calculate the weight of some parts of the Dome, thus $16 \times 47 = 720$; $720 \times 800 = 176000$, next to which is written: peso del pilastro di 9 teste (weight of the pillar 9 diameters high).

Below: $176000 \times 8 = 1408000$; and below:

*Semjliō e se cē 80 (?) il peso del tiburio
(six millions six hundred (?) 80 the weight of the Dome),*

Bossi hazarded the theory that Leonardo might have been the architect who built the church of Sta. Maria delle Grazie, but there is no evidence to support this, either in documents or in the materials supplied by Leonardo's manuscripts and drawings. The sketch given at the side shows the arrangement of the second and third socle on the apses of the choir of that church; and it is remarkable that those sketches, in MS. S. K. M. II², 2^a and 1^b, occur with the passage given in Volume I as No. 665 and 666 referring to the composition of the Last Supper in the Refectory of that church.

F. The Project for lifting up the Battistero of Florence and setting it on a basement.

Among the very few details Vasari gives as to the architectural studies of Leonardo, we read: "And among these models and designs there was one by way of which he showed several times to many ingenious citizens who then governed Florence, his readiness to lift up without ruining it, the church of San Giovanni in Florence (the Battistero, opposite the Duomo) in order to place under it the missing basement with steps; he supported his assertions with reasons so persuasive, that while he spoke the undertaking seemed feasible, although every one of his hearers, when he had departed, could see by himself the impossibility of so vast an undertaking."¹

In the MS. C. A. fol. 293, there are two sketches which possibly might have a bearing on this bold enterprise. We find there a plan of a circular or polygonal edifice surrounded by semicircular arches in an oblique position. These may be taken for the foundation of the steps and of the new platform. In the perspective elevation the same edifice, forming a polygon, is shown as lifted up and resting on a circle of inverted arches which rest on an other circle of arches in the ordinary position, but so placed that the inverted arches above rest on the spandrels of the lower range.

What seems to confirm the supposition that the lifting up of a building is here in question, is the indication of engines for winding up, such as jacks, and a rack and wheel. As the lifting apparatus represented on this sheet does not seem particularly applicable to an undertaking of such magnitude, we may consider it to be a first sketch or scheme for the engines to be used.

¹ This latter statement of Vasari's must be considered to be exaggerated. I may refer here to some data given by LIBRI, *Histoire des sciences mathématiques en Italie* (II, 216, 217): "On a cru dans ces derniers temps faire un miracle en mécanique en effectuant ce transport, et cependant dès l'année 1455, Gaspard Nadi et Aristote de Fioravantio avaient transporté, à une distance considérable, la tour de la Magione de Bologne, avec ses fondements, qui avait presque quatre-vingts pieds de haut. Le continuateur de la chronique de Pugliola dit que le trajet fut de 35 pieds et que durant le transport auquel le chroniqueur affirme avoir assisté, il arriva un accident grave qui fit pencher de trois pieds la tour pendant qu'elle était suspendue, mais que cet accident fut promptement réparé (Muratori, *Scriptores rer. ital.* Tom. XVIII, col. 717, 718). Alidosi a rapporté une note où Nadi rend compte de ce transport avec une rare simplicité. D'après cette note, on voit que les opérations de ce genre n'étaient pas nouvelles. Celle-ci ne coûta que 150 livres (monnaie d'alors) y compris le cadeau que le Légat fit aux deux mécaniciens. Dans la même année, Aristote redressa le clocher de Cento, qui penchait de plus de cinq pieds (Alidosi, *instruttione* p. 188 — Muratori, *Scriptores rer. ital.*, tom. XXIII, col. 888. — Bossii, *chronica Mediol.*, 1492, in-fol. ad ann. 1455). On ne conçoit pas comment les historiens des beaux-arts ont pu négliger de tels hommes." J. P. R.

G. Description of an unknown Temple.

C. A. 280a; 852a]

759.

Per dodici gradi di scale al magno tempio si saliva, il quale otto cento braccia circondava, e con ottāgulare ²figura era fabricato, e sopra li otto anguli otto gran base si posauano a un braccio e mezzo, e grosse 3, ³e lunghe 6 nel suo sodo, col l'angolo in mezzo, sopra delle quali si fondauano 8 grā pilastri: sopra del sodo della basa si le⁴vava per ispatio di 24 braccia, e nel suo termine erano stabiliti 8 capitelli di 3 braccia l'uno, e largo 6, sopra di questi se⁵guiva architraue fregio e cornice con altezza di 4 braccia e $\frac{1}{2}$, il quale per retta linea ⁶dall'un pilastro all'altro s'astendea, e così con circuito d'otto cento braccia il tempio circondava infra l' ⁷ pilastro e l'altro; per sostentacolo di tal mēbro erano stabiliti dieci gran colone dell' altezza de' pilastri e cō ⁸ grossezza di 3 braccia sopra le base, le quali erā alte vn braccio e $\frac{1}{2}$.

⁹Salivasi a questo tempio per 12 gradi di scale, il quale tempio era sopra il dodicesimo grado fondato in figura ottan¹⁰golare, e sopra ciascuno angulo nasceva vn gran pilastro; e infra li pilastri erano inframessi ¹¹dieci

Twelve flights of steps led up to the great temple, which was eight hundred braccia in circumference and built on an octagonal plan. At the eight corners were eight large plinths, one braccia and a half high, and three wide, and six long at the bottom, with an angle in the middle; on these were eight great pillars, standing on the plinths as a foundation, and twenty four braccia high. And on the top of these were eight capitals three braccia long and six wide, above which were the architrave frieze and cornice, four braccia and a half high, and this was carried on in a straight line from one pillar to the next and so, continuing for eight hundred braccia, surrounded the whole temple, from pillar to pillar. To support this entablature there were ten large columns of the same height as the pillars, three braccia thick above their bases which were one braccia and a half high.

The ascent to this temple was by twelve flights of steps, and the temple was on the twelfth, of an octagonal form, and at each angle rose a large pillar; and between the pillars were placed ten columns of the

759. 1. di sala al . . . otāgulare. 2. posaua alte v br e mezo. 3. ellungha . . . collangholo imezo . . . fondaua. 4. ne di 24 br e . . . era stabilito . . . di 3 br . luno . . . V. Palace architecture.

But a small number of Leonardo's drawings refer to the architecture of palaces, and our knowledge is small as to what style Leonardo might have adopted for such buildings.

Pl. CII No. 1 (W. XVIII). A small portion of a façade of a palace in two stories, somewhat resembling Alberti's Palazzo Rucellai.—Compare with this Bramante's painted front of the Casa Silvestri, and a painting by Montorfano in San Pietro in Gessate at Milan, third chapel on the left hand side and also with Bramante's palaces at Rome. The pilasters with arabesques, the rustica between them, and the figures over the window may be painted or in sgraffito. The original is drawn in red chalk.

Pl. LXXXI No. 1 (MS. Tr. 42). Sketch of a palace with battlements and decorations, most likely graffiti; the details remind us of those in the Castello at Vigevano.¹

MS. Mz. o^u, contains a design for a palace or house with a loggia in the middle of the first story, over which rises an attic with a Pediment reproduced on page 67. The details drawn close by on the left seem to indicate an arrangement of coupled columns against the wall of a first story.

Pl. LXXXV No. 14 (MS. S. K. M. III 79^a) contains a very slight

¹ Count GIULIO PORRO, in his valuable contribution to the Archivio Storico Lombardo, Anno VIII, Fasc. IV (31 Dec. 1881): Leonardo da Vinci, Libro di Annotazioni e Memorie, refers to this in the following note: "Alla pag. 41 vi è uno schizzo di volta ed accanto scrisse: 'il pilastro sarà carico in su 6' e potrebbe darsi che si riferisse alla cupola della chiesa delle Grazie tanto più che a pag. 42 vi è un disegno che rassomiglia assai al basamento che oggi si vede nella parte esterna del coro di quella chiesa." This may however be doubted. The drawing, here referred to, on page 41 of the same manuscript, is reproduced on Pl. C No. 4 and described on page 61 as being a study for the cupola of the Duomo of Milan.

sketch in red chalk, which most probably is intended to represent the façade of a palace. Inside is the short note 7 he 7 (7 and 7).

MS. J² 8^a (see pages 68 Fig. 1 and 2) contains a view of an unknown palace. Its plan is indicated at the side.

In MS. Br. M. 126^a (see Fig. 3 on page 68) there is a sketch of a house, on which Leonardo notes: casa con tre terrazi (house with three terraces).

Pl. CX, No. 4 (MS. L. 36^b) represents the front of a fortified building drawn at Cesena in 1502 (see No. 1040).

Fig. 2.

Fig. 1.

Fig. 3.

Here we may also mention the singular building in the allegorical composition represented on Pl. LVIII in Vol. I. In front of it appears the head of a sphinx or of a dragon which seems to be carrying the palace away.

The following texts refer to the construction of palaces and other buildings destined for private use:

W. XIX]

760.

La corte de' auere le parieti ²per l'altezza la metà della sua ³larghezza, cioè se la corte ⁴sarà braccia 40, la casa deve essere ⁵alta 20 nelle parieti di tal ⁶corte, e tal corte vol essere ⁷larga per la metà di tutta la ⁸facciata.

In the courtyard the walls must be half the height of its width, that is if the court be 40 braccia, the house must be 20 high as regards the walls of the said courtyard; and this courtyard must be half as wide as the whole front.

760. 1. pariete. 2. lalteza. 3. larghezza coe sella. 4. br 40. la casa e essere. 5. alte . . pariete. 6. volersere. 7. faccata.

760. See Pl. CI, no. 1, and compare the dimensions here given, with No. 748 lines 26—29; and the drawing belonging to it Pl. LXXXI, no. 2.

PER FARE VNA POLITA STALLA.

²Modo · come · si de' · componere · vna · stalla: Dividerai in prima la sua larghezza · in parti · 3 · e la sua lunghezza è libera ·, e le · 3 · dette divisioni ⁴sieno equali e di larghezza di braccia 6 per ciascuna, e alte 10, e la parte di mezzo ⁵sia in uso · de' maestri di stalla ·, le 2 da cāto per i cavagli, de' quali ciascuno ne de' ⁶ pigliare per larghezza braccia 6 ·, lūghezza braccia 6, e alte piv dinanti · che dirieto · ⁷1/2 · braccio; ⁷la mangiatoia sia alta da terra braccia 2, il principio della rastrelliera ⁸braccia · 3 · e l'ultimo · braccia 4 ·; Ora · a volere atenere · quello ch'io prometto, cioè di ⁹fare detto sito cōtro allo universale vso · pulito e netto · inquāto al · di sopra ¹⁰della stalla ·, cioè dove sta il fieno ·, deve detto loco avere nella sua testa di fori vna ¹¹finestra alta 6 · e larga 6, donde con vn facil modo si cōduca il fieno su detto ¹²solaro, come appare nello strumēto *E* ·, e sia collocata ī un sito di larghez¹³za di braccia 6, e lungo quāto la stalla, come appare in ·*k*·*p*· e l'altre 2 parti ¹⁴che mettano in mezzo · questa ·, ciascuna sia diuisa in 2 parti, le dua diverso il fieno sia ¹⁵no braccia 4 ·, *p* · *s* ·, solo allo ofitio e andamento de' ministri d'essa stalla, l'altre ¹⁶2 che confinano colle pareti murali · sieno di braccia 2, come appare in *s* · *k* ·, ¹⁷e queste sieno allo ofitio di dare · il feno alle māgiatoie · per condotti stretti nel ¹⁸principio e larghi sulle māgiatoie, acciò che'l feno nō si fermi infra via, sieno ¹⁹bene itonicati e polito, figurati dov'è segnato *f* · *s* ·; in quanto al dare ²⁰bere siano le māgiatoie di pietra, sopra le quali sia l'acqua, si chè si possino ²¹scoprire le māgiatoie come si scoprono le casse, alzādo i coperchi loro.

FOR MAKING A CLEAN STABLE.

The manner in which one must arrange a stable. You must first divide its width in 3 parts, its depth matters not; and let these 3 divisions be equal and 6 braccia broad for each part and 10 high, and the middle part shall be for the use of the stablemasters; the 2 side ones for the horses, each of which must be 6 braccia in width and 6 in length, and be half a braccio higher at the head than behind. Let the manger be at 2 braccia from the ground, to the bottom of the rack, 3 braccia; and the top of it 4 braccia. Now, in order to attain to what I promise, that is to make this place, contrary to the general custom, clean and neat: as to the upper part of the stable, i. e. where the hay is, that part must have at its outer end a window 6 braccia high and 6 broad, through which by simple means the hay is brought up to the loft, as is shown by the machine *E*; and let this be erected in a place 6 braccia wide, and as long as the stable, as seen at *k p*. The other two parts, which are on either side of this, are again divided; those nearest to the hay-loft are 4 braccia, *p s*, and only for the use and circulation of the servants belonging to the stable; the other two which reach to the outer walls are 2 braccia, as seen at *s k*, and these are made for the purpose of giving hay to the mangers, by means of funnels, narrow at the top and wide over the manger, in order that the hay should not choke them. They must be well plastered and clean and are represented at *4 f s*. As to the giving the horses water, the troughs must be of stone and above them [cisterns of] water. The mangers may be opened as boxes are uncovered by raising the lids.

VI. Studies of architectural details.

Several of Leonardo's drawings of architectural details prove that, like other great masters of that period, he had devoted his attention to the study of the proportion of such details. As every organic being in nature has its law of construction and growth, these masters endeavoured, each in his way, to discover and prove a law of proportion in architecture. The following notes in Leonardo's manuscripts refer to this subject.

Fig. 1.

The plinth must be as broad as the thickness of the wall against which the plinth is built.

C. A. 318 a; 961 a]

766.

I nostri antichi architettori cominciando in prima dagli Egitti, i quali se cōdo che descrive Diodoro Siculo ²furō i primi edificatori e componitori di città grandissime e di castelli ed edifizj publici e privati di forma, grandezza ³e qualità per le quali i loro antecēdēti riguardevoli con stupefazione e meraviglia ⁴le eleuate e grandissime macchine parēdo loro

⁵La colonna ch'è la sua grossezza nel terzo . . . ⁶quella che fusse sottile nel mezzo ronperassi nelle. . ; ⁷quella ch'è di pari grossezza e di pari fortezza è migliore per l'edifizio, ⁸seconda di bontà sarà quella ch'è la maggior grossezza dov' ella si cōgiovgnie colla ⁹basa.

The ancient architects beginning with the Egyptians (?) who, as Diodorus Siculus writes, were the first to build and construct large cities and castles, public and private buildings of fine form, large and well proportioned

The column, which has its thickness at the third part The one which would be thinnest in the middle, would break . . . ; the one which is of equal thickness and of equal strength, is better for the edifice. The second best as to usefulness will be the one whose greatest thickness is where it joins with the base.

764. 1. toro superio . . super. 2. nexstroli. 3. troclea. 5. inferior . . iferi. 6. [plato] plinto.

765. 2. [il muro]. 3. illatastro debbe. 4. [g] largo. 5. grossezza di quā⁶a". 7. latastro. 8. poggia.766. 1.—. *written from left to right.* 1. nosstri . . otalecine chomīciando . . dagliitū . . sechōdo . . desscriue . . sicholo. 2. edi' fichatori e chomponitori di cita . . chasstella. 4. grandeza . . anticiedēti [gesturessani che] righuardevoli chonnustupefazione . . loro; here the text breaks off. 5. cholonna . . groseza terzo qui . ve ana aroper se (?) 6. . . mezo . . nelle 2 ispasia.

764. No explanation can be offered of the meaning of the letter B, which precedes each name. It may be meant for *basa* (base). Perhaps it refers to some author on architecture or an architect (Bramante?) who employed the designations, thus marked for the mouldings.

³. *troclea*. Philander: *Trochlea sive trochalia aut rechanum*.

6. *Laterculus* or *latastrum* is the Latin name for *Plinthus* (πλίνθος), but Vitruvius adopted this Greek name and "latastro" seems to have been little

in use. It is to be found besides the text given above, as far as I am aware, only on two drawings of the Uffizi Collection, where, in one instance, it indicates the *abacus* of a Doric capital.

765. See Pl. CX No. 3. The hasty sketch on the right hand side illustrates the 'unsatisfactory' effect produced when the plinth is narrower than the wall.

766. See Pl. CIII, No. 3, where the sketches belonging to lines 10—16 are reproduced, but reversed. The sketch of columns, here reproduced by a wood cut, stands in the original close to lines 5—8.

¹⁰Il capitello à a essere j questo formato, dividi la sua grossezza da capo j 8 d' ū piè ¹¹e fa ché sia alto $\frac{5}{7}$ e ver- rà a essere quadro, dipoi dividi l'altezza j 8, come facesti la colonna, di poi poni $\frac{1}{8}$ l'uovolo ¹²e un altro ottavo la grossezza della tavola che sta di sopra al capitello; ¹³i corni della tavola del capitello àno a sportare fuori dalla maggior larghezza della cāpana $\frac{2}{7}$ ¹⁴ cioè settimi del di sopra della cāpana che tocca a ciascū corno di sporto $\frac{1}{7}$. ¹⁵e la mozzatura de' corni vuole essere larga quat' è alta, cioè $\frac{1}{8}$; j resto degli ornāmēti lascio ¹⁶jn libertà degli scultori; ¹⁷ma per tornare alle colonne, e provare la ragione secondo la forma di lor fortezza ¹⁸o debolezza, dico così, che quādo le linie si partiranno dalla sommità della ¹⁹colonna e termineranno nel suo nascimēto e la lor uia e lūghezza sia di pari ²⁰distanzia o latitudine, dico che questa colonna

The capital must be formed in this way. Divide its thickness at the top into 8; at the foot make it $\frac{5}{7}$, and let it be $\frac{5}{7}$ high and you will have a square; afterwards divide the height into 8 parts as you did for the column, and then take $\frac{1}{8}$ for the echinus and another eighth for the thickness of the abacus on the top of the capital. The horns of the abacus of the capital have to project beyond the greatest width of the bell $\frac{2}{7}$, i.e. sevenths of the top of the bell; so $\frac{1}{7}$ falls to the projection of each horn. The truncated part of the horns must be as broad as it is high. I leave the rest, that is the ornaments, to the taste of the sculptors. But to return to the columns and in order to prove the reason of their strength or weakness according to their shape, I say that when the lines starting from the summit of the column and ending at its base and their direction and length . . . , their distance apart or width may be equal; I say that this column

767. Leonardo wrote these lines on the margin of a page of the Trattato di Francesco di Giorgio, where there are several drawings of columns, as well as a head drawn in profile inside an outline sketch of a capital.

768. See Pl. LXXXV, No. 16. In the original the drawing and writing are both in red chalk.

VOL. II.

K

Pl. LXXXV No. 6 (MS. Ash. II 6^b) contains a small sketch of a capital with the following note, written in three lines: I chorni del capitulo, deono essere la quarta parte d'uno quadro (The horns of a capital must measure the fourth part of a square).

MS. S. K. M. III 72^b contains two sketches of ornamentations of windows.

In MS. C. A. 308^a; 938^a (see Pl. LXXXII No. 1) there are several sketches of columns. One of the two columns on the right is similar to those employed by Bramante at the Canonica di S. Ambrogio. The same columns appear in the sketch underneath the plan of a castle. There they appear coupled, and in two stories one above the other. The archivolts which seem to spring out of the columns, are shaped like twisted cords, meant perhaps to be twisted branches. The walls between the columns seem to be formed out of blocks of wood, the pedestals are ornamented with a reticulated pattern. From all this we may suppose that Leonardo here had in mind either some festive decoration, or perhaps a pavilion for some hunting place or park. The sketch of columns marked "35" gives an example of columns shaped like candelabra, a form often employed at that time, particularly in Milan, and the surrounding districts for instance in the Cortile di Casa Castiglione now Silvestre, in the cathedral of Como, at Porta della Rana &c.

769. The text is incomplete in the original.

The Proportions of the stories of a building are indicated by a sketch in MS. S. K. M. II² 11^b (see Pl. LXXXV No. 15). The measures are written on the left side, as follows: br 1¹/₂—6³/₄—br 1¹/₂—2 br—9 e 1¹/₂—1¹/₂—br 5—ō 9—ō 3 [br = braccia; ō = oncie].

Pl. LXXXV No. 13 (MS. B. 62^a) and Pl. XCIII No. 1. (MS. B. 15^a) give a few examples of arches supported on piers.

Handwritten text in a cursive script, possibly a form of shorthand or a specific dialect, arranged in several lines. The text is written in a slanted, somewhat irregular manner. To the right of the text, there are two small sketches of architectural elements, one of which appears to be a window or a doorway.

XIII.

Theoretical writings on Architecture.

Leonardo's original writings on the theory of Architecture have come down to us only in a fragmentary state; still, there seems to be no doubt that he himself did not complete them. It would seem that Leonardo entertained the idea of writing a large and connected book on Architecture; and it is quite evident that the materials we possess, which can be proved to have been written at different periods, were noted down with a more or less definite aim and purpose. They might all be collected under the one title: "Studies on the Strength of Materials". Among them the investigations on the subject of fissures in walls are particularly thorough, and very fully reported; these passages are also especially interesting, because Leonardo was certainly the first writer on architecture who ever treated the subject at all. Here, as in all other cases Leonardo carefully avoids all abstract argument. His data are not derived from the principles of algebra, but from the laws of mechanics, and his method throughout is strictly experimental.

Though the conclusions drawn from his investigations may not have that precision which we are accustomed to find in Leonardo's scientific labours, their interest is not lessened. They prove at any rate his deep sagacity and wonderfully clear mind. No one perhaps, who has studied these questions since Leonardo, has combined with a scientific mind anything like the artistic delicacy of perception which gives interest and lucidity to his observations.

I do not assert that the arrangement here adopted for the passages in question is that originally intended by Leonardo; but their distribution into five groups was suggested by the titles, or headings, which Leonardo himself prefixed to most of these notes. Some of the longer sections perhaps should not, to be in strict agreement with this divi-

sion, have been reproduced in their entirety in the place where they occur. But the comparatively small amount of the materials we possess will render them, even so, sufficiently intelligible to the reader; it did not therefore seem necessary or desirable to subdivide the passages merely for the sake of strict classification.

The small number of chapters given under the fifth class, treating on the centre of gravity in roof-beams, bears no proportion to the number of drawings and studies which refer to the same subject. Only a small selection of these are reproduced in this work since the majority have no explanatory text.

I.

ON FISSURES IN WALLS.

Br. M. 157a]

770.

Fa prima il trattato delle cause gieneratrici del²le rotture de' muri, e poi il trattato de'rimedi separato.

First write the treatise on the causes of the giving way of walls and then, separately, treat of the remedies.

³Li fessi paralleli sono vniversalmēte generati ⁴in quelli edifiti che si edificano in lochi montuosi, li ⁵quali sien cōposti di pietre faldate con obbliquo ⁶faldamēto, e perchè in tale obbliquità spesso penetra ⁷acqua e altra vmidità portatrice di cierta terra ⁸vntuosa e sdruciolante, e perchè tali falde nō sono ⁹continueate insino al fondo delle valli, ¹⁰tali pietre si muovono per la loro obli¹¹quità e mai termināo il moto insin ¹²che discendono al fondo della valle, ¹³portando con seco a vso di barca ¹⁴quella parte dello edifitio che per lo¹⁵ro si separa dal suddetto rimanēte;

Parallel fissures constantly occur in buildings which are erected on a hill side, when the hill is composed of stratified rocks with an oblique stratification, because water and other moisture often penetrates these oblique seams carrying in greasy and slippery soil; and as the strata are not continuous down to the bottom of the valley, the rocks slide in the direction of the slope, and the motion does not cease till they have reached the bottom of the valley, carrying with them, as though in a boat, that portion of the building which is separated by them from the rest. The remedy for this is always to build thick piers under the wall which is slipping, with arches from one to another, and with a good scarp and let the piers have a firm foundation in the strata so that they may not break away from them.

¹⁶Il rimedio di questo è il fondare spes¹⁷si pilastri sotto il muro che si move, ¹⁸e con archi dall'uno all'altro e be¹⁹ne abbarbicati, e questi tali ²⁰pilastri sieno funda²¹ti e fermi ²²nelle falde le quali non sieno rotte;

In order to find the solid part of these strata, it is necessary to make a shaft at the foot of the wall of great depth through the strata; and in this shaft, on the side from which the hill slopes, smooth and flatten a

²³Per trovare la parte stabile delle sopra dette falde è neciessario fare vn ²⁴pozzo sotto il piè del muro cō grā profondità infra esse falde ²⁵e di tal pozzo pulirne cō piana superfitie la larghezza d'un palmo

771. Lines 1—5 refer to Pl. CV, No. 2.

Line 9 *alle due anteciedēte*, see on the same page.

Lines 16—18. The translation of this is doubt-

space one palm wide from the top to the bottom; and after some time this smooth portion made on the side of the shaft, will show plainly which part of the hill is moving.

771.

The cracks in walls will never be parallel unless the part of the wall that separates from the remainder does not slip down.

WHAT IS THE LAW BY WHICH BUILDINGS HAVE STABILITY.

The stability of buildings is the result of the contrary law to the two former cases. That is to say that the walls must be all built up equally, and by degrees, to equal heights all round the building, and the whole thickness at once, whatever kind of walls they may be. And although a thin wall dries more quickly than a thick one it will not necessarily give way under the added weight day by day and thus, [16] although a thin wall dries more quickly than a thick one, it will not give way under the weight which the latter may acquire from day to day. Because if double the amount of it dries in one day, one of double the thickness will dry in two days or thereabouts; thus the small addition of weight will be balanced by the smaller difference of time [18].

The adversary says that *a* which projects, slips down.

And here the adversary says that *r* slips and not *e*.

HOW TO PROGNOSTICATE THE CAUSES OF CRACKS IN ANY SORT OF WALL.

The part of the wall which does not slip is that in which the obliquity projects and overhangs the portion which has parted from it and slipped down.

ON THE SITUATION OF FOUNDATIONS AND IN WHAT PLACES THEY ARE A CAUSE OF RUIN.

When the crevice in the wall is wider at the top than at the bottom, it is a manifest sign, that the cause of the fissure in the wall is remote from the perpendicular line through the crevice.

ful, and the meaning in any case very obscure.

Lines 19—23 are on the right hand margin close to the two sketches on Pl. CII, No. 3.

⁵¹2^a ¶ E ogni cosa umi⁵²da si restringne
nel⁵³lo asciugare per tā⁵⁴to quanto è l' umido
⁵⁵che da lei si diuide. ¶

OF CRACKS IN WALLS, WHICH ARE WIDE AT
THE BOTTOM AND NARROW AT THE TOP AND
OF THEIR CAUSES.

That wall which does not dry uniformly
in an equal time, always cracks.

A wall though of equal thickness will
not dry with equal quickness if it is not
everywhere in contact with the same
medium. Thus, if one side of a wall were
in contact with a damp slope and the other
were in contact with the air, then this latter
side would remain of the same size as before;
that side which dries in the air will shrink
or diminish and the side which is kept damp
will not dry. And the dry portion will break
away readily from the damp portion because
the damp part not shrinking in the same pro-
portion does not cohere and follow the move-
ment of the part which dries continuously.

OF ARCHED CRACKS, WIDE AT THE TOP, AND
NARROW BELOW.

Arched cracks, wide at the top and
narrow below are found in walled-up
doors, which shrink more in their height
than in their breadth, and in proportion as
their height is greater than their width,
and as the joints of the mortar are
more numerous in the height than in the
width.

The crack diminishes less in *r o* than in
m n, in proportion as there is less material
between *r* and *o* than between *n* and *m*.

Any crack made in a concave wall is
wide below and narrow at the top; and this
originates, as is here shown at *b c d*, in
the side figure.

DELLA CAUSA DEL RONPERE DELLI EDIFITI
PUBBLICI E PRIVATI.

²Romponsi li muri per fessure, che àno del diretto e alcune che ³àno dello obbliquo; le rotture che àno del diretto ⁴son gienerate dalli muri novi ⁵in cōgiutiō de' muri vecchi dritti o cō morse giūte alli ⁶muri vecchi, perchè tali morse, nō potendo resistere allo ⁷insopportabile peso del muro a lor' cōgiūto, è necies ⁸sario a quelle ronpersi e dar loco al disciēso del predet⁹to muro novo, il quale cala vn braccio per ogni 10 braccia, o più ¹⁰o meno, secondo la maggiore o minore soḿa di calcina ¹¹interposta infra le pietre murate e cō calcina più ¹²o mē liquida; E nota che senpre si debbe iprima fare ¹³li muri e poi vestirli delle pietre che li àno a vestire, ¹⁴perchè se così nō si facesse, il muro faciēdo maggiore calo che ¹⁵la crosta di fori, e' sarebbe neciessario che le morse fatte ¹⁶nelli lati de' muri si rōpessino; perchè le pietre che vestono li mu¹⁷ri, essendo di maggiore grandezza che le pietre da quel¹⁸le vestite, è neciessario che ricievinō minor quātità di calcina ¹⁹nelle loro comessure e per cōseguēza faccino minore calo, ²⁰il che accadere nō può, essendo murate tali croste poi ch'el mu²¹ro è secco.

²²*a b* muro nuo²³vo, *c* è muro vecchio ²⁴che già à fatto il calo, ²⁵e lo *a · b* fa il calo poi, ²⁶bēchè *a*, essēdo fonda²⁷to sopra il *c* muro ²⁸vecchio, nō si può in nes²⁹sū modo rōpere per ave³⁰re stabile fondamēto ³¹sopra del muro ve³²chio, ma sol si ronpe³³rà il rimanēte del mu³⁴ro nvovo *b* cō³⁵sciosia ch'elli è murato di ³⁶sopra dalla sommità del edifitio insino al fondo, ³⁷facciēdo il rimanēte del muro nuovo beccatello ³⁸sopra il muro che disciēde.

OF THE CAUSES OF FISSURES IN [THE WALLS
OF] PUBLIC AND PRIVATE BUILDINGS.

The walls give way in cracks, some of which are more or less vertical and others are oblique. The cracks which are in a vertical direction are caused by the joining of new walls, with old walls, whether straight or with indentations fitting on to those of the old wall; for, as these indentations cannot bear the too great weight of the wall added on to them, it is inevitable that they should break, and give way to the settling of the new wall, which will shrink one braccio in every ten, more or less, according to the greater or smaller quantity of mortar used between the stones of the masonry, and whether this mortar is more or less liquid. And observe, that the walls should always be built first and then faced with the stones intended to face them. For, if you do not proceed thus, since the wall settles more than the stone facing, the projections left on the sides of the wall must inevitably give way; because the stones used for facing the wall being larger than those over which they are laid, they will necessarily have less mortar laid between the joints, and consequently they settle less; and this cannot happen if the facing is added after the wall is dry.

a b the new wall, *c* the old wall, which has already settled; and the part *a b* settles afterwards, although *a*, being founded on *c*, the old wall, cannot possibly break, having a stable foundation on the old wall. But only the remainder *b* of the new wall will break away, because it is built from top to bottom of the building; and the remainder of the new wall will overhang the gap above the wall that has sunk.

DELLE PIETRE CHE SI DIS²GIUGONO DALLA LOR
CALCINA.

OF STONES WHICH DISJOIN THEMSELVES FROM
THEIR MORTAR.

³Le pietre d'equal numero nella loro
altezza, mu⁴rate con equal quãtità di calcina,
fãno equal ⁵calo nella partita dell'umido
che mollif⁶cò essa calcina.

Stones laid in regular courses from bottom
to top and built up with an equal quantity of
mortar settle equally throughout, when the
moisture that made the mortar soft evaporates.

⁷Per lo passato si prvova che la poca
quãtità ⁸del muro nuovo interposta infra
A · *n* farà po⁹co calo rispetto alla quãtità
del medesimo mu¹⁰ro che s'interpone infra
c *d*, e tal fia la pro¹¹portione che ànno in-
fra loro le raretà delle ¹²dette calcine qual'
è la proportiõe delli ¹³nvmeri over delle
quãtità delle calcine interpo¹⁴ste nelle cõmes-
sure delle pietre murate so¹⁵pra le varie
altezze delli muri vecchi.

By what is said above it is proved that
the small extent of the new wall between *A* and
n will settle but little, in proportion to the
extent of the same wall between *c* and *d*.
The proportion will in fact be that of
the thinness of the mortar in relation to
the number of courses or to the quantity
of mortar laid between the stones above the
different levels of the old wall.

This wall will break under the arch *e f*,
because the seven whole square bricks are
not sufficient to sustain the spring of the
arch placed on them. And these seven
bricks will give way in their middle
exactly as appears in *a b*. The reason
is, that the brick *a* has above it only
the weight *a k*, whilst the last brick under
the arch has above it the weight *c d x a*.

ON FISSURES IN NICHES.

Br. M. 158a]

777.

DELLE ROTTURE DELLI NICHÌ.

²L'arco fatto del semicircolo, il quale fia carico nelli ³due oppisiti terzi della sua curvità, rōperà in ⁴cinque lochi della sua curvità; provasi e sieno li pe^si *n m*, li quali rompono esso arco *a · b · f*., dico per lo ⁶passato come *c a* stremi sono equalmēte aggravati dal peso *n*, ⁷seguita per la ⁵a che l'arco ronperà nella parte più remota dalle ⁸due potentie che lo premono, il quale è il mezzo *e*., e altre⁹tanto intēdo aver detto dell'arco opposito *d g b*; adū¹⁰que *n m* pesi vēgono a discēdere, e discēder nō posso¹¹no per la ⁷a che non si faccī più vicini, e avvicinar nō si pos¹²sono, se l'arco che infra lor s'interpone non avvicini li sua ¹³stremi, li quali nō si possono accostare senza rottura del ¹⁴suo mezzo; adūque l'arco si ronperà in ²lochi come fu primo ¹⁵possto ecc.

¹⁶Domāda del peso dato in *a*, che parte ne risponde *ī · n · f* linia, e cō che peso s' à a vinciere il peso posto in *f*.

An arch constructed on a semicircle and bearing weights on the two opposite thirds of its curve will give way at five points of the curve. To prove this let the weights be at *n m* which will break the arch *a, b, f*. I say that, by the foregoing, as the extremities *c* and *a* are equally pressed upon by the thrust *n*, it follows, by the ⁵th, that the arch will give way at the point which is furthest from the two forces acting on them and that is the middle *e*. The same is to be understood of

the opposite curve, *d g b*; hence the weights *n m* must sink, but they cannot sink by the ⁷th, without coming closer together, and they cannot come together unless the extremities of the arch between them come closer, and if these draw together the crown of the arch must break; and thus the arch will give way in two places as was at first said &c.

I ask, given a weight at *a* what counteracts it in the direction *n f* and by what weight must the weight at *f* be counteracted.

Br. M. 1418]

778.

DELLA DIMINUITIONE DE' CORPI VMIDI ²DI
GROSSEZZA O LARGHEZZA DIFFORME.

³La finestra *a* è causa della rottura del *b* e questa tal rottura è aumentata dal peso *n m*, il quale più si ficca ovvero penetra intra la terra che riceve il suo fondamento, che non fa la leuità del *b*; e ancora il fondamento vecchio che sta sotto *b* à fatto il calo, il che fatto non aveà li pilastri *n m* e la parte *b* non disciende perpendicolare, anzi si gitta infori per obliquo e non si può per l'avversario gittare in dentro, perchè tal parte disunita dal tutto è più larga di fuori che di dentro e li labri del rimanente ¹⁰e della medesima figura, e se tal parte disunita avesse a entrare in dentro, ¹¹il maggiore entrarebbe nel minore, il che sarebbe impossibile; adunque ¹²è concluso che per necessità la parte di tale emiciclo si disunisce dal tutto col ¹³gittarsi colla parte inferiore infori e non indietro come vole ¹⁴l'avversario ecc.

¹⁵Quando le tribune intere o mezze ¹⁶sarà di sopra vinte da superchio peso, allora le sue volte si apriranno ¹⁸cò apertura diminuitiva ¹⁹dalla parte di sopra e larga di sotto e stretta dalla parte di dentro e ²¹larga di fuori, a similitudine della ²²scorza del pomo ovvero mela ²³divisa in molte parti per la sua larghezza, ch'è quāto ella sarà premuta dal ²⁵le opposte parti della sua larghezza, ²⁶quella parte delle giuture più si aprirà, che fia più distante alla causa ²⁸che la prieme, e per questo mai si ²⁹debbono caricare li archi delle volte ³⁰di qualunque emiciclo dalli archi dello ³¹suo edificio massimo, perchè quel che ³²più pesa più prieme sopra ciò che li è ³³sotto, e più disciende sopra li suoi ³⁴fondamenti, il che intervenire non può ³⁵alle cose più lievi come sono li emicicli predetti.

ON THE SHRINKING OF DAM BODIES OF
DIFFERENT THICKNESS AND WIDTH.

The window *a* is the cause of the crack at *b*; and this crack is increased by the pressure of *n* and *m* which sink or penetrate into the soil in which foundations are built more than the lighter portion at *b*. Besides, the old foundation under *b* has already settled, and this the piers *n* and *m* have not yet done. Hence the part *b* does not settle down perpendicularly; on the contrary, it is thrown outwards obliquely, and it cannot on the contrary be thrown inwards, because a portion like this, separated from the main wall, is larger outside than inside and the main wall, where it is broken, is of the same shape and is also larger outside than inside; therefore, if this separate portion were to fall inwards the larger would have to pass through the smaller—which is impossible. Hence it is evident that the portion of the semicircular wall when disunited from the main wall will be thrust outwards, and not inwards as the adversary says.

When a dome or a half-dome is crushed from above by an excess of weight the vault will give way, forming a crack which diminishes towards the top and is wide below, narrow on the inner side and wide outside; as is the case with the outer husk of a pomegranate, divided into many parts lengthwise; for the more it is pressed in the direction of its length, that part of the joints will open most, which is most distant from the cause of the pressure; and for that reason the arches of the vaults of any apse should never be more loaded than the arches of the principal building. Because that which weighs most, presses most on the parts below, and they sink into the foundations; but this cannot happen to lighter structures like the said apses.

Handwritten text in a cursive script, located to the right of the pulley diagram.

Handwritten text in a cursive script, located at the bottom right of the page.

³⁷Qual di questi due cubi dimi³⁸nuirà più vniformemēte, o ³⁹il cubo *A* posato sopra il pavimēto, o'l cubo *b* sospeso ⁴¹infra l'aria, essēdo l'uno ⁴²e l'altro cubo equali in peso ⁴³e in quantità e di terra mista ⁴⁴con equale vmidità? —

⁴⁵Quel cubo che si posa sopra ⁴⁶il pavimēto più diminui⁴⁷scie della sua altezza che per la ⁴⁸sua larghezza, il che ⁴⁹far nō può il cubo ch'è di ⁵⁰sopra e sospeso infra l'aria; ⁵¹pruovasi così; il cubo po⁵²sato sopra questa medesima ⁵³sta meglio qui di sotto.

⁵⁴Il fine delli dua cilindri di ⁵⁵terra fresca cioè *a*, *b* sa⁵⁶rà le figure piramidali di ⁵⁷sotto *c*, *d* || provasi co⁵⁸si: il cilindro *a*, posato ⁵⁹sopra il suo pavimēto per esse⁶⁰re lui di terra assai mista ⁶¹coll'umido, va calādo me⁶²dante il suo peso che da di se ⁶³alla sua basa, e tāto più ca⁶⁴lerà e ingrosserà, quāto e' sa⁶⁵rà colle sua parti più presso ⁶⁶alla sua basa, perchè lì si cari⁶⁷ca il suo tutto ecc; E si⁶⁸mile farà il peso *b*, il quale pi⁶⁹ù s'astēderà, quāto elli à maggi⁷⁰or peso sotto se, la qual maggiorità ⁷¹è ne' cōfini del suo sostētaculo.

Which of these two cubes will shrink the more uniformly: the cube *A* resting on the pavement, or the cube *b* suspended in the air, when both cubes are equal in weight and bulk, and of clay mixed with equal quantities of water?

The cube placed on the pavement diminishes more in height than in breadth, which the cube above, hanging in the air, cannot do. Thus it is proved. The cube shown above is better shown here below.

The final result of the two cylinders of damp clay that is *a* and *b* will be the pyramidal figures below *c* and *d*. This is proved thus: The cylinder *a* resting on block of stone being made of clay mixed with a great deal of water will sink by its weight, which presses on its base, and in proportion as it settles and spreads all the parts will be somewhat nearer to the base because that is charged with the whole weight, &c.; and the case will be the same with the weight of *b* which will stretch lengthwise in proportion as the weight at the bottom is increased and the greatest tension will be the neighbourhood of the weight which is suspended by it.

III.

ON THE NATURE OF THE ARCH.

A. 50a]

779.

CHE COSA È ARCO.

WHAT IS AN ARCH?

²Arco non è altro che una fortezza . cavsata da due debolezze, jpero³chè l'arco negli edifiti è cōposto di 2 quarti . di circolo, i quali ⁴quarti circuli, ciascuno debolissimo per se, desiderā cadere, e opponē⁵dosi alla ruina l'uno dell'altro de' due debolezze, si cōvertono in vni⁶ca fortezza.

The arch is nothing else than a force originated by two weaknesses, for the arch in buildings is composed of two segments of a circle, each of which being very weak in itself tends to fall; but as each opposes this tendency in the other, the two weaknesses combine to form one strength.

DELLA QUALITÀ DEL PESO DELLI ARCHI.

OF THE KIND OF PRESSURE IN ARCHES.

⁸Poichè l'arco fia . cōposto . , quello . rimane in equilibrio, jpero⁹chè tāto spīgie . l'uno . l'altro . quāto l'altro l'uno . , e se pesa piv l'uno ¹⁰quarto circolo . che l'altro . , quivi fia leuata e negata la permanēza, ¹¹imperochè 'l maggiore vīcierā . il minore peso.

As the arch is a composite force it remains in equilibrium because the thrust is equal from both sides; and if one of the segments weighs more than the other the stability is lost, because the greater pressure will outweigh the lesser.

DEL CARICO DATO AGLI ARCHI.

OF DISTRIBUTING THE PRESSURE ABOVE AN ARCH.

¹³Dopo il peso eguale de' quarti circuli è necessario dare loro eguale ¹⁴peso di sopra, altremēti si correbbe nel sopra . detto errore.

Next to giving the segments of the circle equal weight it is necessary to load them equally, or you will fall into the same defect as before.

779. 1. chosa e archo. 2. archo . . i forteza . . debolezze. 3. larcho . . chōposto . . circhuli. 4. circhuli ciascuno . debolisimo . . chadere eoaponē. 5. debolezze . . chōuertano. 6. cha forteza. 7. dela . . deli. 8. chōposto qelo . . equilibra. 9. chettāto . . esse e pesa. 10. circhulo . . premanēza. 11. magiore. 12. charicho dati ali. 13. circhuli. 14. chorerebe . . erore

DOVE L'ARCO SI RÔPE.

¹⁶L'arco si rôperà j̄ quella parte che passa il suo mezzo sotto il cietro.

WHERE AN ARCH BREAKS.

An arch breaks at the part which lies below half way from the centre.

SECÔDO RÔPIMETO DELL'ARCO.

¹⁸Se 'l superchio peso fia posto i mezzo l'arco nel puto *a*, quello desi¹⁹dera cadere in *b*, e ronpesi ne' $\frac{2}{3}$ della sua altezza in *c* *e*, ²⁰e tãto fia piú potête *g* *e* che *e* *a* quanto ²¹*m* *o* entra in *m* *n*.

SECOND RUPTURE OF THE ARCH.

If the excess of weight be placed in the middle of the arch at the point *a*, that weight tends to fall towards *b*, and the arch breaks at $\frac{2}{3}$ of its height at *c e*; and *g e* is as many times stronger than *e a*, as *m o* goes into *m n*.

D'UN ALTRA CAGIONE DI RUINA.

²³L'arco verrà ancora meno per essere sospito da traverso, inperò²⁴chê quãdo il carico nō si dirizza ai piè de l'arco, ²⁵l'arco poco dura.

ON ANOTHER CAUSE OF RUIN.

The arch will likewise give way under a transversal thrust, for when the charge is not thrown directly on the foot of the arch, the arch lasts but a short time.

A. 50 8]

780.

DELLA FORTEZZA DELL'ARCO.

²Il modo di fare l'arco permanēte si è a rienpiere i sua angoli di buono ripieno ³insino al suo raso overo culmine.

ON THE STRENGTH OF THE ARCH.

The way to give stability to the arch is to fill the spandrels with good masonry up to the level of its summit.

⁴DEL CARICARE SOPRA L'ARCO TÔDO.

ON THE LOADING OF ROUND ARCHES.

⁵DEL CARICARE L'ARCO ACUTO BENE.

ON THE PROPER MANNER OF LOADING THE POINTED ARCH.

²L'arco il quale māderà il peso perpedicu⁴lare alle sue radici ⁵farà il suo ofitio

The arch which throws its pressure perpendicularly on the abutments will fulfil

per ⁶qualūque verso si stia, ⁷o rovescio, o a giacere, ⁸o ritto.

its function whatever be its direction, upside down, sideways or upright.

⁹L'arco nō si rōperà se la corda del'arco di fori nō toccherà l'arco di dentro; ¹⁰Questo appare per isperiēza, chē ogni volta che la corda a·o·n dell'arco ¹¹di fori n·r·a toccherà l'arco di dentro ·x·b·y, l'arco darà pricipio a sua ¹²debolezza, e tāto si farà piv debole quāto l'arco di dētro rōperà dessa corda.

The arch will not break if the chord of the outer arch does not touch the inner arch. This is manifest by experience, because whenever the chord a o n of the outer arch n r a approaches the inner arch x b y the arch will be weak, and it will be weaker in proportion as the inner arch passes beyond that chord. When an arch is loaded only on one side the thrust will press on the top of the other side and be transmitted

DELLA POTĒTIA DELL'ARCO NELL'ARCHITETTURA.

²La permanēza dell'arco fabbricato dallo architetto con³siste nella corda e nelle spalle sue.

DELLA SITUATIONE DELLA CORDA NEL SOPRADETTO ARCO.

⁵La situatione della corda à eguale necessità nel principi⁶pio dell'arco, e nel fine della rettitudine del pilastro ⁷dove si posa; pruovasi per la ²a delli sostētaculi che dicie: ⁸Quella parte del sostentaculo manco resiste che è più remota dal fer⁹mamēto del suo tutto; adunque essendo la ¹⁰sōmità del pilastro vltima remotione d il suo fermamēto, e ¹¹si¹¹mile accadēdo nelli oppositi stremi dell'arco, che sono vlt¹¹tima distantia dal mezzo, suo vero fermamēto, noi abbiā con¹³cluso, che tal corda *a b* di neciessità richiede la situatione delli ¹⁴sua oppositi stremi infra li 4 oppositi stremi pre¹⁴detti;

¹⁵Dicie l'auersario che tale arco vole essere più che mezzo ¹⁶tondo, e allora non avrà bisogno di corda perchè tali stremi ¹⁷nō spignerāno infuori, ma indentro, come si di¹⁸mostra nello ecciesso *a · c · b · d*; Qui si risponde, tale ¹⁹inventione essere trista per 5 cause, e la prima è inquanto ²⁰alla fortezza, perchè è provato jl parallelo circ²¹colare, essendo cōposto di due semicirculi, sol rōpersi dove ²²tali semicirculi insieme si congiūgono, come mo²³stra la figura *n m*; oltre a di questo seguita, ch'egli è mag²⁴giore spatio infra li stremi del semicirculo che infra le pa²⁵rieti delli muri; terza è che ¹l peso posto per cōtro alla fortezza ²⁶dell'arco diminuisce tanto di peso, quāto le poste dell'arco ²⁷sono più larghe che detto spatio interposto infra li pilastri, ⁴a è ²⁸che li pilastri indeboliscono per tāto quāto la parte loro

ON THE STRENGTH OF THE ARCH IN ARCHITECTURE.

The stability of the arch built by an architect resides in the tie and in the flanks.

ON THE POSITION OF THE TIE IN THE ABOVE NAMED ARCH.

The position of the tie is of the same importance at the beginning of the arch and at the top of the perpendicular pier on which it rests. This is proved by the ²nd "of supports" which says: that part of a support has least resistance which is farthest from its solid attachment; hence, as the top of the pier is farthest from the middle of its true foundation and the same being the case at the opposite extremities of the arch which are the points farthest from the middle, which is really its [upper] attachment, we have concluded that the tie *a b* requires to be in such a position as that its opposite ends are between the four above-mentioned extremes.

The adversary says that this arch must be more than half a circle, and that then it will not need a tie, because then the ends will not thrust outwards but inwards, as is seen in the excess at *a c, b d*. To this it must be answered that this would be a very poor device, for three reasons. The first refers to the strength of the arch, since it is proved that the circular parallel being composed of two semicircles will only break where these semicircles cross each other, as is seen in the figure *n m*; besides this it follows that there is a wider space between the extremes of the semicircle than between the plane of the walls; the third reason is that the weight placed to counterbalance the strength of the arch diminishes in proportion as the piers of the arch are wider than the space between the piers. Fourthly in proportion as the parts at *c a b d* turn outwards, the piers are weaker to support the arch above them. The ⁵th is that all the material and weight of the

785. 1. dell'arco. 2. premanēza dell'arco fabbricato . . architettoch |||||. 3. chorda. 4. chorda . . arco. 3. chorda allaq^aa^a neciessita. 6. rectitudine del pilastro. 7. dovessi . . pella . . sostētachuli cheddicie. 8. sostentaculo mā. 9. iucto . . essendo [la sōmita delli] la. 10. somita . . pilasstro . . repotione. 11. achadēdo [nell'arco] nelli . . arco chessono . . chon. 13. chlusio chettal chorda "a b" di. 14. infralli . . predecū. 15. chettale arco. 16. ara . . chorda. 17. nō [gitte^rranno] inspignierāno . . indrēto. 18. mostra . . rispotala. 19. trissta per "5" [tre] chause ella . . e inq̄. 20. provato [larcho sol] jl. 21. chulare . . chōposto . . semice . . 22. semicrchuli . . chongiūghano . . mos. 23. figura . . quessto . . ema. 24. infralli . . semics . . infralle. 25. riete . . possto perchōtro. 26. arco diminuisce . . posste dell'arco. 27. e più larga . . interposto infralli pilastri |||||. 28. ||||| ellj pilastri indebolischano. 29. larcho . . la 5^a he. 30. chettutta.

c a ²⁹ *b d* si piegha indiriecto nel ritienere sopra di se l'arco; la 5^a è ³⁰ che tutta la spesa e 'l peso dell'arco che eccede il mezzo tondo ³¹ è inutile e dañoso, ed è qui da notare, che il peso ³² sopra posto all'arco rōperà cō più facilità l'arco in *a b* trouā³³ do la curuatura dell'ecciesso che al mezzo circulo s'agiugnie ³⁴ che essendo diriecto il pilastro insino al cōtatto del semicirculo.

arch which are in excess of the semicircle are useless and indeed mischievous; and here it is to be noted that the weight placed above the arch will be more likely to break the arch at *a b*, where the curve of the excess begins that is added to the semicircle, than if the pier were straight up to its junction with the semicircle [spring of the arch].

L'ARCO IL QUALE È CARICO SOPRA IL SUO MEZZO RŌPERÀ ³⁶ NEL SUO QUARTO DESTRO E SINISTRO.

AN ARCH LOADED OVER THE CROWN WILL GIVE WAY AT THE LEFT HAND AND RIGHT HAND QUARTERS.

³⁷ Prouasi per la 7^a di questo che dicie ³⁸ ¶ le opposite stremità delli sostētaculi sono equalmēte agra³⁹ vate dal peso che per lor si sospēde; adūque il peso dato in *f* si ⁴⁰ sēte in *b c* cioè mezzo per ciascuno stremo, e per la terza che dicie: ⁴¹ Quella parte del sostētacolo d'equal potētia più presto si rompe ⁴² che è più distante al suo fermamēto, òde seguita che ⁴³ per essere *d* equalmente distāte al *f e* ferma

This is proved by the 7th of this which says: The opposite ends of the support are equally pressed upon by the weight suspended to them; hence the weight shown at *f* is felt at *b c*, that is half at each extremity; and by the third which says: in a support of equal strength [throughout] that portion will give way soonest which is farthest from its attachment; whence it follows that *d* being equally distant from *f, e*

³⁵ Se l'armadura dell'ar³⁶ co nō cala insieme ³⁷ col calo dell'arco, la cal³⁸ cina nel seccarsi restri³⁹ gnie in se medesima e ⁴⁰ si spicca dall'ū de' matto⁴¹ ni, alli quali ella per col⁴² legarli è interpo⁴³ sta, e così li lascia dis⁴⁴ legati, per la qual co⁴⁵ sa la uolta resta disu⁴⁶ nita e le poggie in brie⁴⁷ ve la ruinano.

If the centering of the arch does not settle as the arch settles, the mortar, as it dries, will shrink and detach itself from the bricks between which it was laid to keep them together; and as it thus leaves them disjointed the vault will remain loosely built, and the rains will soon destroy it.

⁵Quando · il triägolo · $a z n$ ⁶calando caccia indiriato ·
⁷ $\frac{2}{3}$ di ciascuno
¹/₂ arco ⁸ cioè $a \cdot s$ · e
 così $z \cdot m$, ela ⁹ragiō
 si è che $a \cdot$
 piōba sopra $\cdot b$, ¹⁰e
 così $z \cdot$ sopra f .

When the triangle $a z n$, by settling, drives backwards the $\frac{2}{3}$ of each $\frac{1}{2}$ circle that is $a s$ and in the same way $z m$, the reason is that a is perpendicularly over b and so likewise z is above f .

¹¹Ciascuno $\frac{1}{2}$ · arco ·, sendo vinto · dal superchio · peso ·, si ronperà ne $\frac{2}{3}$ della ¹²sua · altezza ·, la quale · parte · risponde · per perpēdiculare · linea · sopra · il mezzo della sua ¹³basa · come · appare · in $\cdot a \cdot b$; E questo accade chē'l pe o · desidera cadere ¹⁴e passare pel · pūto · r ·; E s'egli desiderasse cōtra sua · natura cade¹⁵re dal pūto $\cdot s$ ·, l'arco $\cdot n \cdot s$ · si rōperebbe · nel suo · mezzo · appūto ¹⁶e se l'arco $\cdot n \cdot s$ · fusse d'ū solo legnio, il peso posto in $\cdot n$ · desidereb¹⁷be cadere in $\cdot m$ · e ronperebbesi in mezzo ¹⁸ $\frac{1}{2}$ · all'arco $e \cdot m$ ·, altremēti si rōperà nel terzo ¹⁸ di sopra nel pūto ¹⁹ a ·, perchē da $\cdot a \cdot n$ · ²⁰è l'arco · piv pia²¹no, che non è da ²² $a \cdot o$ · e che no²³n è da $o \cdot s$ ·; ²⁴e tanto · quāto ²⁵ $p \cdot t$ · è maggio²⁶re che $t \cdot n$ · ²⁷tanto fia piv for²⁸te $\cdot a \cdot o$ · che ²⁹non è $a \cdot n$ ·; ³⁰e similmete ³¹tanto fia piv ³²forte $\cdot s \cdot o$ · che ³³ $o \cdot a$ · quāto · ³⁴ $r \cdot p$ · fia maggi³⁵ore · che $p \cdot t$ ·.

³⁶Quel arco · che fia · raddoppiato · nella quadratura della sua · grossezza ³⁷regierà · quattro · tanti · peso quanto · regieva · lo scēpio ·, tanto · piv · ³⁸quanto · il diamitro della sua · grossezza · entra · mē numero · di uolte nella ³⁹sua · lunghezza, Cioè · se la · grossezza dell'arco sciēpio entra · 10 ⁴⁰volte nella sua · lūghezza, la grossezza · del arco duplicato · ēterà 5 volte ⁴¹nella · sua · lūghezza ·; Adūque entrādo la metà meno la grossezza de ⁴²l'arco · duplicato · nella sua · lunghezza · che nō fa quella de⁴³l'arco · sciēpio · nella sua ·, è ragionevol cosa che regga la metà piv ⁴⁴peso che nō gli toccherebbe, se fusse alla proportione dell'ar⁴⁵co · sciēpio; Onde essendo quest'arco duplicato per 4 volte la quā⁴⁶tità del'arco sciēpio, parrebbe che dovesse regiere⁴⁷ 4 tātī piv peso, ⁴⁷e la sopra detta regola dimostra che ne sostiene · 8 cotātī appūto.

Either half of an arch, if overweighted, will break at $\frac{2}{3}$ of its height, the point which corresponds to the perpendicular line above the middle of its bases, as is seen at $a b$; and this happens because the weight tends to fall past the point r .—And if, against its nature it should tend to fall towards the point s the arch $n s$ would break precisely in its middle. If the arch $n s$ were of a single piece of timber, if the weight placed at n should tend to fall in the line $n m$, the arch would break in the middle of the arch $e m$, otherwise it will break at one third from the top at the point a because from a to n the arch is nearer to the horizontal than from a to o and from o to s , in proportion as $p t$ is greater than $t n$, $a o$ will be stronger than $a n$ and likewise in proportion as $s o$ is stronger than $o a$, $r p$ will be greater than $p t$.

The arch which is doubled to four times of its thickness will bear four times the weight that the single arch could carry, and more in proportion as the diameter of its thickness goes a smaller number of times into its length. That is to say that if the thickness of the single arch goes ten times into its length, the thickness of the doubled arch will go five times into its length. Hence as the thickness of the double arch goes only half as many times into its length as that of the single arch does, it is reasonable that it should carry half as much more weight as it would have to carry if it were in direct proportion to the single arch. Hence as this double arch has 4 times the thickness of the single arch, it would seem that it ought to bear 4 times the weight; but by the above rule it is shown that it will bear exactly 8 times as much.

QUEL PILASTRO CHE FIA CARICO DI PIV DI-
SEGUALE ⁴⁹PESO VERRÀ PIV PRESTO AL MÀCO.

THAT PIER, WHICH IS CHARGED MOST UN-
EQUALLY, WILL SOONEST GIVE WAY.

⁵⁰La colonna *c · b* · per l'essere carica
d'eguale · somma fia · piv · perman-
nēte, ⁵¹e l'altre · 2 di fori · àno
bisogno di tãto peso dal loro
ciētro infori ⁵²quãt'è · dal loro ·
ciētro indētro · cioè dal ciētro
della colonna insino a mezzo l'arco.

The column *c b*, being charged with an
equal weight, [on each side] will be
most durable, and the other two out-
ward columns require on the part out-
side of their centre as much pressure
as there is inside of their centre,
that is, from the centre of the col-
umn, towards the middle of the arch.

⁵³Li archi che stano per forza di catene
nō fieno permanēti.

Arches which depend on chains for their
support will not be very durable.

L'ARCO · FIA DI PIV LŪGA PERPETUITÀ ·, IL
QUALE AVRÀ BONO · CONTRARIO AL SUO
SPĪGIERE.

THAT ARCH WILL BE OF LONGER DURATION
WHICH HAS A GOOD ABUTMENT OPPOSED TO
ITS THRUST.

⁵⁵L'arco per se desidera cadere, e se l'ar-
co fia 30 braccia e lo ìteruallo
ch'è infra i mvri ⁵⁶che lo so-
stēgono sia · 20 ·, noi sap-
piano che 30 nō passerà per
20, se 20 nō si ⁵⁷fa ancora
lui · 30 ·; òde sendo vinto
l'arco dal superchio · peso · si
dirizza e i mvri ⁵⁸male resitēti
l'aprono e dāno l'entrata in-
fra loro spatio alla ruina
del'arco; ⁵⁹Ma se tu nō uolessi mettere al-
l'arco la sua corda di ferro, li debbi fare
tali ⁶⁰spalle che facciano · resistētia al suo
spingere, la qual cosa · farai così : carica
⁶¹li angoli *m · n* · di pietrē che le linie delle
loro giunture se dirizzino al cietro ⁶²del
circulo del'arco, E la ragione, che sarà
l'arco permanēte, fia questa, Noi ⁶³sap-
piano chiaro che chi carica · l'arco nel
quarto suo · *a · b* di superchio peso che'l
⁶⁴muro · *f · g* · fia sospinto, perchè l'arco si
uorrà dirizzare; E chi caricasse l'altro
quarto ⁶⁵*b · c* · ch'eli tirerebbe il mvro ·
f · g · indētro, se nō fusse la linia delle
pietre ⁶⁶*x y* che fa sostegno.

The arch itself tends to fall. If the arch be
30 braccia and the interval be-
tween the walls which carry it
be 20, we know that 30 cannot
pass through the 20 unless 20
becomes likewise 30. Hence
the arch being crushed by the
excess of weight, and the walls
offering insufficient resistance,
part, and afford room between
them, for the fall of the arch.

But if you do not wish to strengthen the arch
with an iron tie you must give it such
abutments as can resist the thrust; and you
can do this thus: fill up the spandrels *m n*
with stones, and direct the lines of the joints
between them to the centre of the circle
of the arch, and the reason why this makes
the arch durable is this. We know very
well that if the arch is loaded with an ex-
cess of weight above its quarter as *a b*, the
wall *f g* will be thrust outwards because the
arch would yield in that direction; if the
other quarter *b c* were loaded, the wall *f g*
would be thrust inwards, if it were not for
the line of stones *x y* which resists this.

La sperienza che vn peso posto sopra vno arco nō si carica tutto sopra alle sua colon²ne, anzi quāto è maggior peso fraposto sopra l'archi, tanto mē pesa ³l'arco il peso alle colōne; la sperienza siè questa: sia messo vn omo ⁴sopra le stadere in mezzo la trōba d'uno pozzo; fa dipoi che questo allarghi le mani ⁵e piedi infra le parieti di detto pozzo, vedrai questo pesare alla stadera mol⁶to meno; da li vno peso alle spalle, uedrai per sperienza quāto maggior ⁷peso ti darà, maggiore forza farà in aprire le braccia e gambe, e piv pō⁸dare nelle parieti, e piv mācare il pōdo alle stadere.

An Experiment to show that a weight placed on an arch does not discharge itself entirely on its columns; on the contrary the greater the weight placed on the arches, the less the arch transmits the weight to the columns. The experiment is the following. Let a man be placed on a steel yard in the middle of the shaft of a well, then let him spread out his hands and feet between the walls of the well, and you will see him weigh much less on the steel yard; give him a weight on the shoulders, you will see by experiment, that the greater the weight you give him the greater effort he will make in spreading his arms and legs, and in pressing against the wall and the less weight will be thrown on the steel yard.

IV.

ON FOUNDATIONS, THE NATURE OF THE GROUND AND SUPPORTS.

Br. M. 138 a]

789.

La prima parte neciessarissima è la loro permanētia.

²Delli fondamēti che ànno le mēbrificazioni componi³trici delli tēpli e altri edifici publici, tal proporti⁴one deve essere da profondità a profondità quale ⁵è da peso a peso che scaricare si deve sopra essi mē⁶bri.

⁷Ogni parte della pro⁸fondità, che à la terra ⁹per alquāto spatio, è ¹⁰fatta a suoli, e o¹¹gni suolo è cōposto di ¹²parti, più grave ¹³e piv leue l'una chel'al¹⁴tra; nel profundarsi è più grave, e questo si prova, ¹⁵perchè questi tali soli sō cō¹⁷posti dalle turbulentic ¹⁶delle acque scaricate ī ¹⁸mare dal corso de' fiumi, ¹⁹che in quello versano, ²⁰delle quali turbulentic ²¹la parte più grave fu ²²quella che prima ²³si scaricò successiva²⁴mēte, e' questo fa l'ac²⁵qua, dov' ella si ferma, le²⁶vādo prima dove es²⁷sa si move; E di que²⁸sti tali soli di terra ²⁹si manifesta nelli lati ³⁰di fiumi che coi lor con³¹tinui corsi ànno secati ³²e partiti con grā pro³³fondità di tagli l'ū mō³⁴te dall'altro, doue per li ³⁵ghiajosi sōli l'acque so³⁶no scolate e per questo ³⁷la materia si è sec-

The first and most important thing is stability.

As to the foundations of the component parts of temples and other public buildings, the depths of the foundations must bear the same proportions to each other as the weight of material which is to be placed upon them.

Every part of the depth of earth in a given space is composed of layers, and each layer is composed of heavier or lighter materials, the lowest being the heaviest. And this can be proved, because these layers have been formed by the sediment from water carried down to the sea, by the current of rivers which flow into it. The heaviest part of this sediment was that which was first thrown down, and so on by degrees; and this is the action of water when it becomes stagnant, having first brought down the mud whence it first flowed. And such layers of soil are seen in the banks of rivers, where their constant flow has cut through them and divided one slope from the other to a great depth; where in gravelly strata the waters have run off, the ma-

remember, that the part built into the wall
 should be steeped in hot pitch and filleted
 with oak boards likewise so steeped. Each
 beam must pass through its walls and be
 secured beyond the walls with sufficient
 chaining, because in con-
 sequence of earthquakes
 the beams are often seen
 to come out of the walls
 and bring down the walls

and floors; whilst if they are chained they will
 hold the walls strongly together and the
 walls will hold the floors. Again I remind
 you never to put plaster over timber.
 Since by expansion and shrinking of
 the timber produced by damp and dryness
 such floors often crack, and once cracked
 their divisions gradually produce dust and
 an ugly effect. Again remember not to
 lay a floor on beams supported on arches;
 for, in time the floor which is made on
 beams settles somewhat in the middle
 while that part of the floor which rests on
 the arches remains in its place; hence, floors
 laid over two kinds of supports look, in
 time, as if they were made in hills [19].

Remarks on the style of Leonardo's architecture.

A few remarks may here be added on the style of Leonardo's architectural studies. However incomplete, however small in scale, they allow us to establish a certain number of facts and probabilities, well worthy of consideration.

When Leonardo began his studies the great name of Brunellesco was still the inspiration of all Florence, and we cannot doubt that Leonardo was open to it, since we find among his sketches the plan of the church of Santo Spirito¹ and a lateral view of San Lorenzo (Pl. XCIV No. 1), a plan almost identical with the chapel Degli Angeli, only begun by him (Pl. XCIV, No. 3) while among Leonardo's designs for domes several clearly betray the influence of Brunellesco's Cupola and the lantern of Santa Maria del Fiore².

The beginning of the second period of modern Italian architecture falls during the first twenty years of Leonardo's life. However the new impetus given by Leon Battista Alberti either was not generally understood by his contemporaries, or those who appreciated it, had no opportunity of showing that they did so. It was only when taken up by Bramante and developed by him to the highest rank of modern architecture that this new influence was generally felt. Now the peculiar feature of Leonardo's sketches is that, like the works of Bramante, they appear to be the development and continuation of Alberti's.

¹ See Pl. XCIV, No. 2. Then only in course of erection after the designs of Brunellesco, though he was already dead; finished in 1481.

² A small sketch of the tower of the Palazzo della Signoria (MS. C. A. 309) proves that he also studied mediæval monuments.

But a question here occurs which is difficult to answer. Did Leonardo, till he quitted Florence, follow the direction given by the dominant school of Brunellesco, which would then have given rise to his "First manner", or had he, even before he left Florence, felt Alberti's influence—either through his works (Palazzo Rucellai, and the front of Santa Maria Novella) or through personal intercourse? Or was it not till he went to Milan that Alberti's work began to impress him through Bramante, who probably had known Alberti at Mantua about 1470 and who not only carried out Alberti's views and ideas, but, by his designs for St. Peter's at Rome, proved himself the greatest of modern architects. When Leonardo went to Milan Bramante had already been living there for many years. One of his earliest works in Milan was the church of Santa Maria presso San Satiro, Via del Falcone¹.

Now we find among Leonardo's studies of Cupolas on Plates LXXXIV and LXXXV and in Pl. LXXX several sketches which seem to me to have been suggested by Bramante's dome of this church.

The MSS. B and Ash. II contain the plans of S. Sepolcro, the pavilion in the garden of the duke of Milan, and two churches, evidently inspired by the church of San Lorenzo at Milan.

MS. B. contains besides two notes relating to Pavia, one of them a design for the sacristy of the Cathedral at Pavia, which cannot be supposed to be dated later than 1492, and it has probably some relation to Leonardo's call to Pavia June 21, 1490². These and other considerations justify us in concluding, that Leonardo made his studies of cupolas at Milan, probably between the years 1487 and 1492 in anticipation of the erection of one of the grandest churches of Italy, the Cathedral of Pavia. This may explain the decidedly Lombardo-Bramantesque tendency in the style of these studies, among which only a few remind us of the forms of the cupolas of S. Maria del Fiore and of the Baptistery of Florence. Thus, although when compared with Bramante's work, several of these sketches plainly reveal that master's influence, we find, among the sketches of domes, some, which show already Bramante's classic style, of which the Tempietto of San Pietro in Montorio, his first building executed at Rome, is the foremost example³.

On Plate LXXXIV is a sketch of the plan of a similar circular building; and the Mausoleum on Pl. XCVIII, no less than one of the pedestals for the statue of Francesco Sforza (Pl. LXV), is of the same type.

¹ Evidence of this I intend to give later on in a Life of Bramante, which I have in preparation.

² The sketch of the plan of Brunellesco's church of Santo Spirito at Florence, which occurs in the same Manuscript, may have been done from memory.

³ It may be mentioned here, that in 1494 Bramante made a similar design for the lantern of the Cupola of the Church of Santa Maria delle Grazie.

The drawings *Pl. LXXXIV No. 2, Pl. LXXXVI No. 1 and 2* and the ground floor of the building in the drawing *Pl. XCI No. 2*, with the interesting decoration by gigantic statues in large niches, are also, I believe, more in the style Bramante adopted at Rome, than in the Lombard style. Are we to conclude from this that Leonardo on his part influenced Bramante in the sense of simplifying his style and rendering it more congenial to antique art? The answer to this important question seems at first difficult to give, for we are here in presence of Bramante, the greatest of modern architects, and with Leonardo, the man comparable with no other. We have no knowledge of any buildings erected by Leonardo, and unless we admit personal intercourse—which seems probable, but of which there is no proof—, it would be difficult to understand how Leonardo could have affected Bramante's style. The converse is more easily to be admitted, since Bramante, as we have proved elsewhere, drew and built simultaneously in different manners, and though in Lombardy there is no building by him in his classic style, the use of brick for building, in that part of Italy, may easily account for it.

Bramante's name is incidentally mentioned in Leonardo's manuscripts in two passages (*Nos. 1414 and 1448*). On each occasion it is only a slight passing allusion, and the nature of the context gives us no due information as to any close connection between the two artists.

It might be supposed, on the ground of Leonardo's relations with the East given in sections *XVII and XXI* of this volume, that some evidence of oriental influence might be detected in his architectural drawings. I do not however think that any such traces can be pointed out with certainty unless perhaps the drawing for a Mausoleum, *Pl. XCVIII*.

Among several studies for the construction of cupolas above a Greek cross there are some in which the forms are decidedly monotonous. These, it is clear, were not designed as models of taste; they must be regarded as the results of certain investigations into the laws of proportion, harmony and contrast.

The designs for churches, on the plan of a Latin cross are evidently intended to depart as little as possible from the form of a Greek cross; and they also show a preference for a nave surrounded with outer porticos.

The architectural forms preferred by Leonardo are pilasters coupled (*Pl. LXXXII No. 1*) or grouped (*Pl. LXXX No. 5 and XCVI No. 4*), often combined with niches. We often meet with orders superposed, one in each story, or two small orders on one story, in combination with one great order (*Pl. XCVI No. 2*).

The drum (*tamburo*) of these cupolas is generally octagonal, as in the cathedral of Florence, and with similar round windows in its sides. In Pl. LXXXVII No. 2 it is circular like the model actually carried out by Michael Angelo at St. Peter's.

The cupola itself is either hidden under a pyramidal roof, as in the Baptistery of Florence, San Lorenzo of Milan and most of the Lombard churches (Pl. XCI No. 1 and Pl. XCII No. 1); but it more generally suggests the curve of Sta Maria del Fiore (Pl. LXXXVIII No. 5; Pl. XL No. 2; Pl. LXXXIX, M; Pl. XL No. 4, Pl. XCVI No. 2). In other cases (Pl. LXXX No. 4; Pl. LXXXIX; Pl. XC No. 2) it shows the sides of the octagon crowned by semicircular pediments, as in Brunellesco's lantern of the Cathedral and in the model for the Cathedral of Pavia.

Finally, in some sketches the cupola is either semicircular, or as in Pl. LXXXVII No. 2, shows the beautiful line, adopted sixty years later by Michael Angelo for the existing dome of St. Peter's.

It is worth noticing that for all these domes Leonardo is not satisfied to decorate the exterior merely with ascending ribs or mouldings, but employs also a system of horizontal parallels to complete the architectural system. Not the least interesting are the designs for the *tiburio* (cupola) of the Milan Cathedral. They show some of the forms, just mentioned, adapted to the peculiar gothic style of that monument.

The few examples of interiors of churches recall the style employed in Lombardy by Bramante, for instance in S. Maria di Canepanuova at Pavia, or by Dolcebuono in the Monastero Maggiore at Milan (see Pl. CI No. 1 [C. A. 181^b; 546^b]; Pl. LXXXIV No. 10).

The few indications concerning palaces seem to prove that Leonardo followed Alberti's example of decorating the walls with pilasters and a flat rustica, either in stone or by *graffitti* (Pl. CII No. 1 and Pl. LXXXV No. 14).

By pointing out the analogies between Leonardo's architecture and that of other masters we in no way pretend to depreciate his individual and original inventive power. These are at all events beyond dispute. The project for the Mausoleum (Pl. XCVIII) would alone suffice to rank him among the greatest architects who ever lived. The peculiar shape of the tower (Pl. LXXX), of the churches for preaching (Pl. XCVII No. 1 and pages 56 and 57, Fig. 1—4), his curious plan for a city with high and low level streets (Pl. LXXVII and LXXVIII No. 2 and No. 3), his Loggia with fountains (Pl. LXXXII No. 4) reveal an originality, a power and facility of invention for almost any given problem, which are quite wonderful.

In addition to all these qualities he probably stood alone in his day in one department of architectural study,—his investigations, namely, as to the resistance of vaults, foundations, walls and arches.

As an application of these studies the plan of a semicircular vault (Pl. CIII No. 2) may be mentioned here, disposed so as to produce no thrust on the columns on which it rests: volta ī botte e non ispignie īfori le colone. Above the geometrical patterns on the same sheet, close to a circle inscribed in a square is the note: la ragiō d'una volta cioè il terzo del diamitro della sua . . . del tedesco in domo.

There are few data by which to judge of Leonardo's style in the treatment of detail. On Pl. LXXXV No. 10 and Pl. CIII No. 3, we find some details of pillars; on Pl. CI No. 3 slender pillars designed for a fountain and on Pl. CIII No. 1 MS. B, is a pen and ink drawing of a vase which also seems intended for a fountain. Three handles seem to have been intended to connect the upper parts with the base. There can be no doubt that Leonardo, like Bramante, but unlike Michael Angelo, brought infinite delicacy of motive and execution to bear on the details of his work.

XIV.

Anatomy, Zoology and Physiology.

Leonardo's eminent place in the history of medicine, as a pioneer in the sciences of Anatomy and Physiology, will never be appreciated till it is possible to publish the mass of manuscripts in which he largely treated of these two branches of learning. In the present work I must necessarily limit myself to giving the reader a general view of these labours, by publishing his introductory notes to the various books on anatomical subjects. I have added some extracts, and such observations as are scattered incidentally through these treatises, as serving to throw a light on Leonardo's scientific attitude, besides having an interest for a wider circle than that of specialists only.

VASARI expressly mentions Leonardo's anatomical studies, having had occasion to examine the manuscript books which refer to them. According to him Leonardo studied Anatomy in the companionship of Marc Antonio della Torre "aiutato e scambievolmente aiutando."—This learned Anatomist taught the science in the universities first of Padua and then of Pavia, and at Pavia he and Leonardo may have worked and studied together. We have no clue to any exact dates, but in the year 1506 Marc Antonio della Torre seems to have not yet left Padua. He was scarcely thirty years old when he died in 1512, and his writings on anatomy have not only never been published, but no manuscript copy of them is known to exist.

This is not the place to enlarge on the connection between Leonardo and Marc Antonio della Torre. I may however observe that I have not been able to discover in Leonardo's manuscripts on anatomy any mention of his younger contemporary. The few quotations which occur from writers on medicine—either of antiquity or of the middle ages are printed in Section XXII. Here and there in the manuscripts mention is made of an anonymous "adversary" (avversario) whose views are opposed and refuted by Leonardo, but there is no ground for supposing that Marc Antonio della Torre should have been this "adversary".

Only a very small selection from the mass of anatomical drawings left by Leonardo have been published here in facsimile, but to form any adequate idea of their scientific

merit they should be compared with the coarse and inadequate figures given in the published books of the early part of the XVI. century.

William Hunter, the great surgeon—a competent judge—who had an opportunity in the time of George III. of seeing the originals in the King's Library, has thus recorded his opinion: "I expected to see little more than such designs in Anatomy as might be useful to a painter in his own profession. But I saw, and indeed with astonishment, that Leonardo had been a general and deep student. When I consider what pains he has taken upon every part of the body, the superiority of his universal genius, his particular excellence in mechanics and hydraulics, and the attention with which such a man would examine and see objects which he has to draw, I am fully persuaded that Leonardo was the best Anatomist, at that time, in the world . . . Leonardo was certainly the first man, we know of, who introduced the practice of making anatomical drawings" (Two introductory letters. London 1784, pages 37 and 39).

The illustrious German Naturalist Johann Friedrich Blumenbach esteemed them no less highly; he was one of the privileged few who, after Hunter, had the chance of seeing these Manuscripts. He writes: *Der Scharfblick dieses grossen Forschers und Darstellers der Natur hat schon auf Dinge geachtet, die noch Jahrhunderte nachher unbemerkt geblieben sind*" (see Blumenbach's *medizinische Bibliothek*, Vol. 3, St. 4, 1795, page 728).

These opinions were founded on the drawings alone. Up to the present day hardly anything has been made known of the text, and, for the reasons I have given, it is my intention to reproduce here no more than a selection of extracts which I have made from the originals at Windsor Castle and elsewhere. In the Bibliography of the Manuscripts, at the end of this volume a short review is given of the valuable contents of these Anatomical note books which are at present almost all in the possession of her Majesty the Queen of England. It is, I believe, possible to assign the date with approximate accuracy to almost all the fragments, and I am thus led to conclude that the greater part of Leonardo's anatomical investigations were carried out after the death of della Torre.

Merely in reading the introductory notes to his various books on Anatomy which are here printed it is impossible to resist the impression that the Master's anatomical studies bear to a very great extent the stamp of originality and independent thought.

I.

ANATOMY.

W. An. IV. 167a]

796.

Voglio far miraculi;—²abbi mē che li altri o³mini più quieti, e ⁴quelli che vogliono ar⁵ricchirsi in ū dì; vivi ⁶nel lungo tēpo in ⁷grā povertà, co⁸me interviene e ⁹interverrà in etter¹⁰no alli alchimisti, ¹¹cercatori di cre¹²are oro e argēto, ¹³e all' igegnieri che ¹⁴vogliono che l'a¹⁵cqua morta dia ¹⁶vita motiua ¹⁷a se medesima ¹⁸con cōtinuo ¹⁹mo- to, ²⁰e al sōmo stol²¹to negromante ²²e icantatore.

²³E tu che dici, esser me²⁴glio il uedere fare ²⁵l'anatomia, che uede²⁶re tali disegni, dire²⁷sti bene, se fusse ²⁸possibile vedere tu²⁹tte queste cose che ³⁰in tal disegni si di³¹mostrano in una ³²sola figura, nella ³³quale con tutto il tu³⁴o ingenio nō vedra³⁵i, e non avrai la no³⁶titia, se nō d'alquā³⁷te poche vene, del³⁸le · quali io, per aver³⁹ne · vera · e piena ⁴⁰notitia, ò disfatti ⁴¹piv di dieci co⁴²rpi vmani, ⁴³di-

I wish to work miracles;—it may be that I shall possess less than other men of more peaceful lives, or than those who want to grow rich in a day. I may live for a long time in great poverty, as always happens, and to all eternity will happen, to alchemists, the would-be creators of gold and silver, and to engineers who would have dead water stir itself into life and perpetual motion, and to those supreme fools, the necromancer and the enchanter.

[23]And you, who say that it would be better to watch an anatomist at work than to see these drawings, you would be right; if it were possible to observe all the things which are demonstrated in such drawings in a single figure, in which you, with all your cleverness, will not see nor obtain knowledge of more than some few veins, to obtain a true and perfect knowledge of which I have dissected more than ten human bodies, destroying

796. 3. quieti ecq. 4. voliano a. 5. richire nūdi. 6. lungho. 9. intervera. 10. archimisti. 14. voglia. 15. cq"ta" morta. 17. asse. 20. sono. 23. "e" ettu che di. 27. fussi. 31. mosstrano. 35. e non arai. 37. vene de. 43. destrugendo.

796. Lines 1—59 and 60—89 are written in two parallel columns. When we here find Leonardo putting himself in the same category as the Alchemists and Necromancers, whom he elsewhere mocks at so bitterly, it is evidently meant ironically. In the same way Leonardo, in the introduction to the

Books on Perspective sets himself with transparent satire on a level with other writers on the subject.

Line 23 and the following seem to be directed against students of painting and young artists rather than against medical men and anatomists.

struggendo ogni ⁴⁴altri mēbri, consu⁴⁵mando con minutis⁴⁶sime particule ⁴⁷tutta la carne che ⁴⁸d'intorno a esse ⁴⁹vene si trovaua, ⁵⁰sanza insanguin⁵¹arle, se non d'is⁵²sensibile insan⁵³guinamēto delle vene capillari; ⁵⁴e vn sol corpo nō ⁵⁵bastava a tanto tēpo, che biso⁵⁶gnava procedere di mano in mano ⁵⁷in tanti corpi, che si finisca la inte⁵⁸ra cognitione; le qual repli⁵⁹cai 2 volte per vedere le differentie.

⁶⁰E se tu avrai l'amore a tal cosa, ⁶¹tu sarai forse impedito dallo ⁶²stomaco, e se questo nō ti impedi⁶³sce, tu sarai forse impedito dal⁶⁴la paura coll' abitare nelli tē⁶⁵pi notturni in cōpagnia di tali ⁶⁶morti squadrati e scorticati e ⁶⁷spaventevoli a vederli; e se que⁶⁸sto nō t'ipedisce, forse ti mäche⁶⁹rà il disegno bono, il quale s'appa⁷⁰rtiene a tal figurazione; E ⁷¹se tu avrai il disegno e' nō sarà ⁷²accōpagnato dalla prospettiva, ⁷³e se sarà accōpagnato ⁷⁴e' ti mächerà l'ordine ⁷⁵delle dimostratiō ⁷⁶geometriche e l'ordine ⁷⁷delle calculation delle ⁷⁸forze e valimēto de' ⁷⁹muscoli; e forse ti ⁸⁰mächerà la patiētia che ⁸¹tu nō sarai diligēte; Delle ⁸²quali se in me tutte queste ⁸³cose sono state o no, ⁸⁴i cēto 20 libri da me ⁸⁵conposti ne darā sentē⁸⁶tia del sì o del no, nelli ⁸⁷quali nō sono stato impedi⁸⁸to nè d'auaritia o negligētia, ⁸⁹ma sol dal tempo || vale.

all the other members, and removing the very minutest particles of the flesh by which these veins are surrounded, without causing them to bleed, excepting the insensible bleeding of the capillary veins; and as one single body would not last so long, since it was necessary to proceed with several bodies by degrees, until I came to an end and had a complete knowledge; this I repeated twice, to learn the differences [59].

And if you should have a love for such things you might be prevented by loathing, and if that did not prevent you, you might be deterred by the fear of living in the night hours in the company of those corpses, quartered and flayed and horrible to see. And if this did not prevent you, perhaps you might not be able to draw so well as is necessary for such a demonstration; or, if you had the skill in drawing, it might not be combined with knowledge of perspective; and if it were so, you might not understand the methods of geometrical demonstration and the method of the calculation of forces and of the strength of the muscles; patience also may be wanting, so that you lack perseverance. As to whether all these things were found in me or not [84], the hundred and twenty books composed by me will give verdict Yes or No. In these I have been hindered neither by avarice nor negligence, but simply by want of time. Farewell [89].

W. A. II. 36a (21)]

84. Leonardo frequently, and perhaps habitually, wrote in note books of a very small size and only moderately thick; in most of those which have been preserved undivided, each contains less than fifty leaves. Thus a considerable number of such volumes must have gone to make up a volume of the bulk of the 'Codex Atlanticus' which now contains nearly 1200 detached leaves. In the passage under consideration, which was evidently written at a late

period of his life, Leonardo speaks of his Manuscript note-books as numbering 120; but we should hardly be justified in concluding from this passage that the greater part of his Manuscripts were now missing (see *Prolegomena*, Vol. I, pp. 5-7).

797. The meaning of the word *nervo* varies in different passages, being sometimes used for *muscolo* (muscle).

da · uno grado d'accrescimēto · a · uno · altro, e che cosa lo spigna fori ⁵del corpo · della madre ·, e per che · cagione qualche · uolta · lui · uēga fori · dal uētro di sua madre ināti al debito ⁶tēpo.

⁷Poi discriuerai quali mēbra sieno · quelle · che crescono · poi · che'l putto è nato · piv che l'altre, ⁸e da la misura d'ū putto · d'un anno.

⁹Poi discrivì l'omo cresciuto e la fēmina · e sue · misure · e nature di complessione colore ¹⁰e fisonomie.

¹¹Di poi discrivì com'egli è cōposto · di uene ·, nerui ·, muscoli e ossa; Questo farai nell'ultimo del libro; ¹²di poi figura · in · 4 storie · quattro vniversali casi delli omini ·, cioè letitia con uari atti di ridere, ¹³e figura · la cagiō · del riso ·; piāto in vari modi colla · sua · cagione ·; cōtētione cō uari movi¹⁴mēti d'uccisione ·, fughe ·, pavre ·, ferocità ·, ardimēti, micidi · e tutte cose appartenēti a simil casi; ¹⁵di poi figura · vna fatica cō tirare, spiegniere · portare, fermare, sostenere e simili ¹⁶cose;

¹⁷Di poi discrivì attitudine · e movimēto; ¹⁸di poi prospettiva · per l'ofitio e effetti dell'occhio e dell'udito,—dirai di mvsicha—e discrivì delli altri sēsì.

¹⁹Di poi discrivì la natura · de' sensi.

²⁰Questa figura strumētale dell'omo dimostreremo in . . figure, delle ²¹quali le 3 prime saranno la ramificatione delle ossa, cioè vna dināzi · che ²²dimostrì l'altitudine de' siti e figure delli ossi, la seconda sarà veduta in ²³proffilo e mostrerà la profondità del tutto e delle parti e loro sito; La ³a ²⁴figura fia dimostratrice delle ossa dalla parte dirieto; Di poi faremo ²⁵3 altre figure ne' simili aspetti colle ossa segate, nelle quali si vedranno le lor ²⁶grossezze e uacuità; 3 altre figure faremo dell' ossa intere e de' nerui che na²⁷scono dalla nuca, e in che mēbra ramificano; E 3 altre de' ossa e vene e do²⁸ve ramificano, poi 3 con muscoli e 3 con pelle, e figure propor²⁹tionate, e 3 della femina per dimostrare matrice e vene mestruali, ³⁰che vanno alle poppe.

one stage of growth and another. What it is that forces it out from the body of the mother, and for what reasons it sometimes comes out of the mother's womb before the due time.

Then I will describe which are the members, which, after the boy is born, grow more than the others, and determine the proportions of a boy of one year.

Then describe the fully grown man and woman, with their proportions, and the nature of their complexions, colour, and physiognomy.

Then how they are composed of veins, tendons, muscles and bones. This I shall do at the end of the book. Then, in four drawings, represent four universal conditions of men. That is, Mirth, with various acts of laughter, and describe the cause of laughter. Weeping in various aspects with its causes. Contention, with various acts of killing; flight, fear, ferocity, boldness, murder and every thing pertaining to such cases. Then represent Labour, with pulling, thrusting, carrying, stopping, supporting and such like things.

Further I would describe attitudes and movements. Then perspective, concerning the functions and effects of the eye; and of hearing—here I will speak of music—, and treat of the other senses.

And then describe the nature of the senses.

This mechanism of man we will demonstrate in . . figures; of which the three first will show the ramification of the bones; that is: first one to show their height and position and shape: the second will be seen in profile and will show the depth of the whole and of the parts, and their position. The third figure will be a demonstration of the bones of the backparts. Then I will make three other figures from the same point of view, with the bones sawn across, in which will be shown their thickness and hollowness. Three other figures of the bones complete, and of the nerves which rise from the nape of the neck, and in what limbs they ramify. And three others of the bones and veins, and where they ramify. Then three figures with the muscles and three with the skin, and their proper proportions; and three of woman, to illustrate the womb and the menstrual veins which go to the breasts.

ORDINE DEL LIBRO.

² Questa mia figurazione del corpo umano ti sarà dimostra non altrimenti, che se tu avessi l'omo naturale inanti, e la ragione si è, che se tu vuoi bene conoscere le parti dell'omo anatomizzato, tu lo vuoi—o l'occhio tuo—per diversi aspetti, quello considerando di sotto, e di sopra, e dalli lati, voltando⁶lo e cercando l'origine di ciascun membro, e in tal modo la notomia naturale à soddisfatta alla tua notizia; Ma tu à a intendere, che tal notizia non ti lascia soddisfatto, cosìachè la grandissima confusione che ⁹resulta della mistione di particolari misti con uene, arterie, nervi, corde, ¹⁰muscoli, ossi, sangue, il quale tigne di se ogni parte d'un medesimo colore, e le vene, che di tal sangue si votano non sono conosciute per la loro diminutione, e la integrità delli pannicoli, nel cercare le parti che dentro a ¹³loro s'includono, si viene a rompere, e la loro trasparenza, tinta di sangue, ¹⁴non ti lascia conoscere le parti coperte da loro per la similitudine del loro colore insanguinato, e non puoi avere la notizia dell'ù che tu ¹⁶non confonda e distrugga l'altro; adunque è necessario fare più notomie, ¹⁷delle quali 3 te ne bisogna per avere piena notizia delle vene e arterie, ¹⁸distruggendo con somma diligentia tutto il rimanente, e altre 3 per avere la notizia ¹⁹delli pannicoli, e 3 per le corde e muscoli e legamenti, e 3 per li ossi e cartilagini, e 3 per la notomia delle ossa, le quali s'anno a segare e dimostrare, quale è buso e quale no, quale è midolloso, quale è spugnoso, e quale è grosso dal fuori al dentro, e quale è sottile, e alcuno à in alcuna parte grandissima sottigliezza, e in alcuna è grosso, e in alcuna busa, o

THE ORDER OF THE BOOK.

This depicting of mine of the human body will be as clear to you as if you had the natural man before you; and the reason is that if you wish thoroughly to know the parts of man, anatomically, you—or your eye—require to see it from different aspects, considering it from below and from above and from its sides, turning it about and seeking the origin of each member; and in this way the natural anatomy is sufficient for your comprehension. But you must understand that this amount of knowledge will not continue to satisfy you; seeing the very great confusion that must result from the combination of tissues, with veins, arteries, nerves, sinews, muscles, bones, and blood which, of itself, tinges every part the same colour. And the veins, which discharge this blood, are not discerned by reason of their smallness. Moreover integrity of the tissues, in the process of the investigating the parts within them, is inevitably destroyed, and their transparent substance being tinged with blood does not allow you to recognise the parts covered by them, from the similarity of their blood-stained hue; and you cannot know everything of the one without confusing and destroying the other. Hence, some further anatomy drawings become necessary. Of which you want three to give full knowledge of the veins and arteries, everything else being destroyed with the greatest care. And three others to display the tissues; and three for the sinews and muscles and ligaments; and three for the bones and cartilages; and three for the anatomy of the bones, which have to be sawn to show which are hollow and which are not, which have marrow and which are spongy, and which are thick from the outside inwards, and which are thin. And some are extremely thin in some parts and thick in others, and in some parts hollow or filled up with bone, or full of marrow, or spongy. And all these conditions are sometimes found

piena ²⁴d'osso, o midolloso, o spugnosa; e così tutte queste cose saranno alcuna volta ^{tro}²⁵vate in un medesimo osso, e alcuno osso fia che non à nessuna; e 3 te ne bisog-²⁶na fare per la donna, nella quale è grā misterio, mediante la matrice e suo feto; ²⁷adunque per il mio disegno ti fia noto ogni parte e ogni tutto mediante la di²⁸mostrazione di 3 diuersi aspetti di ciascuna parte, perchè quando tu avrai veduto alcun mēbro dalla parte dinanzi con qualche neruo, corda, o vena che ³⁰nasca dalla opposita parte, ti fia dimostro il medesimo mēbro volto per lato ³¹o dirieto-; non altremēti che se tu auessi in mano il medesimo mēbro e andas³²si lo voltādo di parte in parte insino a tanto che tu auessi piena notizia di quel³³lo che tu desideri sapere, e così similmēte ti fia posto inanti in tre o ³⁴4 dimostrazioni di ciascū mēbro per diuersi aspetti in modo che tu restarai con³⁵vera e piena notizia di quello che tu vuoi sapere della figura dell'omo.

³⁶Adunque qui con 12 figure intiere ti sarà mostrata la cosmografia del minor ³⁷mōdo col medesimo ordine che ināzi a me fu fatto da Tolomeo nella sua cosmogra³⁸fia, e così diuidero poi quelle in mēbra, come lui diuise il tutto in provincie; ³⁹e poi dirò l'ufitio delle parti per ciascū verso, mettēdoti dināti all'ochi la notizia ⁴⁰di tutta la figura e validudine dell'omo inquāto a moto locale mediante le sue parti, ⁴¹E così piacesse al nostro autore che io potessi dimostrare la natura delli omi e lo⁴²ro costumi nel modo che io descivo la sua figura.

⁴³E ricordoti che la notomia delli nerui non ti darà la situatione della loro rami⁴⁴ficatione, nè in quali muscoli essi si ramificano mediante li corpi disfatti in acqua ⁴⁵corrēte, o in acqua di calcina, perchè, ancorachè ti rimāga la origine de'lor nascimenti ⁴⁶sanza tale acqua come coll'acqua, le ramificationi loro pel corso dell'acqua si ⁴⁷vengono a vnire, non altremēti che si fascia il lino o canapa pettinata per filare, ⁴⁸tutto in vn fascio in modo che impossibile è a ritrovare in quali muscoli o cō quale ⁴⁹o cō quāte ramificationi li nerui s'infondino ne' predetti muscoli.

in one and the same bone, and in some bones none of them. And three you must have for the woman, in which there is much that is mysterious by reason of the womb and the foetus. Therefore by my drawings every part will be known to you, and all by means of demonstrations from three different points of view of each part; for when you have seen a limb from the front, with any muscles, sinews, or veins which take their rise from the opposite side, the same limb will be shown to you in a side view or from behind, exactly as if you had that same limb in your hand and were turning it from side to side until you had acquired a full comprehension of all you wished to know. In the same way there will be put before you three or four demonstrations of each limb, from various points of view, so that you will be left with a true and complete knowledge of all you wish to learn of the human figure[35].

Thus, in twelve entire figures, you will have set before you the cosmography of this lesser world on the same plan as, before me, was adopted by Ptolemy in his cosmography; and so I will afterwards divide them into limbs as he divided the whole world into provinces; then I will speak of the function of each part in every direction, putting before your eyes a description of the whole form and substance of man, as regards his movements from place to place, by means of his different parts. And thus, if it please our great Author, I may demonstrate the nature of men, and their customs in the way I describe his figure.

And remember that the anatomy of the nerves will not give the position of their ramifications, nor show you which muscles they branch into, by means of bodies dissected in running water or in lime water; though indeed their origin and starting point may be seen without such water as well as with it. But their ramifications, when under running water, cling and unite—just like flat or hemp carded for spinning—all into a skein, in a way which makes it impossible to trace in which muscles or by what ramification the nerves are distributed among those muscles.

799.

ORDINE DI NOTOMIA.

²Fa prima l'ossa come dire le braccia, e poni il motore dalla spalla al ³gomito per tutte le linee; Di poi dal gomito al braccio; Di poi dal ⁴braccio alla mano e dalla mano alli diti.

⁵E nel braccio porrai li motori de' diti che s'aprono, e ⁶questi nella lor dimostrazione porrai soli; nella ²a dimostrazione vestirai questi muscoli delli secondi motori de' diti, ⁸e così farai a grado a grado per non confondere: ma primo po⁹ni sopra dell' ossa quelli muscoli che con essi ossa si congiungono, ¹⁰senza altra confusione d'altri muscoli, e con quelli porrai ¹¹li nerui e uene, che li nutriscono, auendo prima fatto l'albero delle ue¹²ne e nerui sopra delle semplici ossa.

THE ARRANGEMENT OF ANATOMY.

First draw the bones, let us say, of the arm, and put in the motor muscle from the shoulder to the elbow with all its lines. Then proceed in the same way from the elbow to the wrist. Then from the wrist to the hand and from the hand to the fingers.

And in the arm you will put the motors of the fingers which open, and these you will show separately in their demonstration. In the second demonstration you will clothe these muscles with the secondary motors of the fingers and so proceed by degrees to avoid confusion. But first lay on the bones those muscles which lie close to the said bones, without confusion of other muscles; and with these you may put the nerves and veins which supply their nourishment, after having first drawn the tree of veins and nerves over the simple bones.

W. An. IV, XXI]

800.

Comicia la notomia alla testa e finiscila nella piata del piede.

Begin the anatomy at the head and finish at the sole of the foot.

W. An. II. 39^b (o)]

802. 2. cressciere . . ettu. 3. lasstatua . chō.

802. *Cresciere l'omo.* The meaning of this expression appears to be different here and in the passage C. A. 157^a, 468^a (see No. 526, Note 1. 2). Here it can hardly mean anything else than modelling, since the sculptor forms the figure by degrees, by adding wet clay and the figure consequently increases or grows. *Tu farai la statua* would

then mean, you must work out the figure in marble. If this interpretation is the correct one, this passage would have no right to find a place in the series on anatomical studies. I may say that it was originally inserted in this connection under the impression that *di cresciere* should be read *descrivere*.

W. An. III, XXII]

803.

Farei tutti li moti dell' ossa ²colle giunture loro dopo ³la dimostrazione delle pri⁴me tre figure dell' ossa, e⁵ questo si deve fare nel primo ⁶libro.

You must show all the motions of the bones with their joints to follow the demonstration of the first three figures of the bones, and this should be done in the first book.

Plans for the representation of muscles by drawings (803-809).

W. XXIII]

804.

Ricordoti che per farti certo del nascimento di qualunque muscolo, che tu tiri ²la corda, partorita da esso muscolo, in modo che tu veda muovere esso ³muscolo e ¹il suo nascimēto sopra delle legature della ossi.

Remember that to be certain of the point of origin of any muscle, you must pull the sinew from which the muscle springs in such a way as to see that muscle move, and where it is attached to the ligaments of the bones.

NOTANDO.

⁵Tu non farai mai se nō confusione nella di^mostrazione de' muscoli e lor siti, nascimēti ⁷e fini, se prima non fai vna dimostrazione di ⁸muscoli sottili a uso di fila di refe, e così potrai ⁹figurare l'un sopra dell' altro, come li a situati la ¹⁰natura, e così li potrai nominare secōdo il mēbro ¹¹al quale lor seruono, cioè il motore della pū¹²ta del dito grosso e del suo osso di mezzo o del primo ecc; ¹³e dato che tu ài tale notitia, figurerai al lato a ¹⁴questa la uera forma e quātità e sito di ciascū muscolo; ¹⁵ma ricordati di fare li fili, che insegnano li muscoli, neg¹⁶li medesimi siti che son le linie centrali di ciascū mu¹⁷scolo, e così tali fili dimostreranno la figura della ganba ¹⁸e la loro distantia spedita e nota.

¹⁹Ho spogliato di pelle vno il quale per una mala²⁰ttia s'era tanto diminuito che li muscoli erā ²¹consumati e restati a uso di pellicola sottile, ²²in modo che le corde in scābio del conuertirsi ²³in muscolo si convertivano in larga pelle, ²⁴e quādo l'ossa erā uestite di pelle, poco acqui²⁵stauā della lor naturale grossezza.

NOTE.

You will never get any thing but confusion in demonstrating the muscles and their positions, origin, and termination, unless you first make a demonstration of thin muscles after the manner of linen threads; and thus you can represent them, one over another as nature has placed them; and thus, too, you can name them according to the limb they serve; for instance the motor of the point of the great toe, of its middle bone, of its first bone, &c. And when you have the knowledge you will draw, by the side of this, the true form and size and position of each muscle. But remember to give the threads which explain the situation of the muscles in the position which corresponds to the central line of each muscle; and so these threads will demonstrate the form of the leg and their distance in a plain and clear manner.

I have removed the skin from a man who was so shrunk by illness that the muscles were worn down and remained in a state like thin membrane, in such a way that the sinews instead of merging in muscles ended in wide membrane; and where the bones were covered by the skin they had very little over their natural size.

¹²A descriuere il principio dell'omo quādo elli si cava nella matrice, ¹³e perchè uno putto nō uive d'otto mesi; ¹⁴che cosa è starnvto, ¹⁵che cosa è sbadiglio, ¹⁶malmaestro, ¹⁷spasimo, ¹⁸paralitico, ¹⁹tremito di freddo, ²⁰sudore, ²¹stächezza, ²²fame, ²³sonno, ²⁴sete, ²⁵lussuria.

²⁶¶ Del neruo ch'è cagione del moto della spalla al gomito, ²⁷del moto che è dal gomito alla mano, ²⁸dalla givntura della mano al nascimēto de' diti, ²⁹dal nascimēto de' diti al loro mezzo ³⁰e dal mezzo all'ultimo nodo.¶

³¹Del neruo che è cagione del moto della coscia, ³²e dal ginocchio al piè, e dalla givntura del piè ai diti ³³e così ai lor mezzī, ³⁴e del girare d'essa ganba.

Which nerve causes the motion of the eye so that the motion of one eye moves the other?

Of frowning the brows, of raising the brows, of lowering the brows,—of closing the eyes, of opening the eyes,—of raising the nostrils, of opening the lips, with the teeth shut, of pouting with the lips, of smiling, of astonishment.—

Describe the beginning of man when it is caused in the womb and why an eight months child does not live. What sneezing is. What yawning is. Falling sickness, spasms, paralysis, shivering with cold, sweating, fatigue, hunger, sleepiness, thirst, lust.

Of the nerve which is the cause of movement from the shoulder to the elbow, of the movement from the elbow to the hand, from the joint of the hand to the springing of the fingers. From the springing of the fingers to the middle joints, and from the middle joints to the last.

Of the nerve which causes the movement of the thigh, and from the knee to the foot, and from the joint of the foot to the toes, and then to the middle of the toes and of the rotary motion of the leg.

F. 95A]

806.

ANATOMIA.

ANATOMY.

²Quali nerui over corde della mano sō ³quelle che accostano e discostano li ⁴diti della mano e de' piedi l'un dall'altro?

Which nerves or sinews of the hand are those which close and part the fingers and toes laterally?

W. 238B]

807.

Scuopri a grado a grado tutte le parti dinanti dell'omo ²nel fare la tua notomia, e così insino in sull'osso; ³descriptione de' mēbra della vita e lor traugiamēti.

Remove by degrees all the parts of the front of a man in making your dissection, till you come to the bones. Description of the parts of the bust and of their motions.

K.3 28a]

808.

III.

PHYSIOLOGY.

W. An. IV. 173 a]

827.

Ho trovato nella compositione del corpo umano che, come in tutte ²le compositioni delli animali, esso è di piv ottusi e grossi sentimēti; ³così è composto di strumēto manco ingegnoso e di lochi māco ⁴capaci a ricevere la uirtù de' sensi; ò veduto nella spetie leonina il senso dell'odorato auere parte della sustantia del celabro, e discē-⁶dere li narici, capace ricettaculo contro al senso dello odorato, ⁷il quale entra infra grā numero di saccoli cartiluginosi con assai ⁸vie contro all'avenimento del predetto celabro.

⁹Li ochi della spetie leonina ànno gran parte della lor testa per lor ¹⁰ricettacolo, e li nerui ottici immediate congiugnersi col celabro; il che al¹¹li omini si uede in contrario, perchè le casse delli ochi sono vna piccò¹²la parte del capo, e li nerui ottici sono sottili e lunghi e deboli, e per debo-¹³le operatione si uede di loro il dì, e peggio la notte, e li predetti animali ¹⁴vedono in nella notte che ¹⁵il giorno; ¹⁵e ¹⁶il segno se ne vede, perchè predano di notte ¹⁶e dormono il giorno come fano ancora li ucelli notturni.

I have found that in the composition of the human body as compared with the bodies of animals the organs of sense are duller and coarser. Thus it is composed of less ingenious instruments, and of spaces less capacious for receiving the faculties of sense. I have seen in the Lion tribe that the sense of smell is connected with part of the substance of the brain which comes down the nostrils, which form a spacious receptacle for the sense of smell, which enters by a great number of cartilaginous vesicles with several passages leading up to where the brain, as before said, comes down.

Comparative study of the organs of sense in men and animals.

The eyes in the Lion tribe have a large part of the head for their sockets and the optic nerves communicate at once with the brain; but the contrary is to be seen in man, for the sockets of the eyes are but a small part of the head, and the optic nerves are very fine and long and weak, and by the weakness of their action we see by day but badly at night, while these animals can see as well at night as by day. The proof that they can see is that they prowl for prey at night and sleep by day, as nocturnal birds do also.

H. 2 38 a]

Advantages
in the struc-
ture of the
eye in cer-
tain animals
(828-831).

¶ Tutte le cose vedute parrāno ² mag-
giori di mezza notte, che di ³ mezzo di
e maggiori di mattina che ⁴ di mezzodì. ¶
⁵ Questo accade perchè la pupilla ⁶ del-
l'occhio è minore assai di mezzo ⁷ di che
di nessuno altro tempo.

⁸ Tanto quāto è maggiore l'occhio
⁹ over pupilla del gufo a propotione ¹⁰ dello
animale, che non è quella dell' ¹¹ omo,
tanto piv lume vede di notte che ¹² nō fa
l'omo; oē di mezzo di nō vede ni¹³cente,
selui nō diminuisce sua pupill¹⁴a, e simil-
mēte vede di notte le cose mag¹⁵giori
che di di.

828.

Every object we see will appear larger at midnight than at midday, and larger in the morning than at midday.

This happens because the pupil of the eye is much smaller at midday than at any other time.

In proportion as the eye or the pupil of the owl is larger in proportion to the animal than that of man, so much the more light can it see at night than man can; hence at midday it can see nothing if its pupil does not diminish; and, in the same way, at night things look larger to it than by day.

G. 41 a]

DELLI OCHI DELLI ANIMALI.

¹ Li ochi di tutti li animali āno le ² lor
popille, le quali per loro medesime cres-
³ cono e diminuiscono secōdo il mag⁴giore
e minore lume del sole o altro ⁵ chiarore;
Ma nelli uccelli fa maggio⁶re differētia, e
massima nelli nottur⁷ni, come gufi, barba-
gianni, e all'ochi ⁸ che son di spetie di
civetta; a questi cresce ⁹ la popilla in modo
che quasi occupa tut¹⁰to l'occhio, e dimi-
nuisce insino alla grā¹¹dezza d'ū grā di
miglio e sempre osser¹²va figura circolare;
Ma la spe¹³tie leonina come pātere,
pardi, ¹⁴ leōze, tigri, lupi, cieriueri,
gātti di Spa¹⁵gnia e altri simili dimi-
nuiscono ¹⁶ la lucie dal perfetto circolo
¹⁷ alla figura biāgolare, cioè questa ¹⁸ è
come si dimostra in margine; Ma l'uo-
mo ¹⁹ per avere piū debole vista
che nessuno altro a²⁰ animale, meno è
offeso dalla superchia luce, ²¹ e mē s'av-
mēta nelli lochi tenebrosi; ma ²² all'ochi
delli detti animali notturni,—al ²³ gufo vc-
ciello cornuto, il quale è 'l ²⁴ massimo nella
spetie delli vcelli nottur²⁵ni: a questo s'av-
mēta tanto la uirtū vi²⁶siva, che nel minimo

OF THE EYES IN ANIMALS.

The eyes of all animals have their pupils adapted to dilate and diminish of their own accord in proportion to the greater or less light of the sun or other luminary. But in birds the variation is much greater; and particularly in nocturnal birds, such as horned owls, and in the eyes of one species of owl; in these the pupil dilates in such a way as to occupy nearly the whole eye, or diminishes to the size of a grain of millet, and always preserves the circular form. But in the Lion tribe, as panthers, pards, ounces, tigers, lynxes, spanish cats and other similar animals the pupil diminishes from the perfect circle to the figure of a pointed oval such as is shown in the margin. But man having a weaker sight than any other animal is less hurt by a very strong light and his pupil increases but little in dark places; but in the eyes of these nocturnal animals, the horned owl—a bird which is the largest of all nocturnal birds—the power of vision increases so much that in the faintest nocturnal light (which we call darkness) it sees

830.

a b n è il coperchio di sotto che chiude ²l'occhio di sotto in sù con coperchio oppaco, ³*c n b* chiude l'occhio dinanzi idietro ⁴con coperchio trasparente.

⁵Chiudesi sotto in sù ⁶perchè da alto disciē⁷de.

⁸Quando l'occhio delli uccelli si chiude ⁹colle sue due coperture, esso chiu¹⁰de prima la secondina la qual ¹¹chiude dal lagrimatoio alla co¹²da d'esso occhio, e la prima si chi¹³ude da basso in alto, e que¹⁴sti due moti intersegati occupano ¹⁵in prima dal lacrimatoio, perchè già abbiamo veduto che ¹⁶dinanzi e di sotto si sono assicurati, e sol serba¹⁷no la parte di sopra per li pericoli delli uccielli ra¹⁸paci che discendono di sopra e di dietro; e sco¹⁹prano prima il pannicolo di verso la coda, ²⁰perchè se l' nemico viene di dietro, egli à la como²¹dità del fugire innāzi, e ancora tiene ²²il pannicolo detto secondino e traspa²³rente, perchè se non avesse tale scudo, e' nō ²⁴potrebbe tener li ochi aperti cōtro al ²⁵vēto che percuote l'occhio nel furo²⁶re del suo veloce volare; E la sua ²⁷popilla cresce e discesce nel uedere ²⁸minore o maggiore lume cioè splendore.

a b n is the membrane which closes the eye from below, upwards, with an opaque film, *c n b* encloses the eye in front and behind with a transparent membrane.

It closes from below, upwards, because it [the eye] comes downwards.

When the eye of a bird closes with its two lids, the first to close is the nictitating membrane which closes from the lacrymal duct over to the outer corner of the eye; and the outer lid closes from below upwards, and these two intersecting motions begin first from the lacrymatory duct, because we have already seen that in front and below birds are protected and use only the upper portion of the eye from fear of birds of prey which come down from above and behind; and they uncover first the membrane from the outer corner, because if the enemy comes from behind, they have the power of escaping to the front; and again the muscle called the nictitating membrane is transparent, because, if the eye had not such a screen, they could not keep it open against the wind which strikes against the eye in the rush of their rapid flight. And the pupil of the eye dilates and contracts as it sees a less or greater light, that is to say intense brilliancy.

I say that sight is exercised by all animals, by the medium of light; and if any one adduces, as against this, the sight of nocturnal animals, I must say that this in the same way is subject to the very same natural laws. For it will easily be understood that the senses which receive the images of things do not project from themselves any visual virtue[4]. On the contrary the atmospheric medium which exists between the object and the sense incorporates in itself the figure of things, and by its contact with the sense transmits the object to it. If the object—whether by sound or by odour—presents its spiritual force to the ear or the nose, then light is not required and does not act. The forms of objects do not send their images into

the air if they are not illuminated[8]; and the eye being thus constituted cannot receive that from the air, which the air does not possess, although it touches its surface. If you choose to say that there are many animals that prey at night, I answer that when the little light which suffices the nature of their eyes is wanting, they direct themselves by their strong sense of hearing and of smell, which are not impeded by the darkness, and in which they are very far superior to man. If you make a cat leap, by daylight, among a quantity of jars and crocks you will see them remain unbroken, but if you do the same at night, many will be broken. Night birds do not fly about unless the moon shines full or in part; rather do they feed between sun-down and the total darkness of the night.

No body can be apprehended without light and shade, and light and shade are caused by light.

G. 90a]

835.

PERCHÈ NELLI OMINI ATTĒPATI ²IL UEDERE È MEGLIO DISCOSTO.

³Il uedere è meglio discosto che da pres⁴so in quelli omini, li quali s'attēpano, ⁵perchè vna medesima cosa ⁶māda di se minore inpressione nell'oc⁷chio, essendo remota che quādo li è vi⁸cina.

WHY MEN ADVANCED IN AGE SEE BETTER AT A DISTANCE.

Sight is better from a distance than near in those men who are advancing in age, because the same object transmits a smaller impression of itself to the eye when it is distant than when it is near.

C. At. 89a; 258a]

is given to it solely because it is the common judge of all the other five senses *i. e.* Seeing, Hearing, Touch, Taste and Smell. This Common Sense is acted upon by means of Sensation which is placed as a medium between it and the senses. Sensation is acted upon by means of the images of things presented to it by the external instruments, that is to say the senses which are the medium between external things and Sensation. In the same way the senses are acted upon by objects. Surrounding things transmit their images to the senses and the senses transfer them to the Sensation. Sensation sends them to the Common Sense, and by it they are stamped upon the memory and are there more or less retained according to the importance or force of the impression. That sense is most rapid in its function which is nearest to the sensitive medium and the eye, being the highest is the chief of the others. Of this then only we will speak, and the others we will leave in order not to make our matter too long. Experience tells us that the eye apprehends ten different natures of things, that is: Light and Darkness, one being the cause of the perception of the nine others, and the other its absence:— Colour and substance, form and place, distance and nearness, motion and stillness[15].

W. An. IV. 184a (7)]

837.

On the origin of the soul.
Ancorachè lo ingegno ²vmano faccia īuēzioni varie, rispōdēdo cō uari ⁴strumēti a ū medesimo ⁵fine, mai esso trove⁶rà inuentione più ⁷bella, nè più facile, nè ⁸più brieve della natu⁹ra, perchè nelle sue in¹⁰venzioni nulla mā¹¹ca e nullo è superfluo, e non va cō contra¹³pesi, quādo essa fa le ¹⁴mēbra atti al moto nel¹⁵li corpi delli animali; ¹⁶Ma ui mette dentro l'a¹⁷nima d'esso corpo cōpo¹⁸nitore, cioè l'anima del¹⁹la madre che prima ²⁰conpone nella ma²¹trice la figura dell' o²²mo; e al tempo debito ²³desta l'anima, che di quel ²⁴deve essere abitatore, ²⁵la qual prima restau²⁶a dormētata e in tutela ²⁷dell' anima della

Though human ingenuity may make various inventions which, by the help of various machines answering the same end, it will never devise any inventions more beautiful, nor more simple, nor more to the purpose than Nature does; because in her inventions nothing is wanting, and nothing is superfluous, and she needs no counterpoise when she makes limbs proper for motion in the bodies of animals. But she puts into them the soul of the body, which forms them that is the soul of the mother which first constructs in the womb the form of the man and in due time awakens the soul that is to inhabit it. And this at first lies dormant

HOW THE FIVE SENSES ARE THE MINISTERS OF THE SOUL.

The soul seems to reside in the judgment, and the judgment would seem to be seated in that part where all the senses meet; and this is called the Common Sense and is not all-pervading throughout the body, as many have thought. Rather is it entirely in one part. Because, if it were all-pervading and the same in every part, there would have been no need to make the instruments of the senses meet in one centre and in one single spot; on the contrary it would have sufficed that the eye should fulfil the function of its sensation on its surface only, and not transmit the image of the things seen, to the sense, by means of the optic nerves, so that the soul—for the reason given above—may perceive it in the surface of the eye. In the same way as to the sense of hearing, it would have sufficed if the voice had mere-

ly sounded in the porous cavity of the indurated portion of the temporal bone which lies within the ear, without making any farther transit from this bone to the common sense, where the voice confers with and discourses to the common judgment. The sense of smell, again, is compelled by necessity to refer itself to that same judgment. Feeling passes through the perforated cords and is conveyed to this common sense. These cords diverge with infinite ramifications into the skin which encloses the members of the body and the viscera. The perforated cords convey volition and sensation to the subordinate limbs. These cords and the nerves direct the motions of the muscles and sinews, between which they are placed; these obey, and this obedience takes effect by reducing their thickness; for in swelling, their length is reduced, and the nerves shrink which are interwoven among the particles of the limbs; being extended to the tips of the fingers, they transmit to the sense the object which they touch.

The nerves with their muscles obey the tendons as soldiers obey the officers, and the tendons obey the Common [central] Sense as the officers obey the general. [27] Thus the joint of the bones obeys the nerve, and the nerve the muscle, and the muscle the tendon and the tendon the Common Sense. And the Common Sense is the seat of the soul [28], and memory is its ammunition, and the impressibility is its referendary since the sense waits on the soul and not the soul on the sense. And where the sense that ministers to the soul is not at the service of the soul, all the functions of that sense are also wanting in that man's life, as is seen in those born mute and blind.

849. From this passage it is quite plain that Leonardo had not merely a general suspicion of the circulation of the blood but a very clear conception of it. Leonardo's studies on the muscles of the heart are to be found in the MS. W. An. III. but no information about them has hitherto been made public. The limits of my plan in this work exclude all purely anatomical writings, therefore

only a very brief excerpt from this note book can be given here. WILLIAM HARVEY (born 1578 and Professor of Anatomy at Cambridge from 1615) is always considered to have been the discoverer of the circulation of the blood. He studied medicine at Padua in 1598, and in 1628 brought out his memorable and important work: *De motu cordis et sanguinis*.

Astronomy.

Ever since the publication by Venturi in 1797 and Libri in 1840 of some few passages of Leonardo's astronomical notes, scientific astronomers have frequently expressed the opinion, that they must have been based on very important discoveries, and that the great painter also deserved a conspicuous place in the history of this science. In the passages here printed, a connected view is given of his astronomical studies as they lie scattered through the manuscripts, which have come down to us. Unlike his other purely scientific labours, Leonardo devotes here a good deal of attention to the opinions of the ancients, though he does not follow the practice universal in his day of relying on them as authorities; he only quotes them, as we shall see, in order to refute their arguments. His researches throughout have the stamp of independent thought. There is nothing in these writings to lead us to suppose that they were merely an epitome of the general learning common to the astronomers of the period. As early as in the XIVth century there were chairs of astronomy in the universities of Padua and Bologna, but so late as during the entire XVIth century Astronomy and Astrology were still closely allied.

It is impossible now to decide whether Leonardo, when living in Florence, became acquainted in his youth with the doctrines of Paolo Toscanelli the great astronomer and mathematician (died 1482), of whose influence and teaching but little is now known, beyond the fact that he advised and encouraged Columbus to carry out his project of sailing round the world. His name is nowhere mentioned by Leonardo, and from the dates of the manuscripts from which the texts on astronomy are taken, it seems highly probable that Leonardo devoted his attention to astronomical studies less in his youth than in his later years. It was evidently his purpose to treat of Astronomy in a connected form and in a separate work (see the beginning of Nos. 866 and 892; compare also No. 1167). It is quite in accordance with his general scientific thoroughness that he should propose to write a special treatise on Optics as an introduction to Astronomy (see Nos. 867 and 877). Some of the chapters belonging to this Section bear the title

"Prospettiva" (see Nos. 867 and 870), this being the term universally applied at the time to Optics as well as Perspective (see Vol. I, p. 10, note to No. 13, l. 10).

At the beginning of the XVIth century the Ptolemaic theory of the universe was still universally accepted as the true one, and Leonardo conceives of the earth as fixed, with the moon and sun revolving round it, as they are represented in the diagram to No. 897. He does not go into any theory of the motions of the planets; with regard to these and the fixed stars he only investigates the phenomena of their luminosity. The spherical form of the earth he takes for granted as an axiom from the first, and he anticipates Newton by pointing out the universality of Gravitation not merely in the earth, but even in the moon. Although his acute research into the nature of the moon's light and the spots on the moon did not bring to light many results of lasting importance beyond making it evident that they were a refutation of the errors of his contemporaries, they contain various explanations of facts which modern science need not modify in any essential point, and discoveries which history has hitherto assigned to a very much later date.

The ingenious theory by which he tries to explain the nature of what is known as earth shine, the reflection of the sun's rays by the earth towards the moon, saying that it is a peculiar refraction, originating in the innumerable curved surfaces of the waves of the sea may be regarded as absurd; but it must not be forgotten that he had no means of detecting the fundamental error on which he based it, namely: the assumption that the moon was at a relatively short distance from the earth. So long as the motion of the earth round the sun remained unknown, it was of course impossible to form any estimate of the moon's distance from the earth by a calculation of its parallax.

Before the discovery of the telescope accurate astronomical observations were only possible to a very limited extent. It would appear however from certain passages in the notes here printed for the first time, that Leonardo was in a position to study the spots in the moon more closely than he could have done with the unaided eye. So far as can be gathered from the mysterious language in which the description of his instrument is wrapped, he made use of magnifying glasses; these do not however seem to have been constructed like a telescope—telescopes were first made about 1600. As LIBRI pointed out (*Histoire des Sciences mathématiques* III, 101) Fracastoro of Verona (1473—1553) succeeded in magnifying the moon's face by an arrangement of lenses (compare No. 910, note), and this gives probability to Leonardo's invention at a not much earlier date.

 quāto essa sarà di piv 19lūgo moto, l'una
 che l'altra.

earth; but this force is unlimited, and
 by it infinite worlds might be moved if
 instruments could be made by which the
 force could be generated.

Force, with physical motion, and gra-
 vity, with resistance are the four external
 powers on which all actions of mortals
 depend.

Force has its origin in spiritual motion;
 and this motion, flowing through the limbs
 of sentient animals, enlarges their muscles.
 Being enlarged by this current the muscles
 are shrunk in length and contract the tendons
 which are connected with them, and this is
 the cause of the force of the limbs in man.

The quality and quantity of the force
 of a man are able to give birth to other
 forces, which will be proportionally greater
 as the motions produced by them last
 longer.

860.

Il peso · o · perchè non resta nel suo
 sito? 2non resta perchè non à resistētia;
 e dōde si mouerà? Moverassi · inverso il
 4centro; e perchè nō per altre linie? per-
 chē 5il peso, che non à resistētia, discien-
 derà 6in basso per la uia piv breuie, e 'l
 più bas'so sito è il ciētro del mondo; e
 perchè lo sa 8così tal peso trovarlo con
 tanta breuità? 9perchè non va come insen-
 sibile prima 10vagando per diverse linie.

Why does not the weight *o* remain in its
 place? It does not remain because it has no
 resistance. Where will it move to? It will
 move towards the centre [of gravity]. And
 why by no other line? Because a weight
 which has no support falls by the shortest
 road to the lowest point which is the centre
 of the world. And why does the weight know
 how to find it by so short a line? Because it
 is not independant and does not move about
 in various directions.

861.

Movasi la terra da che parte voglia,
 2mai la superfite dell'acqua uscirà fori
 della 3sua spera, ma senpre
 sarà equidistante al 4centro del
 mondo;

5¶Dato che la terra · si ri-
 movessi dal centro 6del mon-
 do, che farebbe l'acqua? ¶

7Resterebbe intorno a esso
 centro 8con equal grossezza,
 ma minore diamētro, che
 quando ella auea la terra in
 corpo.

Let the earth turn on which side it may
 the surface of the waters will never move
 from its spherical form, but will
 always remain equidistant from
 the centre of the globe.

Granting that the earth might
 be removed from the centre of
 the globe, what would happen
 to the water?

It would remain in a sphere
 round that centre equally thick,
 but the sphere would have a
 smaller diameter than when it
 enclosed the earth.

Ricordo come io ho in prima a dimo-
²strare la distantia del sole dalla terra, ³e con
 ũ de' sua razzi passati per ispi⁴racolo in loco
 oscuro ritrovare ⁵la sua quātità vera, e oltre
 a ⁶di questo per lo mezzo della sfera del
⁷l'acqua ritrovare la grādezza della terra. ¶

⁸Qui si dimostra come, quā⁹do il sole
 è nel mezzo del nostro ¹⁰emisferio, che li
 antipodi ¹¹orientali cogli occidentali ue¹²dono
 in un medesimo tempo cias¹³cun per se
 spechiare il sole nelle ¹⁴loro acque, e 'l
 simile quelli del po¹⁵lo artico col antartico,
 se abi¹⁶tatori ui sono.

Mem.: That I must first show the distance
 of the sun from the earth; and, by means
 of a ray passing through a small hole into
 a dark chamber, detect its real size; and
 besides this, by means of the aqueous sphere
 calculate the size of the globe . . .

Here it will be shown, that when the sun
 is in the meridian of our hemisphere[10], the
 antipodes to the East and to the West, alike,
 and at the same time, see the sun mirrored in
 their waters; and the same is equally true of
 the arctic and antarctic poles, if indeed they
 are inhabited.

867.

ORDINE DEL PROVARE LA TERRA ESSERE
UNA STELLA.

THE METHOD OF PROVING THAT THE EARTH
IS A STAR.

Inprima definisci l'occhio, poi mostra come il battere d'alcuna stella viene dall'occhio, e perchè il battere d'esse stelle è più nell'una che nell'altra, e come li razi delle stelle nascono dall'occhio, e di, che se l'batte delle stelle fusse come pare nelle stelle, che tal bat⁸timēto mostra d'essere di tanta dilatatione, quāt'è il corpo di tale stella; essendo adūque maggiore della terra che tal moto fatto in istante sarebbe troppo veloce a raddoppiare la grādezza di tale stella; Di poi pro¹²va come la superfite dell'aria ne' cōfini del foco, e la superfite del foco nel suo termine è quella, nella qual penetrādo li razi solari portano la similitudine di corpi celesti grāde nel loro leua¹⁶re, e però è piccola, essendo esse nel mezzo del celo; sia la terra *a n d m* sia la superfite dell'aria che confina colla sfera del foco; *h f g* sia il corso della luna o vuoi del sole; dico che quādo il sole apparisce all'orizzōte *g*, che li sono ueduti li suoi razi passare per la superfite dell'aria infra āgoli inequali cioè *o m*, il che non è in *d k*, e ancora passa per maggiore grossezza d'aria; tutto *e m* è aria più spessa.

First describe the eye; then show how the twinkling of a star is really in the eye and why one star should twinkle more than another, and how the rays from the stars originate in the eye; and add, that if the twinkling of the stars were really in the stars—as it seems to be—that this twinkling appears to be an extension as great as the diameter of the body of the star; therefore, the star being larger than the earth, this motion effected in an instant would be a rapid doubling of the size of the star. Then

prove that the surface of the air where it lies contiguous to fire, and the surface of the fire where it ends are those into which the solar rays penetrate, and transmit the images of the heavenly bodies, large when

they rise, and small, when they are on the meridian. Let *a* be the earth and *n d m* the surface of the air in contact with the sphere of fire; *h f g* is the orbit of the moon or, if you please, of the sun; then I say that when the sun appears on the horizon *g*, its rays are seen passing through the surface of the air at a slanting angle, that is *o m*; this is not the case at *d k*. And so it passes through a greater mass of air; all of *e m* is a denser atmosphere.

⁴la prospettiva naturale, le quali ⁵diminuiscono mediante la curuità del⁶occhio, che è costretto a tagliare sopra di ⁷se le piramidi di qualunque spetie che viene al ⁸occhio infra angoli retti sperici; Ma ⁹l'arte, che io insegno qui in margine, ta¹⁰glia esse piramidi con angoli retti¹¹ vicini alla superfite di tal popilla; Ma ¹²la convessa popilla dell'occhio piglia sopra ¹³di se tutto il nostro emisferio, e que¹⁴sta mostrerà solo una stella; ma doue ¹⁵molte piccole stelle si ricevono per similitudine nella superfite della popilla, ¹⁷le quali stelle son minime, questa di¹⁸mostrerà vna sola stella, ma fia grāde; ¹⁹E così la luna di maggiore grādezza, e le su²⁰e macule di più nota figura; A questo ²¹nostro ochio si debbe fare v' uetro pieno di ²²quell'acqua di che si fa mētionē ²³nel 4 del libro 113 delle cose naturali, ²⁴la quale acqua fa parere spogliate di ²⁵vetro quelle cose che son congelate nel²⁶le pallē del uetro cristallino.

diminished as in natural perspective, which diminishes them by reason of the convexity of the eye which necessarily intersects, at its surface, the pyramid of every image conveyed to the eye at a right angle on its spherical surface. But by the method I here teach in the margin [9] these pyramids are intersected at right angles close to the surface of the pupil. The convex pupil of the eye can take in the whole of our hemisphere, while this will show only a single star; but where many small stars transmit their images to the surface of the pupil those stars are extremely small; here only one star is seen but it will be large. And so the moon will be seen larger and its spots of a more defined form [20]. You must place close to the eye a glass filled with the water of which mention is made in number 4 of Book 113 "On natural substances" [23]; for this water makes objects which are enclosed in balls of crystalline glass appear free from the glass.

DELL' OCHIO.

²⁸Infra li corpi minori della popilla dell'occhio ²⁹quella fia manco nota a essa popilla, ³⁰la quale le sarà più vicina || E con questa ³¹speriētia ci si è fatto noto che la virtù visiva nō ³²si riducie in pūto perchè se la ecc.;

OF THE EYE.

Among the smaller objects presented to the pupil of the eye, that which is closest to it, will be least appreciable to the eye. And at the same time, the experiments here made with the power of sight, show that it is not reduced to speck if the &c. [32].

Read in the margin.

[34] Those objects are seen largest which come to the eye at the largest angles.

But the images of the objects conveyed to the pupil of the eye are distributed to the pupil exactly as they are distributed in the air: and the proof of this is in what follows; that when we look at the starry sky, without gazing more fixedly at one star than another, the sky appears all strewn with stars; and their proportions to the eye are the same as in the sky and likewise the spaces between them [61].

23. *libro 113*. This is perhaps the number of a book in some library catalogue. But it may refer, on the other hand, to one of the 120 Books mentioned in No. 796. l. 84.

F. 604]

870.

PROSPETTIVA.

²Delle cose remosse dall'occhio con eguale di³stantia, quella parrà esser mē dimin⁴vita che prima era più.

⁵Delle cose remosse dall'occhio con equal di⁶stantia dal lor primo sito quella mē diminuisce ⁷che prima era più distante da esso occhio; E tal ⁸fia la proportione della diminutione, qual fū ⁹la proportione delle distantie ch'esse aveā da¹⁰l'occhio auanti il loro moto.

¹¹Come dire il corpo *t* e 'l corpo *e* e ¹²che la proportiō delle lor distantie dall'occhio *a* ¹³è quitupla; io rimovo ciascū dal suo sito ¹⁴e lo fo più distante dal-

l'occhio vno d'essi ⁵ in che è ¹⁵ diuisa la propositione; accade dūque che il più vicino ¹⁶all'occhio avrà doppiata la distantia, e per la penulti¹⁷ma di questo esso è diminuto la metà del suo tutto, ¹⁸e 'l corpo *e* per lo medesimo moto è diminuito ¹⁹ $\frac{1}{5}$ d'esso suo tutto; adūque per la detta penultima ²⁰è vero quel che in questa vltima s'è proposto; ²¹e questo dico per li moti de' corpi celesti ²²in 3500 miglia di distātia che piv essē²³do in oriēte che sopra di noi, non crescono o diminuiscono ²⁴con sensibile dimostratione.

PERSPECTIVE.

Among objects moved from the eye at equal distance, that undergoes least diminution which at first was most remote.

When various objects are removed at equal distances farther from their original position, that which was at first the farthest from the eye will diminish least. And the proportion of the diminution will be in proportion to the relative distance of the objects from the eye before they were removed.

That isto say in the object *t* and the object *e* the proportion of their distances from the eye *a* is quintuple. I remove each from its place and set it farther from the eye by one of the 5 parts

into which the proposition is divided. Hence it happens that the nearest to the eye has doubled the distance and according to the last proposition but one of this, is diminished by the half of its whole size; and the body *e*, by the same motion, is diminished $\frac{1}{5}$ of its whole size. Therefore, by that same last proposition but one, that which is said in this last proposition is true; and this I say of the motions of the celestial bodies which are more distant by 3500 miles when setting than when overhead; and yet do not increase or diminish in any sensible degree.

875.

The waves in water magnify the image of an object reflected in it.

Let *a* be the sun, and *n m* the ruffled water, *b* the image of the sun when the water is smooth. Let *f* be the eye which sees the image in all the waves included within the base of the triangle *c e f*. Now the sun reflected in the unruffled surface occupied the space *c d*, while in

the ruffled surface it covers all the watery space *c e* (as is proved in the 4th of my

873. Lines 5 and 6 are thus rendered by M. RAVAISSON in his edition of MS. A. "*De même, aucune chose ne croît dans l'eau plâne, et tu en feras l'expérience en calquant un ais sous l'eau.*"—Compare the diagrams in Vol. I, p. 114.

874. 10. Here the text breaks off; lines 11 and fol. are written in the margin.

875. In the original sketch, inside the circle in

the first diagram, is written *Sole* (sun), and to the right of it *luna* (moon). Thus either of these heavenly bodies may be supposed to fill that space. Within the lower circle is written *simulacro* (image). In the two next diagrams at the spot here marked *L* the word *Luna* is written, and in the last *sole* is written in the top circle at *a*.

della mia prospettiva), e tanto più occuperebbe d'acqua quanto esso simulacro fusse più distate dall'occhio.

¹¹¶ Il simulacro del sole si dimostrerà più lucido nell'onde minute che nelle onde grandi ¶; E questo accade perchè le similitudini over simulacri del sole sono più spesse nell'onde minute ¹⁴che nelle grandi, e li più spessi splendori rendono maggiore ¹⁵lume che li splendori più rari.

¹⁶L'onde intersegate a uso di scorza di pigna rendono il ¹⁷simulacro del sole di grandissimo splendore, ¹⁸e questo accade perchè tanto son li simulacri quanto son li gio¹⁹ghi del'onde vedute dal sole, e

“Perspective”) [9] and it will cover more of the water in proportion as the reflected image is remote from the eye [10].

The image of the sun will be more brightly shown in small waves than in large ones—and this is because the reflections or images of the sun are more numerous in the small waves than in large ones, and the more numerous reflections of its radiance give a larger light than the fewer.

Waves which intersect like the scales of a fir cone reflect the image of the sun with the greatest splendour; and this is the case because the images are as many as the ridges of the waves on which the sun

l'ombre che infra esse onde s'inter²⁰pongono sōn piccole e di poca oscurità, e li splendori di tanti ²¹simulacri insieme s'infondono nelle similitudini che di lor ²²viene all'occhio, in modo tale che esse òbre sono insensibili; ¶

²³Quel simulacro del sole occuperà ²⁴più lochi nella superfittie dell'acqua, che ²⁵sarà più distante dall'occhio che lo uede; ²⁶a sia il sole, *p q* è il simulacro d'esso ²⁷sole, *a b* è la superfittie dell'acqua doue il sol ²⁸si spechia, *r* sia l'occhio che uede esso ²⁹simulacro nella superfittie dell'acqua occupare ³⁰lo spatio *o m*; *c* è l'occhio più remoto ³¹da essa superfittie dell'acqua, e così dal simulacro, onde esso simulacro ³²occupa maggiore spatio d'acqua,—quāto è lo spatio *n o*.

shines, and the shadows between these waves are small and not very dark; and the radiance of so many reflections together becomes united in the image which is transmitted to the eye, so that these shadows are imperceptible.

That reflection of the sun will cover most space on the surface of the water which is most remote from the eye which sees it.

Let *a* be the sun, *p q* the reflection of the sun; *a b* is the surface of the water, in which the sun is mirrored, and *r* the eye which sees this reflection on the surface of the water occupying the space *o m*. *c* is the eye at a greater distance from the surface of the water and also from the reflection; hence this reflection covers a larger space of water, by the distance between *n* and *o*.

876.

È possibile è ²che tan³to quāto il sole allumina ⁴dello specchio sperico, ⁵tāto d'esso specchio ⁸ab⁶bia a risplendere, ⁷se già esso specchio ⁸non fusse ⁹ōdāte o globulēto;

¹⁰Vedi qui il so¹¹le allumina¹²re la luna, s¹³pecchio speric¹⁴o, e tan¹⁵to quāto es¹⁶so sole ne ¹⁷uede, tāto ne ¹⁸fa splēdere;

¹⁹Qui si concluderà che ciò che della luna ²⁰splende è acqua simile a quella deg²¹li nostri mari, e così inōdata, cioè ²²che di lei non splende sone isole e ter²³ra ferma.

It is impossible that the side of a spherical mirror, illuminated by the sun, should reflect its radiance unless this mirror were undulating or filled with bubbles.

You see here the sun which lights up the moon, a spherical mirror, and all of its surface, which faces the sun is rendered radiant.

Whence it may be concluded that what shines in the moon is water like that of our seas, and in waves as that is; and that portion which does not shine consists of islands and terra firma.

²⁴Questa dimostrazione di tanti corpi sperici interposti infra l'occhio ²⁵e 'l sole è fatta per mostrare che, siccome in ciascuno d'essi ²⁶corpi si uede il simulacro del sole, così si può vedere esso simulacro in cia²⁷scuna globosità dell'onde del mare; come in molti di questi sperici si ²⁸uedonò molti soli, così in molte onde si uedono molti lustri, li quali in molta ²⁹distanzia, ciascū lustro per se, si fanno grādi all'occhio e, così faciēdo ciascu³⁰na onda, si uengono a con-

This diagram, of several spherical bodies interposed between the eye and the sun, is given to show that, just as the reflection of the sun is seen in each of these bodies, in the same way that image may be seen in each curve of the waves of the sea; and as in these many spheres many reflections of the sun are seen, so in many waves there are many images, each of which at a great distance is much magnified to the eye. And, as this happens with each wave, the spaces

THE SUN.

F. 5a]

879.

LAUDE DEL SOLE.

IN PRAISE OF THE SUN.

The question of the true and of the apparent size of the sun (879-884).

² Se guarderai le stelle senza razzi (come si fa a veder³le per un piccolo foro fatto colla strema pūta da⁴la sottile aguglia, e questo posto quasi a toccare l'occhio), ⁵ tu uedrai esse stelle essere tanto minime che nul⁶la cosa pare essere minore, e ueramēte la lūga di⁷stātia le fa ragionevolmente diminuire, ancorachè ⁸molte vi sono che son moltissime volte maggiori che la ⁹stella cioè la terra coll'acqua; ora pensa quel che par¹⁰rebbe essa nostra stella in tāta distantia, e conside¹¹ra poi, quāte stelle si metterebbero e per longitudine e la¹²titudine infra esse stelle, le quali sono semina¹³te per esso spatio tenebroso; mai nō posso fare ¹⁴ch'io non biasimi molti di quelli antichi, li quali disse¹⁵ro che 'l sole non avea altra grādezza che quella che ¹⁶mostra, ĩfra quali fu Epicuro, e credo che caua¹⁷si tale ragione da vn lume posto in questa nostra a¹⁸ria, equidistāte al cētro; chi lo uede, non lo uede mai di¹⁹minuito di grādezza in nessuna distātia; e le ragi-

If you look at the stars, cutting off the rays (as may be done by looking through a very small hole made with the extreme point of a very fine needle, placed so as almost to touch the eye), you will see those stars so minute that it would seem as though nothing could be smaller; it is in fact their great distance which is the reason of their diminution, for many of them are very many times larger than the star which is the earth with water. Now reflect what this our star must look like at such a distance, and then consider how many stars might be added—both in longitude and latitude—between those stars which are scattered over the darkened sky. But I cannot forbear to condemn many of the ancients, who said that the sun was no larger than it appears; among these was Epicurus, and I believe that he founded his reason on the effects of a light placed in our atmosphere equidistant from the centre of the earth. Any one looking at it never sees it diminished in size at whatever distance; and the rea-

879. 1. lalde. 2. razi. 3. picholo. 4. acuchia ecque posto . . attoccare. 6. lūgha dis. 7. stātia dalloro ragionevole diminuire ne anchora che. 8. magore chella. 9. coe . . aq"ta" . . che pa. 11. metterebbe e per . . ella. 14. quali diso. 15. no chel sole . . grādeza. 16. mostra [alla] ĩfra. 18. noluede. 19. minuto . . grādeza inessuna . . elle.

879-882. What Leonardo says of Epicurus—who according to LEWIS, *The Astronomy of the ancients*, and MÄDLER, *Geschichte der Himmelskunde*, did not devote much attention to the study of ce-

lestial phenomena—, he probably derived from Book X of Diogenes Laertius, whose *Vitae Philosophorum* was not printed in Greek till 1533, but the Latin translation appeared in 1475.

880.

oni della sua grandezza e virtù le riseruo nel ²4° libro; ma bē mi maraviglio che Socrate biasi³masse questo tal corpo, e che dicesse quello esse⁴re a similitudine di pietra infocata, e certo, chi ⁵l'oppose di tal errore poco peccò; Ma io vorrei ⁶avere vocabuli che mi seruissero a biasimare quelli che vogliono laudare più lo adorare li omini che ⁸tal sole, nō uedēdo nell'uniuerso corpo ⁹di maggiore magnitudine e virtù di quello; e 'l ¹⁰suo lume allumina tutti li corpi celesti che per l'u¹¹niuerso si cōpartono; tutte l'anime discēdono da lui, ¹²perchè il caldo ch'è in nelli animali viui viē dall'ani¹³me, e nessuno altro caldo nè lume è nell'u¹⁴niuerso, come mostrerò nel 4° libro, e cier¹⁵to costoro che anno voluto adorare uomimi per i dei ¹⁶come Giove Saturno Marte e simili anno fatto grā¹⁷dissimo errore, vedēdo che ancorachè l'omo fus¹⁸se grande quāto il nostro mōdo, che parrebbe simi¹⁹le a vna minima stella, la qual pare vn pūto nell'uni²⁰uerso, e ancora vedendo essi omini mortali e ²¹putridi e corruttibili nelle lor sepulture.

²²Luspera (?) ²³e Marcello ²⁴lauda cō m²⁵olti altri ²⁶esso sole.

sons of its size and power I shall reserve for Book 4. But I wonder greatly that Socrates[2] should have depreciated that solar body, saying that it was of the nature of incandescent stone, and the one who opposed him as to that error was not far wrong. But I only wish I had words to serve me to blame those who are fain to extol the worship of men more than that of the sun; for in the whole universe there is nowhere to be seen a body of greater magnitude and power than the sun. Its light gives light to all the celestial bodies which are distributed throughout the universe; and from it descends all vital force, for the heat that is in living beings comes from the soul [vital spark]; and there is no other centre of heat and light in the universe as will be shown in Book 4; and certainly those who have chosen to worship men as gods—as Jove, Saturn, Mars and the like—have fallen into the gravest error, seeing that even if a man were as large as our earth, he would look no bigger than a little star which appears but as a speck in the universe; and seeing again that these men are mortal, and putrid and corrupt in their sepulchres.

Marcellus[23] and many others praise the sun.

880. 2. *Socrates*; I have little light to throw on this reference. Plato's Socrates himself declares on more than one occasion that in his youth he had turned his mind to the study of celestial phenomena (Μετέωρα) but not in his later years (see G. C. LEWIS, *The Astronomy of the ancients*, page 109; MÄDLER, *Geschichte der Himmelskunde*, page 41). Here and there in Plato's writings we find incidental notes on the sun and other heavenly bodies. Leonardo may very well have known of these, since the Latin version by Ficinus was printed as early as 1491; indeed an undated edition exists which may very likely have appeared between 1480—90.

There is but one passage in Plato, *Epinomis* (p. 983) where he speaks of the physical properties of the sun and says that it is larger than the earth.

Aristotle who goes very fully into the subject says the same. A complete edition of Aristotele's works was first printed in Venice 1495—98, but a Latin version of the Books *De Coelo et Mundo* and *De Physica* had been printed in Venice as early as in 1483 (H. MÜLLER-STRÜBING).

23. I have no means of identifying *Marcello* who is named in the margin. It may be Nonius Marcellus, an obscure Roman Grammarian of uncertain date (between the IInd and Vth centuries A. C.) the author of the treatise *De compendiosa doctrina per litteras ad filium* in which he treats *de rebus omnibus et quibusdam aliis*. This was much read in the middle ages. The *editio princeps* is dated 1470 (H. MÜLLER-STRÜBING).

881. In the original the writing is across the diagram.

tale òbra; essendo adunque il còcorso del-
l'òbre parallelo dall'suo nascimèto al suo
fine, ³li parue da giudicare che 'l sole an-
còra lui fusse fròte di tal paralel^o, e per
còsequēza non essere piv gros^oso di tal
colonna, e nò s'avvide che tal ⁹diminuitiōne

shadows were cast; and the breadth of the
shadows being parallel from beginning to
end, he thought he might infer that the sun
also was directly opposite to this parallel
and that consequently its breadth was not
greater than that of the column; not perceiv-
ing that the diminution in the shadow was

d'òbra era insēsibile ¹⁰per la lunga distan-
tia del sole; ¹¹se 'l sole fusse minore della
terra, le stelle ¹²di grā parte del nostro
emisferio sarebbero sã¹³za lume; còtro a
Epicuro che dice, tãto è ¹⁴grāde il sole,
quãto e' pare.

insensibly slight by reason of the remoteness
of the sun. If the sun were smaller than
the earth, the stars on a great portion of our
hemisphere would have no light, which is
evidence against Epicurus who says the sun
is only as large as it appears.

F. 84]

882.

Dice Epicuro il sole essere tãto quãto
esso si dimostra; a²dunque e'pare essere
vn piè, e così l'abbiamo a tenere; ³segui-
rebbe che la luna quãd'ella fa oscurare il
sole, il so⁴le non l'avāzerebbe di grādezza
come e' fa, onde, sendo ⁵la luna minor del
sole, essa luna sarebbe meno d'un piede,
⁶e per consequēza quando il nostro mōdo
fa oscurare la lu⁷na, sarebbe minore a un
dito del piedi, concio sia se 'l so⁸le è un
piede, e la nostra terra fa onbra piramidale
in⁹verso la luna, egli è necessario che sia
maggiore il lumi¹⁰noso, causa della pira-
mide òbrosa, che l'opaco, causa d'essa ¹¹pi-
ramide.

Epicurus says the sun is the size it looks.
Hence as it looks about a foot across we
must consider that to be its size; it would
follow that when the moon eclipses the sun,
the sun ought not to appear the larger, as
it does. Then, the moon being smaller than
the sun, the moon must be less than a foot,
and consequently when our world eclipses
the moon, it must be less than a foot by a
finger's breadth; inasmuch as if the sun is a foot
across, and our earth casts a conical shadow
on the moon, it is inevitable that the lumi-
nous cause of the cone of shadow must be
larger than the opaque body which casts the
cone of shadow.

882. 2. labia no attenere. 3. seguirebe chella. 4. nollauāzerebbe. . . grādeza chome. 5. medun piedi. 6. chonsequēza . . . oscurar.

F. 106]

883.

Misura quāti soli si metterebbero ² nel corso suo di 24 ore.

³Fa vn circolo e voltalo a mezzodi, come sō ⁴li orologi da sole, e metti vna bacchetta in ⁵mezzo, in modo che la sua lūghezza si di⁶rizzi al cētro di tal cerchio, e nota l'on⁷bra che fa il sole d'essa bacchetta sopra la ⁸circūferētia di tale cerchio, che sarà ⁹l'onbra larga, diciamo tutto *a n*; ora ¹⁰misura quante volte tale obra entra in ¹¹tale circūferētia di cerchio, e tate vol¹²te fia il numero che 'l corpo solare entrerà nel ¹³corso suo in 24 ore; e qui si potrà ¹⁴vedere, se Epicuro disse, che 'l sole era ¹⁵tanto grande quāto esso pareo | che, pa¹⁶rendo il diametro del sole vna misura ¹⁷pedale, e che esso sole entrasse mille ¹⁸volte nel suo corso di 24 ore, egli avre¹⁹bbe corso mille piedi, cioè 300 braccia che ²⁰è vn sesto di miglio; ora ecco che 'l cor²¹so del sole infra dì e notte sarebbe ²²la sesta parte d'ū miglio, ²³e questa venerabile lumaca del sōle av²⁴rebbe caminato 25 braccia per ora.

To measure how many times the diameter of the sun will go into its course in 24 hours.

Make a circle and place it to face the south, after the manner of a sundial, and place a rod in the middle in such a way as that its length points to the centre of this circle, and mark the shadow cast in the sunshine by this rod on the circumference of the circle, and this shadow will be—let us say—as broad as from *a* to *n*. Now measure how many times this shadow will go into this circumference of a circle, and that will give you the number of times that the solar body will go into its orbit in 24 hours. Thus you may see whether Epicurus was

[right in] saying that the sun was only as large as it looked; for, as the apparent diameter of the sun is about a foot, and as that sun would go a thousand times into the length of its course in 24 hours, it would have gone a thousand feet, that is 300 braccia, which is the sixth of a mile. Whence it would follow that the course of the sun during the day would be the sixth part of a mile and that this venerable snail, the sun will have travelled 25 braccia an hour.

884. Poseidonius of Apamea, commonly called the Rhodian, because he taught in Rhodes, was a Stoic philosopher, a contemporary and friend of Cicero's, and the author of numerous works on natural science, among them: Φυσικὸς λόγος, περὶ κόσμου, περὶ μετεώρων.

Strabo quotes no doubt from one of his works, when he says that Poseidonius explained how it was that the sun looked larger when it was rising or setting than during the rest of its course (III, p. 135).

Kleomedes, a later Greek Naturalist also mentions this observation of Poseidonius' without naming the title of his work; however, as Kleomedes' *Cyclia Theorica* was not printed till 1535, Leonardo must have derived his quotation from Strabo. He probably wrote this note in 1508, and as the original Greek was first printed in Venice in 1516, we must suppose him to quote here from the translation by Guarinus Veronensis, which was printed as early as 1471, also at Venice (H. MÜLLER-STRÜBING).

per ⁵lo splendore del corpo solare, nel ⁶qual nō si può fermare l'occhio vmano, ⁷e oltre a di questo manifestissima⁸mēte lo dimostrano li sua razzi refle⁹ssi dalli specchi concavi, li quali, quā¹⁰do la lor percussione sarā di tāto sp¹¹lendere, che l'occhio non lo possa soppo¹²rtare, allora essa percussione ¹³avrā splendore simile al sole nel ¹⁴suo propio sito; e che sia vero, pro¹⁵vo che se tale specchio à la sua ¹⁶cōcavitā tal qual si richiede alla ¹⁷generatione di tale razzo, allora ¹⁸nessuna cosa creata reggerà ¹⁹alla caldezza di tale percussione ²⁰di razzo reflexo d'alcuno specchio; ²¹e se tu dirai che lo specchio anco²²ra lui è freddo e gitta i razzi caldi, io ²³ti rispondo, che 'l razzo viē dal sole ed è ²⁴il razzo ²⁵dello spec²⁶chio conca²⁷vo, passa²⁸to ²⁹a traver³⁰so della ³¹finestra.

action] is abundantly proved by the radiance of the solar body on which the human eye cannot dwell and besides this no less manifestly by the rays reflected from a concave mirror, which—when they strike the eye with such splendour that the eye cannot bear them—have a brilliancy equal to the sun in its own place. And that this is true I prove by the fact that if the mirror has its concavity formed exactly as is requisite for the collecting and reflecting of these [rays, no created being could endure the heat that strikes from the reflected rays of such a mirror. And if you argue that the mirror itself is cold and yet send forth hot rays, I should reply that those rays come really from the sun and that it is the ray of the concave mirror after having passed through the window.

892. In the diagram Leonardo wrote *sole* at the place marked *A*.

9l'ochio in tanta larghezza nell'āgolo dell'ochio quanto nell'ultima somma ¹⁰dell'ōde all'orizzōte, è per questo nō māca che tale splendore solare ri¹¹flesso dall'ōde marittime nō sia di figura piramidale e per conseguē¹²za in ogni grado di distātia non acquisti gradi di larghezza ācorachè ¹³inquāto al nostro vedere si dimostri parallelo.

¹⁴1^a ¶ Nessū lievissimo ¹⁵è opaco; ¶

¹⁶2^a ¶ Nessū più lieve sta ¹⁷sotto al mē lieve; ¶

¹⁸3^a ¶ Se la luna à sito ¹⁹in mezzo ai sua ele²⁰mēti o no;

²¹e s'ella non à sito ²²particolare co²³me la terra nelli sua ²⁴elemēti, perchè nō ca²⁵de al cietro de' nostri ²⁶elemēti?

²⁷E se la luna non è ²⁸in mezzo alli sua elemē²⁹ti e nō discēde, ³⁰adūque ella è più ³¹lieve che altro elemē³²to;

³³E se la luna è più lie³⁴ve che altro elemēto, per³⁵chè è solida e nō traspare.

³⁶¶ Delle cose di varie grādezze che, poste in varie distātie, ³⁷si mostrano equali, tal proportione fia da distātia a distā³⁸tia, qual fia da magnitudine a magnitudine. ¶

width at the angle nearest to the eye, as at the highest line of the waves on the horizon; but notwithstanding this the solar rays reflected from the waves of the sea assume the pyramidal form and consequently, at each degree of distance increase proportionally in size, although to our sight, they appear as parallel.

1st. Nothing that has very little weight is opaque.

2^{dly}. Nothing that is excessively weight can remain beneath that which is heavier.

3^{dly}. As to whether the moon is situated in the centre of its elements or not.

And, if it has no proper place of its own, like the earth, in the midst of its elements, why does it not fall to the centre of our elements [26]?

And, if the moon is not in the centre of its own elements and yet does not fall, it must then be lighter than any other element.

And, if the moon is lighter than the other elements why is it opaque and not transparent?

When objects of various sizes, being placed at various distances, look of equal size, there must be the same relative proportion in the distances as in the magnitudes of the objects.

F. 93a]

893.

DELLA LUNA E SE ELLA È PULITA E SPERICA.

OF THE MOON AND WHETHER IT IS POLISHED AND SPHERICAL.

²Il simulacro del sole in lei è potētemente luminoso ed è in piccola parte della su⁴a superfittie; E la prova vedrai a tor⁵re vna palla d'oro brunito, posta nel⁶le tenebre, con vn lume da lei remoto, ⁷il quale ancorachè esso allumini circa ⁸la metà d'essa palla, l'ochio non lo uede, se nō ⁹in piccola parte della sua superfittie, e tut¹⁰to il resto di tal superfittie spechia le tenebre ¹¹che la circūdano, e per questo in lei solo appā¹²risce il simulacro del lume e tutto il re¹³sto rimane invisibile, stando l'ochio remo¹⁴to da tal palla; Questo medesimo interue¹⁵rebbe nella superfittie della luna, essendo po¹⁶lita, lustra e densa, come son corpi che spe¹⁷chiano;

The image of the sun in the moon is powerfully luminous, and is only on a small portion of its surface. And the proof may be seen by taking a ball of burnished gold and placing it in the dark with a light at some distance from it; and then, although it will illuminate about half of the ball, the eye will perceive its reflection only in a small part of its surface, and all the rest of the surface reflects the darkness which surrounds it; so that it is only in that spot that the image of the light is seen, and all the rest remains invisible, the eye being at a distance from the ball. The same thing would happen on the surface of the moon if it were polished, lustrous and opaque, like all bodies with a reflecting surface.

Br. M. 946]

896.

DELLA LUNA.

OF THE MOON.

²La luna non à lume da se, se nō quāto ne vede il sole tanto l'allumina, ³della qual luminosità tanto ne vediamo quāto è quella che vede noi; ⁴E la sua notte ricieve tanto di splēdore, quāto è quello che li prestano le nostre acque nel rifletterli il simulacro del sole, che in ⁶tutte quelle che vedono il sole e la luna, si spechia; ⁷La pelle over superfite dell'acqua, di che si cōpone il mare della luna e il ⁸mare della nostra terra, è senpre rugoso, ⁹o poco o assai, o più, o meno, e tale rugosità è cavsā di dila¹⁰tare l'innumerabili simulacri del sole, che nei colli e cōcavitā e la¹¹ti e frōti delle innumerabili rughe si spechiano, cioè in tātī vari siti di ciascuna ¹²ruga quāto son vari li siti che àno li ochi che le vedono, ¹³l che ac¹³cadere nō potrebbe, se la spera dell' acqua, che ī grā parte di se veste la ¹⁴luna fusse d'uniforme sphericità, perchè allora il simulacro del ¹⁵sole sarebbe uno a ciascuno occhio, e la sua reflessione sarebbe particu¹⁶lare e senpre sarebbe splēdore sperico, come manifestamē¹⁷te ci assegnano le palle dorate, poste nelle sommitā delli alti edifiti; Ma ¹⁸se tali palle dorate fussino rugose o globulēti come son le mo¹⁹re, frutti neri conposti di minute globositā rotonde, allora ciascuna delle parti d'essa ²⁰globositā, vedute dal sole e dall'occhio, mostrerà a esso occhio il lustro ²¹gienerato dal simulacro d'esso sole, e così in ū medesimo corpo si ue²²drebbeno molti minimi soli, li quali spesse sō le volte che per lunga distātia ²³si uniscono e paiono cōtinuati; E ²⁴l lustro della luna nuova è più lucido e più potēte che quādo è in plenilunio, e questo si ca²⁵vsa perchè l'angolo della incidētia è molto più ottuso nella luna nuo²⁶va che nella vecchia, doue tali angoli sono acutissimi; e l'onde della ²⁷luna spechiano il sole così nelle lor ualli come nelli colli, e li lati ²⁸restano oscuri; ma ne' lati della luna li fondi dell'onde non ²⁹vedono il sole, ma

The moon has no light in itself; but so much of it as faces the sun is illuminated, and of that illumined portion we see so much as faces the earth. And the moon's night receives just as much light as is lent it by our waters as they reflect the image of the sun, which is mirrored in all those waters which are on the side towards the sun. The outside or surface of the waters forming the seas of the moon and of the seas of our globe is always ruffled little or much, or more or less—and this roughness causes an extension of the numberless images of the sun which are repeated in the ridges and hollows, the sides and fronts of the innumerable waves; that is to say in as many different spots on each wave as our eyes find different positions to view them from. This could not happen, if the aqueous sphere which covers a great part of the moon were uniformly spherical, for then the images of the sun would be one to each spectator, and its reflections would be separate and independent and its radiance would always appear circular; as is plainly to be seen in the gilt balls placed on the tops of high buildings. But if those gilt balls were rugged or composed of several little balls, like mulberries, which are a black fruit composed of minute round globules, then each portion of these little balls, when seen in the sun, would display to the eye the lustre resulting from the reflection of the sun, and thus, in one and the same body many tiny suns would be seen; and these often combine at a long distance and appear as one. The lustre of the new moon is brighter and stronger, than when the moon is full; and the reason of this is that the angle of incidence is more obtuse in the new than in the full moon, in which the angles [of incidence and reflection] are highly acute. The waves of the moon therefore mirror the sun in the hollows of the waves as well as on the ridges, and the sides remain in shadow. But at the sides

solo uedono le cime d'esse òde, e per questo li simu³⁰lacri son più rari e più misti coll'onbre delle valli, e tal mistione delle spetie òbrose e luminose, così insieme infuse, vengono all'occhio cō poco splēdore, e nelli stremi sarā piv oscure per essere ³³la curuità de' lati di tale òde insufficiente a riflettere all'occhio li razi³⁴cievuti razzi; La luna nova per natura riflette li ³⁵razi solari più inverso l'occhio per tali

of the moon the hollows of the waves do not catch the sunlight, but only their crests; and thus the images are fewer and more mixed up with the shadows in the hollows; and this intermingling of the shaded and illuminated spots comes to the eye with a mitigated splendour, so that the edges will be darker, because the curves of the sides of the waves are insufficient to reflect to the eye the rays that fall upon them. Now the new moon naturally reflects the solar rays more directly towards the eye from the

òde streme, ³⁶che per nessuno altro loco, come mostra la figura della luna che ³⁷percuōtēdo con razi *a* nell'onda *b* riflette in *b d*, dou' è situa³⁸to l'occhio *d*; E questo accadere nō può nel plenilunio dove ³⁹il razzo solare, stando all'occidēte, percuote l'onde streme della ⁴⁰luna all'oriēte dal *n* in *m*, e non riflette inverso l'oc⁴¹chio occidētale, ma risalta all'oriēte, poco piegādo la rettitu⁴²dine d'esso razzo solare, e così l'angolo della incidētia è grossissimo.

⁴³La luna è corpo opa⁴⁴co e solido, e se per lo a⁴⁵versario ella fusse trāspa⁴⁶rente, ella nō riceverebbe ⁴⁷il lume del sole.

⁴⁸Il rossume over tuorlo dell'o⁴⁹vo sta ⁵⁰in mezzo al suo al⁵¹bume senza discēdere ⁵²d'alcuna parte, ed è pi⁵³v lieve o più grave o eguale d'esso ⁵⁴albume; e s'elli è più li⁵⁵veve egli dovrebbe surgie⁵⁶re sopra tutto l'albume e ⁵⁷fermarsi in cōtatto del-

crests of the waves than from any other part, as is shown by the form of the moon, whose rays *a* strike the waves *b* and are reflected in the line *b d*, the eye being situated at *d*. This cannot happen at the full moon, when the solar rays, being in the west, fall on the extreme waters of the moon to the East from *n* to *m*, and are not reflected to the eye in the West, but are thrown back eastwards, with but slight deflection from the straight course of the solar ray; and thus the angle of incidence is very wide indeed.

The moon is an opaque and solid body and if, on the contrary, it were transparent, it would not receive the light of the sun.

The yellow or yolk of an egg remains in the middle of the albumen, without moving on either side; now it is either lighter or heavier than this albumen, or equal to it; if it is lighter, it ought to rise above all the albumen and stop in contact with the shell

in modo che tanto quanto esso sol ne allumina, ⁴tanto essa luna ne specchia, se già tal luna ⁵non avesse la superfite alta a specchiare, ⁶che fusse rugosa, a vso di superfite di mare, ⁷quando in parte è mossa dal uento].

⁸[L'onde dell' acqua crescono ⁹il simularcro della cosa ¹⁰in lei specchiata].

¹¹Quest'onde fanno per o¹²gni linia a similitu¹³dine della spoglia del¹⁴la pina.

¹⁵Queste son 2 figure sicchè¹⁶faraile l'una diversa dall' altra, ¹⁷coll' acqua ¹⁸ondeggiante e coll' acqua piana.

¹⁹Impossibil'è ²⁰che per alcuna distantia il ²¹simularcro del sole, ²²fatto nella superfite ²³del corpo sperico, occupi ²⁴la metà d'esso sperico;

²⁵Qui tu ài a provare, come la terra fa tutti ²⁶questi medesimi ofiti inverso la luna che ²⁷la luna inverso la terra;

²⁸Nō luce la luna col suo lume riflesso come ²⁹fa il sole, perchè il lume della luna non piglia ³⁰il lume del sole continuo in nel³¹la superfite, ma in sù colmi e cavi del³²le onde delle acque, e per esser tal sole nella ³³luna cōfusamente spechiato per le mi³⁴stioni' delle onbre, che sono infra ³⁵l'onde che lustrano, perciò non è ³⁶il suo lume lucido e chiaro ³⁷com'è 'l sole.

³⁸Terra infra la luna in quita decima e il sole; ³⁹Qui il sole è nel levante e la luna in ponente in quita decima; ⁴⁰luna infra la terra in quita decima e il sole; ⁴¹Qui è la luna che à il sole per ponēte e la terra per levāte.

in such a way as that so much of its surface as is illuminated by the sun, should reflect the sun unless the moon had a surface adapted to reflect it—in waves and ridges, like the surface of the sea when its surface is moved by the wind.

The waves in water multiply the image of the object reflected in it.

These waves reflect light, each by its own line, as the surface of the fir cone does [14].

These are 2 figures one different from the other; one with undulating water and the other with smooth water.

It is impossible that at any distance the image of the sun cast on the surface of a spherical body should occupy the half of the sphere.

Here you must prove that the earth produces all the same effects with regard to the moon, as the moon with regard to the earth.

The moon, with its reflected light, does not shine like the sun, because the light of the moon is not a continuous reflection of that of the sun on its whole surface, but only on the crests and hollows of the waves of its waters; and thus the sun being confusedly reflected, from the admixture of the shadows that lie between the lustrous waves, its light is not pure and clear as the sun is.

[38]The earth between the moon on the fifteenth day and the sun. [39]Here the sun is in the East and the moon on the fifteenth day in the West. [40]The moon on the fifteenth [day] between the earth and the sun. [41]Here it is the moon which has the sun to the West and the earth to the East.

larger in proportion as it is re-
 mote. It is easy to understand
 that every planet and star is
 farther from us when in the
 West than when it is overhead,
 by about 3500 miles, as is pro-
 ved on the margin [7], and if you
 see the sun or moon mirrored in
 the water near to you, it looks

to you of the same
 size in the water
 as in the sky. But
 if you recede to the
 distance of a mile,
 it will look 100
 times larger; and
 if you see the sun
 reflected in the sea

at sunset, its image would look
 to you more than 10 miles long;
 because that reflected image ex-
 tends over more than 10 miles
 of sea. And if you could stand
 where the moon is, the sun would
 look to you, as if it were reflec-
 ted from all the sea that it illumi-
 nates by day; and the land amid
 the water would appear just like
 the dark spots that are on the
 moon, which, when looked at
 from our earth, appears to men
 the same as our earth would ap-
 pear to any men who might dwell
 in the moon.

DELLA QUALITÀ · DELLA · LUNA.

OF THE NATURE OF THE MOON.

¹⁸La luna quãdo · è tutta · lu-
 minata · al nostro vedere, noi ve-
 diamo tutto il suo ¹⁹giorno, e
 allora per riflessione de' razzi

 è luce piv noce.

When the moon is entirely light-
 ed up to our sight, we see its
 full daylight; and at that time,
 owing to the reflection of the so-
 lar rays which fall on it and are
 thrown off towards us, its ocean
 casts off less moisture towards us;
 and the less light it gives the
 more injurious it is.

900.

OF THE MOON.

All my opponent's arguments to say that there is no water in the moon.

901.

Answer to Maestro Andrea da Imola, who said that the solar rays reflected from a convex mirror are mingled and lost at a short distance; whereby it is altogether denied that the luminous side of the moon is of the nature of a mirror, and that consequently the light is not produced by the innumerable multitude of the waves of that sea, which I declared to be the portion of the moon which is illuminated by the solar rays.

Let *o p* be the body of the sun, *c n s* the moon, and *b* the eye which, above the base *c n* of the cathetus *c n m*, sees the body of the sun reflected at equal angles *c n*; and the same again on moving the eye from *b* to *a*.

902.

OF THE MOON.

No solid body is less heavy than the atmosphere.

Having proved that the part of the moon that shines consists of water, which mirrors the body of the sun and reflects the radiance it receives from it; and that, if these waters were devoid of waves, it would appear small, but of a radiance almost like the sun; —[5] It must now be shown whether the moon is a heavy or a light body: for, if it were a heavy body—admitting that at every grade of distance from the earth greater levity must prevail, so that water is lighter than the earth, and air than water, and fire than air and so on successively—it would seem that if the moon had density as it really has, it would have weight, and having weight, that it could not be sustained in the space

902. 1. On the margin are the words *tola romantina*, *tola* = *ferro stagnato* (tinned iron); *romantina* is some special kind of sheet-iron no longer known by that name.

Explanation
of the lumen
cinereum in
the moon.

spatio, ove essa si troua, non la potesse sostenere, e per conseguēza avesse a discendere ¹⁰inverso il centro dell' universo, e congiugnersi colla terra, e se nō lei, al māco le sue acque aues¹¹sino a cadere e spogliarla di se e cadere inverso il cētro e lasciar di se la luna spogliata e senza l¹²stro; òde, nō seguitando quel che di lei la ragione ci promette, egli è manifesto segno che tal luna è vestita de'sua ¹³elemēti, cioè acqua, aria e foco, e così in se, per se si sostenga in quello spatio come fa la nostra ter¹⁴ra coi sua elemēti in quest' altro spatio, e chē tale ofitio faccino le cose gravi ne' sua elemē¹⁵ti, qual fanno l'altre cose gravi nelli elemēti nostri.

¹⁶Quando l'ochio in oriēte vede la luna in occidentale vicinā al tramōtato sole, esso la vede ¹⁷colla sua parte onbrosa circundata da parte luminosa, del quale lume la parte laterale ¹⁸e superiore deriua dal sole, e la parte inferiore deriva dallo oceano occidentale, il qual ¹⁹ancora lui riceue li razzi solari e li riflette nelli inferiori mari della luna, e ancora per ²⁰tutta la parte òbrosa della luna dà tanto di splendore, qual'è quel che dà la luna alla terra nella mez²¹zanotte, e perciò nō resta integralmēte scura, e di qui à alcuno creduto, che la ²²luna abbia in parte lume da se oltre a quel che gli è dato dal sole, il quale lume diriua dalla āti²³detta causa delli nostri mari alluminati dal sole.

²⁴Ancora si potrebbe dire che'l cerchio dello splendore

where it is, and consequently that it would fall towards the centre of the universe and become united to the earth; or if not the moon itself, at least its waters would fall away and be lost from it, and descend towards the centre, leaving the moon without any and so devoid of lustre. But as this does not happen, as might in reason be expected, it is a manifest sign that the moon is surrounded by its own elements: that is to say water, air and fire; and thus is, of itself and by itself, suspended in that part of space, as our earth with its element is in this part of space; and that heavy bodies act in the midst of its elements just as other heavy bodies do in ours [15].

When the eye is in the East and sees the moon in the West near to the setting sun, it sees it with its shaded portion surrounded by luminous portions; and the lateral and upper portion of this light is derived from the sun, and the lower portion from the ocean in the West, which receives the solar rays and reflects them on the lower waters of the moon, and indeed affords the part of the moon that is in shadow as much radiance as the moon gives the earth at midnight. Therefore it is not totally dark, and hence some have believed that the moon must in parts have a light of its own besides that which is given it by the sun; and this light is due, as has been said, to the above-mentioned cause,—that our seas are illuminated by the sun.

Again, it might be said that the circle of radiance

15. This passage would certainly seem to establish Leonardo's claim to be regarded as the original discoverer of the cause of the ashy colour of the new moon (*lumen cinereum*). His observations

che fa la luna, quand'el'è col sole in ²⁵occidente, dirivasse dal sole integralmente, quando essa col sole e coll'occhio è situata nel ²⁶modo che qui disopra si dimostra.

²⁷Alcuni potrebbero dire che l'aria, elemēto della luna, pigliando il lume del sole, come fa la no²⁸stra spera dell'aria, fusse quella che finisce il cerchio luminoso al corpo della luna.

²⁹Alcuni àn creduto che la luna abbia alquanto di lume da se, la quale ope³⁰nione è falsa, perchè l'anno fondata sopra quel chiarore che si uede in mezzo ali ³¹corni quando la luna è nova, la quale alli confini dello splendore pare oscura, ³²e al confine della oscurità del campo pare si chiara, che molti credono essere ³³vn cerchio di nouo splendore, che finisca di circondare, doue le punte de' corni ³⁴aluminati dal sole terminano il loro splendore; e questa varietà di campo nasce ³⁵perchè quella parte d'esso campo, che termina colla parte luminosa della luna, per tal ³⁶paragone di splendore si dimostra piv oscura che non è, e quella parte di sopra, doue ³⁷pare vn pezzo di cerchio luminoso d'uniforme larghezza, nasce chè quivi la luna, essendo più chiara che ³⁸il mezzo over il campo, oue essa si troua; pel paragō di tale oscurità si dimostra in tale confine piv lu³⁹minosa che non è, la qual luminosità in tal tempo nasce dal nostro oceano colli altri mediterrani ⁴⁰che in quel tēpo è alluminato dal sole che già è tramōtato, in modo che il mare allora fa tale ofitio alla ⁴¹parte oscura della luna, qual fa la luna in quīta decima a noi,

shown by the moon when it and the sun are both in the West is wholly borrowed from the sun, when it, and the sun, and the eye are situated as is shown above.

Some might say that the air surrounding the moon as an element, catches the light of the sun as our atmosphere does, and that it is this which completes the luminous circle on the body of the moon.

Some have thought that the moon has a light of its own, but this opinion is false, because they have founded it on that dim light seen between the horns of the new moon, which looks dark where it is close to the bright part, while against the darkness of the background it looks so light that many have taken it to be a ring of new radiance completing the circle where the tips of the horns illuminated by the sun cease to shine [34]. And this difference of background arises from the fact that the portion of that background which is conterminous with the bright part of the moon, by comparison with that brightness looks darker than it is; while at the upper part, where a portion of the luminous circle is to be seen of uniform width, the result is that the moon, being brighter there than the medium or background on which it is seen by comparison with that darkness it looks more luminous at that edge than it is. And that brightness at such a time itself is derived from our ocean and other inland-seas. These are, at that time, illuminated by the sun which is already setting in such a way as that the sea then fulfils the same function to the dark side of the moon as the moon at its fifteenth day does to us when the

however, having hitherto remained unknown to astronomers, Moestlin and Kepler have been credited with the discoveries which they made independently a century later.

Some disconnected notes treat of the same subject in MS. C. A. 239^b; 718^b and 719^b: "*Perchè la luna cinta della parte alluminata dal sole in ponente, tra maggior splendore in mezzo a tal cerchio, che quando essa edissava il sole. Questo accade perchè nell' eclissare il sole ella ombrava il nostro oceano, il qual caso non accade essendo in ponente, quando il sole alluma esso oceano.*" The editors of the "*Saggio*" who first published this passage (page 12) add another short

one about the seasons in the moon which I confess not to have seen in the original manuscript: "*La luna ha ogni mese un verno e una state, e ha maggiori freddi e maggiori caldi, e i suoi equinozii son più freddi de' nostri.*"

23. 24. The larger of the two diagrams reproduced above stands between these two lines, and the smaller one is sketched in the margin. At the spot marked *A* Leonardo wrote *corpo solare* (solar body) in the larger diagram and *Sole* (sun) in the smaller one. At *C* *luna* (moon) is written and at *B* *terra* (the earth).

34. See Pl. CVIII, No. 5.

quando il sol'è tramōtato, e tal propor-
 12tione è da quel poco lume che à la parte

sun is set. And the small amount of light
 which the dark side of the moon receives
 bears the same proportion to the light of
 that side which is illuminated, as that . . . [42].

If you want to see how much brighter
 the shaded portion of the moon is than the
 background on which it is seen, conceal the
 luminous portion of the moon with your
 hand or with some other more distant ob-
 ject.

F. 84a]

903.

MACULE DELLA LUNA.

2 Alcuni dissero leuarsi da essa vapori
 a modo di 3 nugoli e interporrsi infra la
 luna e li occhi no 4 stri; il che, se così fusse,
 mai tali macule sare 5 bbero stabili nè di
 siti nè di figura, e vedendo la 6 luna in
 diuersi aspetti, ancor che tal macule 7 nō
 fossero variate, esse muterebbero figura
 come 8 fa quella cosa che si vede per più
 versi.

THE SPOTS ON THE MOON.

Some have said that vapours rise from
 the moon, after the manner of clouds and
 are interposed between the moon and our
 eyes. But, if this were the case, these spots
 would never be permanent, either as to
 position or form; and, seeing the moon
 from various aspects, even if these spots did
 not move they would change in form, as ob-
 jects do which are seen from different sides.

On the spots
 in the moon
 (903-907).

F. 84b]

904.

DELLE MACHIE DELLA LUNA.

2 Altri dissero che la luna era composta
 di parti più 3 o mē trasparenti, come se
 una parte fusse a modo 4 d'alabastro, e
 alcuna altra a modo di cristallo o vetro,
 5 che ne seguirebbe che 'l sole, ferēdo colli
 sua razzi 6 nella parte mē trasparēte, il
 lume rimarrebbe in 7 superfitie, e così la
 parte più densa resterebbe allu 8 minata, e
 la parte trasparēte mostrerebbe le 9 onbre
 delle profondità sue oscure, e così si cōpo-
 10 ne la qualità della luna; e questa opini-
 one è 11 piaciuta a molti filosofi, e massime
 a Aristotele, e 12 pure ella è falsa opinione,
 perchè ne' di 13 versi aspetti, che si trovano
 spesso la luna e il so 14 le alli nostri occhi,
 noi vedremmo variare tal ma 15 cule, e quando

OF THE SPOTS ON THE MOON.

Others say that the moon is composed
 of more or less transparent parts; as though
 one part were something like alabaster and
 others like crystal or glass. It would
 follow from this that the sun casting its rays
 on the less transparent portions, the light
 would remain on the surface, and so the
 denser part would be illuminated, and the
 transparent portions would display the shadow
 of their darker depths; and this is their
 account of the structure and nature of the
 moon. And this opinion has found favour
 with many philosophers, and particularly with
 Aristotle, and yet it is a false view—for, in
 the various phases and frequent changes of
 the moon and sun to our eyes, we should
 see these spots vary, at one time looking
 dark and at another light: they would be
 dark when the sun is in the West and the

si farebbono oscure, e quādo chi⁶are; scure si farebbono, quādo il sole è in oc¹⁷cidēte e la luna nel mezzo del celo, chè allora le ¹⁸cōcauità transparēti piglierebbono l'onbre in¹⁹sino alle sommità de' labbri di tal cōcauità trās²⁰parēti, perchè il sole nō potrebbe penetrare li ²¹sua razzi dentro alle boche di tali cōcauità, ²²le quali parrebbero chiare nel plenilunio, ²³doue la luna in oriēte guarda il sole all'occidē²⁴te; allora il sole alluminerebbe insino ne' fō²⁵di di tali transparētie, e così, nō generādosì ²⁶onbre, la luna non ci mostrerebbe in tal tempo ²⁷le predette machie, e così ora piv ora meno, ²⁸secondo le mutatiō del sol dalla luna e della lu²⁹na dai lochi nostri, come di sopra dissi.

moon in the middle of the sky; for then the transparent hollows would be in shadow as far as the tops of the edges of those transparent hollows, because the sun could not then fling his rays into the mouth of the hollows; which however, at full moon, would be seen in bright light, at which time the moon is in the East and faces the sun in the West; then the sun would illuminate even the lowest depths of these transparent places and thus, as there would be no shadows cast, the moon at these times would not show us the spots in question; and so it would be, now more and now less, according to the changes in the position of the sun to the moon, and of the moon to our eyes, as I have said above.

F. 85a]

905.

DELLE MACULE DELLA LUNA.

OF THE SPOTS ON THE MOON.

²Si è detto che le macule della luna son create in essa luna, ³da essere in se di uaria rarità e dēsità, il che se così fusse, ⁴nell'eclissi della luna i razzi solari penetrerbono per ⁵alcuna parte della predetta rarità, e, nō si ueden⁶do tale effetto, detta opinione è falsa;

⁷Altri dicono che la superfite della luna, essendo tersa ⁸e pulita, che essa, a similitudine di specchio, riceue in ⁹se la similitudine della terra; Questa openione ¹⁰è falsa, conciosiachè la terra, scoperta dall'acqua, per diuer¹¹si aspetti à diuerse figure; adunque, quando la luna ¹²è all'oriēte, essa specchierebbe altre machie, che quā¹³do essa ci è di sopra, o quādo essa è in occidēte; però ¹⁴le machie della luna, come si uede nel plenilunio, ¹⁵mai si uariano nel moto da lei fatto nel nostro emi¹⁶sperio; ²^a ragione è, che la cosa specchia¹⁷ta nella convessità piglia piccola parte d' es¹⁸so specchio, com'è provato in prospettiuā; ³^a ragione ¹⁹li è, che nel plenilunio la luna vede solo il mezzo ²⁰della

It has been asserted, that the spots on the moon result from the moon being of varying thinness or density; but if this were so, when there is an eclipse of the moon the solar rays would pierce through the portions which were thin as is alleged [5]. But as we do not see this effect the opinion must be false.

Others say that the surface of the moon is smooth and polished and that, like a mirror, it reflects in itself the image of our earth. This view is also false, inasmuch as the land, where it is not covered with water, presents various aspects and forms. Hence when the moon is in the East it would reflect different spots from those it would show when it is above us or in the West; now the spots on the moon, as they are seen at full moon, never vary in the course of its motion over our hemisphere. A second reason is that an object reflected in a convex body takes up but a small portion of that body, as is proved in perspective [18]. The third reason is that when the moon is full, it only faces half the hemisphere of the

905. 3—5. *Eclissi*. This word, as it seems to me, here means eclipses of the sun; and the sense of the passage, as I understand it, is that by the foregoing hypothesis the moon, when it comes be-

tween the sun and the earth must appear as if pierced,—we may say like a sieve.

18. *come è provato*. This alludes to the accompanying diagram.

spera della terra alluminata, nella quale ²¹l'oceano colle altre acque risplendono, e la terra ²²fa macule in esso splendore, e così si uedrebbe ²³la metà della nostra terra cinta dallo splendo²⁴re del mare alluminato dal sole, e nella luna tal ²⁵similitudine sarebbe minima parte d'essa luna; ²⁶4^a è che la cosa splendida non si spechia nell'al²⁷tra splendida; adunque il mare, pigliando splendo²⁸re dal sole, siccome fa la luna, e' nō si potrebbe in lei spe²⁹chiare tal terra, che ancora specchiar non vi si vedesse ³⁰particularmēte il corpo del sole e di ciascuna stel³¹la a lei opposta.

illuminated earth, on which only the ocean and other waters reflect bright light, while the land makes spots on that brightness; thus half of our earth would be seen girt round with the brightness of the sea lighted up by the sun, and in the moon this reflection would be the smallest part of that moon. Fourthly, a radiant body cannot be reflected from another equally radiant; therefore the sea, since it borrows its brightness from the sun,—as the moon does—, could not cause the earth to be reflected in it, nor indeed could the body of the sun be seen reflected in it, nor indeed any star opposite to it.

Br. M. 19 a]

906.

Se terrai osseruate le particule delle machie della luna, ²tu troverai in quelle spesse uolte gran varietà, e di questo ³ò fatto pruova io medesimo disegñadole; E questo nasce da nuvo⁴li che si leuano dall'acque d'essa luna, li quali s'interpongono infra 'l sole e essa acqua, e colla loro onbra tolgo⁶no i razzi del sole a tale acqua, onde essa acqua viene a ri⁷manere oscura, per non potere spechiare il corpo solare.

If you keep the details of the spots of the moon under observation you will often find great variation in them, and this I myself have proved by drawing them. And this is caused by the clouds that rise from the waters in the moon, which come between the sun and those waters, and by their shadow deprive these waters of the sun's rays. Thus those waters remain dark, not being able to reflect the solar body.

Leic. 5 a]

907.

Come le mac²chie della luna ³son variate da ⁴quel che già fu⁵rō, per causa del ⁶corso delle sue ⁷acque.

How the spots on the moon must have varied from what they formerly were, by reason of the course of its waters.

VI.

THE STARS.

F. 58]

Veggonsi le stelle di notte e nō di di, per esser noi sotto ²la grossezza dell'aria, la quale è piena d'infinite particule d'umidità, le quali, ciascuna per se quādo è percossa ⁴dalli razzi del sole, rendono splendore, e così l'in⁵nummerabili splēdori occupano esse stelle, e se ⁶tale aria nō fusse, il celo senpre ci mostrerebbe ⁷le stelle nelle sua tenebre.

911.

The stars are visible by night and not by day, because we are beneath the dense atmosphere, which is full of innumerable particles of moisture, each of which independently, when the rays of the sun fall upon it, reflects a radiance, and so these numberless bright particles conceal the stars; and if it were not for this atmosphere the sky would always display the stars against its darkness.

On the light of the stars (911—913).

F. 57 a]

SE LE STELLE ÀNNO LUME DAL SOLE O DA SE.

²Dicono di auere il lume da se, allegando ³che se Venere e Mercurio non avessino ⁴il lume da se, quādo essa s'interpone infra ⁵l'ochio nostro e 'l sole, esse oscurerebbero tan⁶to d'esso sole, quāto esse ne coprono al ochio ⁷nostro; E quest'è falso, perch'è prouato ⁸come l'onbroso, posto nel luminoso, è cinto e coper⁹to tutto da razzi laterali del rimanēte di tal lu¹⁰minoso, e così resta inuisibile, come si

912.

WHETHER THE STARS HAVE THEIR LIGHT FROM THE SUN OR IN THEMSELVES.

Some say that they shine of themselves, alledging that if Venus and Mercury had not a light of their own, when they come between our eye and the sun they would darken so much of the sun as they could cover from our eye. But this is false, for it is proved that a dark object against a luminous body is enveloped and entirely concealed by the lateral rays of the rest of that luminous body and so remains invisible. As may be seen

911. 1. vegāsi lesselle. 2. grosseza. 3. ciasscuna . . rende. 4. cossi. 5. ochupano . . esse. 6. fussi . . mosterrebbe. 7. lesstelle.
912. 1. ā lume. 2. dicano di havere . . dasse. 3. uenere e mercurio nōn auessi. 4. illumasse . . infral. 5. oscurerebō.
6. coprano. 9. razi. 12. ilūga. 13. ochupano. 15. acadē. 16. esieno . . non o. 18. nostro. Lines 19 and 20 are written

911. See Vol. I, No. 296, which also refers to starlight.

912. From this and other remarks (see No. 902, VOL. II.

l. 34 &c.) it is clear that Leonardo was familiar with the phenomena of Irradiation.

di¹¹mostra: quando il sole è veduto per la ra¹²mificazione delle piäte senza foglie in lüga di¹³stantia, essi rami non occupano parte al¹⁴cuna d'esso sole alli ochi nostri; JI simile ¹⁵accade a' predetti pianeti, li quali ancora ¹⁶che da se sieno senza luce, eglino non oc¹⁷cupano, com'è detto, parte alcuna del sole ¹⁸all'ochio nostro.

when the sun is seen through the boughs of trees bare of their leaves, at some distance the branches do not conceal any portion of the sun from our eye. The same thing happens with the above mentioned planets which, though they have no light of their own, do not—as has been said—conceal any part of the sun from our eye[18].

SECONDA ²⁰PROVA.

²¹Dicono le stelle nella notte parere lucidissime ²²quäto più ci sō superiori, e che, se esse nō auessino lume ²³da se, che l'ombra che fa la terra, che s'interpone ²⁴fra loro e 'l sole, verrebbe a scurarle, non vedē²⁵do esse, nè sēdo vedute dal corpo solare; Ma ²⁶questi non ànno considerato, che l'onbra piramidale de²⁷lla terra non aggiugne infra troppe stelle, e in ²⁸quelle ch'ella aggiugne, la piramide è tanto dimi²⁹nuita, che poco occupa del corpo della stella; e 'l ri³⁰manēte è alluminato dal sole.

SECOND ARGUMENT.

Some say that the stars appear most brilliant at night in proportion as they are higher up; and that if they had no light of their own, the shadow of the earth which comes between them and the sun, would darken them, since they would not face nor be faced by the solar body. But those persons have not considered that the conical shadow of the earth cannot reach many of the stars; and even as to those it does reach, the cone is so much diminished that it covers very little of the star's mass, and all the rest is illuminated by the sun.

F. 60a]

913.

Perchè li pianeti appariscono maggiori ²in oriēte che sopra di noi, che dovrebbe ³essere il contrario, essendo ⁴3500 miglia pù vicini a noi, essendo ⁵nel mezzo del celo, che essendo all'⁶rizzōte.

⁷Tutti li gradi delli elemēti, donde passa⁸no le spetie de' corpi celesti, ⁹che vengono all'ochio, sono ¹⁰eguali, e li angoli, ¹¹donde li penetra ¹²la linia cētrale di tali spetie, sono ¹³inequali, e la di¹⁴stantia è ¹⁵maggiore, come mostra l'eccesso *a b* so¹⁵pra *a d*, e per la ⁹a del ⁷o la grandezza ¹⁶d'essi corpi celesti nell'orizzonte è provata.

Why the planets appear larger in the East than they do overhead, whereas the contrary should be the case, as they are 3500 miles nearer to us when in mid sky than when on the horizon.

All the degrees of the elements, through which the images of the celestial bodies pass to reach the eye, are equal curves and the angles by which the central line of those images passes through them, are unequal angles [13]; and the distance is greater, as is shown by the excess of *a b* beyond *a d*; and the enlargement of these celestial bodies on the horizon is shown by the ⁹th of the ⁷th.

Tullius de Diuinatione ²ait Astrologiam fuisse ³adinuentā ante trojanum ⁴bellū Quingentis septua⁵ginta milibus añorum.
57000.

Cicero says in [his book] De Diuinatione On history of astrology. that Astrology has been practised five hundred seventy thousand years before the Trojan war.

57000.

Br. M. 173 δ (190δ)]

916.

Benchè il tempo sia annumerato infra le continue ²quātità, esso, per essere inuisibile e senza corpo, non cade integralmēte sotto la ³geometrica potentia, la quale lo diuide per figure e corpi d'infinita varietà, ⁴come continuo nelle cose uisibili e corporee far si uede; Ma sol co' sua primi ⁵principi si cōuiene, cioè col punto e colla linia; jl punto nel tempo è da ⁶essere equiparato al suo instante, e la linia à similitudine colla lūghez⁷za d'una quantità d'un tempo, e siccome i pūti sō principio e fine della predet⁸ta linia, così li instanti

Although time is included in the class of Of time and its divisions (916—918). Continuous Quantities, being indivisible and immaterial, it does not come entirely under the head of Geometry, which represents its divisions by means of figures and bodies of infinite variety, such as are seen to be continuous in their visible and material properties. But only with its first principles does it agree, that is with the Point and the Line; the point may be compared to an instant of time, and the line may be likened to the length of a certain quantity of time, and just as a line begins and terminates in a point, so such a space of time.

914. 4. refresso. 5. complexs. 8. duna.

916. 1. anumerato infralle 3. geometrica | "potentia" . . diuide . . corpi difinita. 4. uisibile . . farsi e uede Massol. 5. coe . . cholla. 6. Ella . . "a" . . cholla lūggez. 7. "duna quantita" dun . . essicome . . effine. 8. instanti . . pncipio . . Esse.

914. 4. *basa*. This probably alludes to some instrument, perhaps the Camera obscura.

915. The statement that CICERO, *De Divin.* ascribes the discovery of astrology to a period 57000 years before the Trojan war I believe to be quite erroneous. According to ERNESTI, *Clavis Ciceroniana*, CH. G. SCHULZ (*Lexic. Cicer.*) and the edition of *De Divin.* by GIESE the word Astrologia occurs only twice in CICERO: *De Divin. II, 42. Ad Chaldaeorum monstra veniamus, de quibus Eudoxus, Platonis auditor, in astrologia iudicio doctissimorum hominum facile princeps, sic opinatur (id quod scriptum reliquit): Chaldaeis in praedictione et in notatione cuiusque vite*

ex natali die minime esse credendum." He then quotes the condemnatory verdict of other philosophers as to the teaching of the Chaldaeans but says nothing as to the antiquity and origin of astronomy. CICERO further notes *De oratore I, 16* that Aratus was "*ignarus astrologiae*" but that is all. So far as I know the word occurs nowhere else in CICERO; and the word *Astronomia* he does not seem to have used at all. (H. MÜLLER-STRÜBING.)

916. This passage is repeated word for word on page 190^b of the same manuscript and this is accounted for by the text in Vol. I, No. 4. Compare also No. 1216.

sō termine e principio di qualūche dato spatio di tempo;—e se ⁹la linia è diuisibile in infinito, lo spatio d'ū tempo di tal diuisione non è alieno, ¹⁰e se le parti diuise della linia sono proportionabili infra se, ancora le parti del tempo ¹¹saraño proportionabili infra loro.

begins and terminates in an instant. And whereas a line is infinitely divisible, the divisibility of a space of time is of the same nature; and as the divisions of the line may bear a certain proportion to each other, so may the divisions of time.

XVI.

Physical Geography.

Leonardo's researches as to the structure of the earth and sea were made at a time, when the extended voyages of the Spaniards and Portuguese had also excited a special interest in geographical questions in Italy, and particularly in Tuscany. Still, it need scarcely surprise us to find that in deeper questions, as to the structure of the globe, the primitive state of the earth's surface, and the like, he was far in advance of his time.

The number of passages which treat of such matters is relatively considerable; like almost all Leonardo's scientific notes they deal partly with theoretical and partly with practical questions. Some of his theoretical views of the motion of water were collected in a copied manuscript volume by an early transcriber, but without any acknowledgment of the source whence they were derived. This copy is now in the Library of the Barberini palace at Rome and was published under the title: "De moto e misura dell'acqua," by FRANCESCO CARDINALI, Bologna 1828. In this work the texts are arranged under the following titles: Libr. I. Della sfera dell'acqua; Libr. II. Del moto dell'acqua; Libr. III. Dell'onda dell'acqua; Libr. IV. Dei retrosi d'acqua; Libr. V. Dell'acqua cadente; Libr. VI. Delle rotture fatte dall'acqua; Libr. VII. Delle cose portate dall'acqua; Libr. VIII. Dell'oncia dell'acqua e delle canne; Libr. IX. De molini e d'altri ordigni d'acqua.

*The large number of isolated observations scattered through the manuscripts, accounts for our so frequently finding notes of new schemes for the arrangement of those relating to water and its motions, particularly in the Codex Atlanticus: I have printed several of these plans as an introduction to the Physical Geography, and I have actually arranged the texts in accordance with the clue afforded by one of them which is undoubtedly one of the latest notes referring to the subject (No. 920). The text given as No. 930 which is also taken from a late note-book of Leonardo's, served as a basis for the arrangement of the first of the seven books—or sections—, bearing the title: *Of the Nature of Water* (Dell'acque in se).*

As I have not made it any part of this undertaking to print the passages which refer to purely physical principles, it has also been necessary to exclude those practical researches which, in accordance with indications given in 920, ought to come in as Books 13, 14 and 15. I can only incidentally mention here that Leonardo—as it seems to me, especially in his youth—devoted a great deal of attention to the construction of mills. This is proved by a number of drawings of very careful and minute execution, which are to be found in the *Codex Atlanticus*. Nor was it possible to include his considerations on the regulation of rivers, the making of canals and so forth (No. 920, Books 10, 11 and 12); but those passages in which the structure of a canal is directly connected with notices of particular places will be found duly inserted under section XVII (Topographical notes). In Vol. I, No. 5 the text refers to canal-making in general.

On one point only can the collection of passages included under the general heading of Physical Geography claim to be complete. When comparing and sorting the materials for this work I took particular care not to exclude or omit any text in which a geographical name was mentioned even incidentally, since in all such researches the chief interest, as it appeared to me, attached to the question whether these acute observations on the various local characteristics of mountains, rivers or seas, had been made by Leonardo himself, and on the spot. It is self-evident that the few general and somewhat superficial observations on the Rhine and the Danube, on England and Flanders, must have been obtained from maps or from some informants, and in the case of Flanders Leonardo himself acknowledges this (see No. 1008). But that most of the other and more exact observations were made, on the spot, by Leonardo himself, may be safely assumed from their method and the style in which he writes of them; and we should bear it in mind that in all investigations, of whatever kind, experience is always spoken of as the only basis on which he relies. Incidentally, as in No. 984, he thinks it necessary to allude to the total absence of all recorded observations.

I.

INTRODUCTION.

Leic. 5a]

919.

Questi libri contēgono in ne' primi ² della natura dell'acqua in se ne' ³ sua moti, li altri contēgono delle ⁴ cose fatte dai sua corsi, ⁵ che mv⁶tano il mondo di centro e di figura.

These books contain in the beginning: Schemes for the arrangement of the materials (919-928).
Of the nature of water itself in its motions; the others treat of the effects of its currents, which change the world in its centre and its shape.

Leic. 15b]

920.

DIVISIÒ DEL LIBRO.

Libro p^o dell'acque in se,
libro 2^o del mare,
libro 3^o delle uene,
⁵libro 4^o de' fiumi;
libro 5^o delle nature de' fōdi,
libro 6 delli obbietti,
libro 7 delle ghiaje,
⁸libro 8^o della superfittie del'acqua,
¹⁰libro 9 delle cose che in quella
son messe;
libro 10^o de' ripari de' fiumi,
libro 11^o delli condotti,
libro 12 de' canali,
libro 13 delli strumēti volti dall'acqua,
¹⁵libro 14 del far mōtare l'acque,
libro 15 delle cose cōsumate dall'acque.

DIVISIONS OF THE BOOK.

Book 1 of water in itself.
Book 2 of the sea.
Book 3 of subterranean rivers.
Book 4 of rivers.
Book 5 of the nature of the abyss.
Book 6 of the obstacles.
Book 7 of gravels.
Book 8 of the surface of water.
Book 9 of the things placed
therein.
Book 10 of the repairing of rivers.
Book 11 of conduits.
Book 12 of canals.
Book 13 of machines turned by water.
Book 14 of raising water.
Book 15 of matters worn away by water.

manentia,

⁶Libro del fare che li fiumi con lor corso
tēgin netti li fondi loro per le città dōde
passano,

⁷Libro del fare o rifondare li ponti sopra
li fiumi,

⁸Libro di ripari che farsi debbō alli
muri e argini de' fiumi percossi dall'ac-
qua,

⁹Libro del generare li colli dall'arena
o ghiaja sopra le gran profondità dell'acque.

A book of the ordering of rivers so as to
preserve their banks.

A book of the mountains, which would
stand forth and become land, if our hemi-
sphere were to be uncovered by the water.

A book of the earth carried down by the
waters to fill up the great abyss of the seas.

A book of the ways in which a tempest may
of itself clear out filled up sea-ports.

A book of the shores of rivers and of
their permanency.

A book of how to deal with rivers, so
that they may keep their bottom scoured by
their own flow near the cities they pass.

A book of how to make or to repair
the foundations for bridges over the rivers.

A book of the repairs which ought to
be made in walls and banks of rivers where
the water strikes them.

A book of the formation of hills of sand
or gravel at great depths in water.

COMÍCIAMÉTO DEL TRATTATO DEL'ACQUA.

THE BEGINNING OF THE TREATISE ON WATER.

²L'omo è detto · da li antiqui · mōdo minore ·, e cierto la ditione · d'esso · nome è bene collocata, ³impero · chè, siccome · l'omo · è cōposto · di terra ·, acqua ·, aria · e foco ·, questo corpo · della · terra ⁴è il simiglante ·; se l'omo · à in se · ossi, sostenitori e armadura · della carne ·, ⁵l mōdo à i sassi, ⁶sostenitori della · terra; se l'omo à in se il lago · del sangue, doue cresce · e discescye il polmo⁶ne · nello · alitare ·, ⁷l corpo della terra à il suo oceano mare ·, il quale ancora · lui cresce ⁷e discescye ogni · sei · ore · per lo alitare · del mōdo ·; se dal detto · lago di sangue · diriuano ve⁸ne ·, che si vanno ramificādo · per lo corpo · vmano ·, similmēte il mare oceano enpie ⁹il corpo della terra · d'infinite vene d'acqua; mancano al corpo della terra · i nerui, i quali nō ui ¹⁰sono ·, perchè i nervi sono fatti al proposito · del movimēto ·, e il mōdo sendo di perpetua stabilità, ¹¹non accade movimēto e, nō accadēdo movimēto, · i nervi · nō ui sono · neciessari; Ma ī tutte ¹²l'altre · cose · sono · molto simili.

By the ancients man has been called the world in miniature; and certainly this name is well bestowed, because, inasmuch as man is composed of earth, water, air and fire, his body resembles that of the earth; and as man has in him bones the supports and framework of his flesh, the world has its rocks the supports of the earth; as man has in him a pool of blood in which the lungs rise and fall in breathing, so the body of the earth has its ocean tide which likewise rises and falls every six hours, as if the world breathed; as in that pool of blood veins have their origin, which ramify all over the human body, so likewise the ocean sea fills the body of the earth with infinite springs of water. The body of the earth lacks sinews and this is, because the sinews are made expressly for movements and, the world being perpetually stable, no movement takes place, and no movement taking place, muscles are not necessary.—But in all other points they are much alike.

930.

ORDINE DEL PRIMO LIBRO DELLE ACQUE.

THE ORDER OF THE FIRST BOOK ON WATER.

The arrange-
ment of
Book I.

²Difinisci prima che cosa è altezza e bassezza anzi come sō situati ³li elemēti l'ū'dentro all'altro; Di poi che cosa è gravità dē⁴sa e che è gravità liquida, ma prima che cosa è in se gravi⁵ta e leuità .; Di poi descrivi perchè l'acqua si move e perchè ter⁶mina il moto suo, poi perchè si fa più tarda o veloce, oltre ⁷a questo come ella senpre disciēde, essendo in cōfine d'ari⁸a più bassa di lei | E come l'acqua si leua in aria mediante ⁹il calore del sole e poi ricade in pioggia .; ancora perchè l'acqua ¹⁰surgie dalle cime de' monti e se l'acqua di nessuna vena più alta ¹¹che l'oceano mare può uersare acqua più alta che la superfite ¹²d'esso oceano .; E come tutta l'acqua che torna all'oceano è più alta ¹³della spera, dell'acqua | e come l'acqua delli mari equinotiali è più alta ¹⁴che le acque settētrionali, ed è più alta sotto il corpo del sole ¹⁵che in nessuna parte del circolo equinotiale | come si speri¹⁶mēta sotto il calore dello stizzo infocato, l'acqua che mediā¹⁷te tale stizzo bolle e l'acqua circustāte al ciētro di tal bol¹⁸lore senpre

Define first what is meant by height and depth; also how the elements are situated one inside another. Then, what is meant by solid weight and by liquid weight; but first what weight and lightness are in themselves. Then describe why water moves, and why its motion ceases; then why it becomes slower or more rapid; besides this, how it always falls, being in contact with the air but lower than the air. And how water rises in the air by means of the heat of the sun, and then falls again in rain; again, why water springs forth from the tops of mountains; and if the water of any spring higher than the ocean can pour forth water higher than the surface of that ocean. And how all the water that returns to the ocean is higher than the sphere of waters. And how the waters of the equatorial seas are higher than the waters of the North, and higher beneath the body of the sun than in any part of the equatorial circle; for experiment shows that under the heat of a burning brand the water near the brand boils, and the water surrounding this ebullition always sinks with

932.

PRINCIPIO DEL LIBRO DELL'ACQUE.

THE BEGINNING OF THE BOOK ON WATER.

²Pelago è detto quello, il quale à figura
 lãrga ³e profōda; ⁴nel quale l'acque stanno
 con poco moto.

Sea is the name given to that water
 which is wide and deep, in which the waters
 have not much motion.

Leic. 34 b]

933.

Li centri della sphericità dell'acqua sono
 due: l'uno è della vniuersale acqua, l'altro
 è particolare; ²l'vniuersale è quello, il
 quale serue a tutte l'acque senza moto, che
 sono in se in grã quãtità, ³come canali,
 fossi, viuai, fonti, pozzi, fiumi morti, laghi,
 paduli, stagni e mari, li quali, ancorachè
 sieno di uarie altezze ciascuno per se, ãno
 li termini delle lor superfite equi⁴distanti
 al centro del mondo, come sono i laghi
 posti nelle cime delli alti mōti come sopra
⁵Pietra Pana e Lago della Sibilla a Norcia,
 e tutti li laghi che dā principio a grandi
 fiumi, come Tesino ⁶dal Lago Maggiore,
 Adda dal lago di Como, Mincio dal lago
 di Garda e Reno dal lago di Costan⁷tia
 e di Coira e dal lago di Lucerne, e come
 Tigrion, il quale passa per la Minore Asia,
 il quale ne porta ⁸con seco l'acqua di 3
 paduli, l'un dopo l'altro, di uarie altezze,
 de' quali il piv alto è Munace, el mezzano
 è Pallas ⁹e l'più basso è Triton; ancora
 el Nilo diriuu da 3 altissimi paduli in Eti-
 opia.

The centres of the sphere of water are
 two, one universal and common to all water,
 the other particular. The universal one is
 that which is common to all waters not in
 motion, which exist in great quantities. As
 canals, ditches, ponds, fountains, wells, dead
 rivers, lakes, stagnant pools and seas, which,
 although they are at various levels, have
 each in itself the limits of their superficies
 equally distant from the centre of the earth,
 such as lakes placed at the tops of high moun-
 tains; as the lake near Pietra Pana and
 the lake of the Sybil near Norcia; and all
 the lakes that give rise to great rivers, as
 the Ticino from Lago Maggiore, the Adda
 from the lake of Como, the Mincio from
 the lake of Garda, the Rhine from the lakes
 of Constance and of Chur, and from the lake of
 Lucerne, like the Tigris which passes through
 Asia Minor carrying with it the waters of three
 lakes, one above the other at different heights
 of which the highest is Munace, the middle one
 Pallas, and the lowest Triton; the Nile again
 flows from three very high lakes in Ethiopia.

19. chelli . . ettãto. 20. chessi chonvertano in diaccio.

 have no direct bearing on the subject.

933. 5. *Pietra Pana*, a mountain near Florence. If
 for Norcia, we may read Norchia, the remains of

the Etruscan city near Viterbo, there can be no doubt
 that by '*Lago della Sibilla*'—a name not known else-
 where, so far as I can learn—Leonardo meant
Lago di Vico (Lacus Ciminus, Aen. 7).

A. 584]

934.

DEL CIËTRO DELL OCIEANO · MARE.

²Il ciëtro della spera · dell'acqua · è il centro · vero · della rotòdita del nostro mòdo, · il quale si còpone ³infra · acqua e terra · in forma · rotòda ·; Ma se tu · volessi trovare · il ciëtro dello · elemëto della ⁴terra ·, questo · è còtenuto · per equidistâte · spatio · dalla superfite · dell'oceano · mare ·, e nò dalla ⁵equidistante · superfite · della · terra ·, perchè chiaro · si comprende · questa palla · della · terra non ⁶avere · niente · di perfetta · rotòdità ·, se non è · in quella · parte dou'è mare · o paduli o altre acque mor'te, · e qualunque · parte · d'essa · terra che escie · fori · d'esso mare, s'allontana · dal suo · ciëtro.

OF THE CENTRE OF THE OCEAN.

The centre of the sphere of waters is the true centre of the globe of our world, which is composed of water and earth, having the shape of a sphere. But, if you want to find the centre of the element of the earth, this is placed at a point equidistant from the surface of the ocean, and not equidistant from the surface of the earth; for it is evident that this globe of earth has nowhere any perfect rotundity, excepting in places where the sea is, or marshes or other still waters. And every part of the earth that rises above the water is farther from the centre.

E. 48]

935.

DEL MARE CHE MUTA ²IL PESO DELLA TERRA.

³Li nichì, ostrighe e altri simili animali, ⁴che nascono nelli fanghi marini, ci testifi-⁵cano la mutatiò della terra intorno al ⁶ciëtro de' nostri elemëti; pruovasi così: ⁷Li fiumi reali senpre corrono con torbidu-⁸me, tinto dalla terra, che per lor si leua mediâte la cò⁹fregatiò delle sue acque sopra il fondo e nelle sue ¹⁰riue, e tal còsumati-¹¹one scopre le fronti · de' gradi ¹²fatti a' suoli di quelli nichì, che stan nella superfite ¹³del fango marino, li quali in tal sito nascieronò, quã¹⁴do l'acque salse li coprivano, e questi tali gradi erano ri¹⁵coperti di tempo in tempo dalli fanghi di uarie grossez¹⁶ze o condotti al mare dalli fiumi cò diluvi di di-¹⁷verse grã¹⁸dezze; e così tali fãghi furono composti in tâta altezza, che dal fondo si ¹⁹scopriua all'aria; Ora questi tali fondi sono in tâta ²⁰altezza che son fatti colli, o alti mòti, e li fiumi, ²¹consuma²²tori de' lati ²³d'essi monti, ²⁴scoprono ²⁵li gradi d'es²⁶si nichì, e cò²⁷si il leni²⁸ficato lato ²⁹della terra ³⁰al còtinuo ³¹s'inalza, e ³²li antipo³³di s'accosta³⁴no più al ³⁵ciëtro del ³⁶mondo, ³⁷e li anti³⁸chi fondi del ³⁹mare son fatti ⁴⁰gioghi di monti.

OF THE SEA WHICH CHANGES THE WEIGHT OF THE EARTH.

The shells, oysters, and other similar animals, which originate in sea-mud, bear witness to the changes of the earth round the centre of our elements. This is proved thus: Great rivers always run turbid, being coloured by the earth, which is stirred by the friction of their waters at the bottom and on their shores; and this wearing disturbs the face of the strata made by the layers of shells, which lie on the surface of the marine mud, and which were produced there when the salt waters covered them; and these strata were covered over again from time to time, with mud of various thickness, or carried down to the sea by the rivers and floods of more or less extent; and thus these layers of mud became raised to such a height, that they came up from the bottom to the air. At the present time these bottoms are so high that they form hills or high mountains, and the rivers, which wear away the sides of these mountains, uncover the strata of these shells, and thus the softened side of the earth continually rises and the antipodes sink closer to the centre of the earth, and the ancient bottoms of the seas have become mountain ridges.

936.

Faccia mutatiō la terra colla sua gravezza, quāte farsi ²voglia, che mai la superfite della spera dell'acqua nō si partirà dalla sua equidistātia col centro del mōdo.

Let the earth make whatever changes it may in its weight, the surface of the sphere of waters can never vary in its equal distance from the centre of the world.

Leic. 358]

937.

SE LA TERRA È MÈ CHE L'ACQUA.

WHETHER THE EARTH IS LESS THAN THE WATER.

²Dicono alcuni esser vero, che la terra, ch'è scoperta dalle acque, sia molto minore che quella che da esse acqu'è coperta; ³Ma che considerando la grossezza di 7000 miglia di diametro, che à essa terra, e' si può concludere l'acqua essere di ⁴poca profondità.

Some assert that it is true that the earth, which is not covered by water is much less than that covered by water. But considering the size of 7000 miles in diameter which is that of this earth, we may conclude the water to be of small depth.

Of the proportion of the mass of water to that of the earth (937-938).

Leic. 36a]

938.

DELLA TERRA IN SE.

OF THE EARTH.

²L'alzarsi tanto le cime de' monti sopra la spera dell'acqua può esser diriuato, perchè il loco grandissimo ³della terra, il quale

The great elevations of the peaks of the mountains above the sphere of the water may have resulted from this that: a very

era ripieno d'acqua, cioè la grandissima cauerna, douette cadere ⁴assai della sua volta inuerso il centro del mondo, trovandosi ispichata mediante il corso de⁵lle uene che al continuo consumano il loco donde passano.

lo dimostra, onde bisogna che ¹⁰ molta acqua sia dentro alla terra, senza quella ch'è infusa nella bassa aria e che scorre ¹¹ per li fiumi e uene.

the sea does not show this; so that there must be a great deal of water inside the earth, besides that which rises into the lower air and which flows through rivers and springs.

F. 27a]

939.

FIGURA D'ELEMĒTI.

² Della figura delli elemēti, e prima ³ contro a chi nega ³ l'opinione di Platone, che dicono che se essi elemēti vestis⁴sero l'un l'altro, colle figure che mette Platone, che si ca⁵vserebbe vacuo infra l'uno e l'altro; e non è vero, e ⁶ qui lo provo, ma prima bisogna proporre alcuna cō⁷clusione; Non è neciessario che nessuno ele⁸mento, che veste l'ū l'altro, sia d'equ¹ grossezza in tu⁹ta la sua quantità infra la parte che ueste e quel¹⁰ la ch'è uestita; Noi uediamo la spera dell'acqua ma¹¹ nifestamēte essere di uarie grossezze dalla sua ¹² superfite al fondo, e che, nō che essa vestisse ¹³ la terra quando fusse di figura cuba cioè di 8 angoli come ¹⁴ vole Platone, essa veste la terra che à innumerabili ¹⁵ angoli di scogli coperti dall'acqua e varie globosità e cō¹⁶ cavità, e non si genera vacuo infra l'acqua e la terra; Ancora l'aria veste la spera dell'acqua ¹⁷ insieme colli monti e valli che superano essa spera, e nō ¹⁸ rimane vacuo infra la terra e l'aria, sicchè, chi disse ¹⁹ generarsi vacuo, ebbe tristo discorso.

²⁰ A Platō si rispōde che la superfite ²¹ delle figure che avrebbero li elemēti, ²² che lui pone, non potrebbero sta²³re.

THE FIGURES OF THE ELEMENTS.

Of the figures of the elements; and first as against those who deny the opinions of Plato, and who say that if the elements include one another in the forms attributed to them by Plato they would cause a vacuum one within the other. I say it is not true, and I here prove it, but first I desire to propound some conclusions. It is not necessary that the elements which include each other should be of corresponding magnitude in all the parts, of that which includes and of that which is included. We see that the sphere of the waters varies conspicuously in mass from the surface to the bottom, and that, far

from investing the earth when that was in the form of a cube that is of 8 angles as Plato will have it, that it invests the earth which has innumerable angles of rock covered by the water and various prominences and concavities, and yet no vacuum is generated between the earth and water; again, the air invests the sphere of waters together with the mountains and valleys, which rise above that sphere, and no vacuum remains between the earth and the air, so that any one who says a vacuum is generated, speaks foolishly.

But to Plato I would reply that the surface of the figures which according to him the elements would have, could not exist.

3000 miles and flow into the Mediterranean by the shores of Egypt; and if we will give to this a fall of ten braccia a mile, as is usually allowed to the course of rivers in general, we shall find that the Nile must have its mouth ten miles lower than its source. Again, we see the Rhine, the Rhone and the Danube starting from the German parts, almost the centre of Europe, and having a course one to the East, the other to the North, and the last to Southern seas. And if you consider all this you will see that the plains of Europe in their aggregate are much higher than the high peaks of the maritime mountains; think then how much their tops must be above the sea shores.

DEL CALDO CHE NEL MODO · È.

OF THE HEAT THAT IS IN THE WORLD.

²Dov'è · vita lì è calore ·, e dou'è · calore · vitale, quiui è mouimēto · d'umori; ³Questo · si pruova · inperochè si uede · per effetto · che · il caldo · dello elemēto · del foco · senpre · tira · a se ⁴li umidi · vapori · e folte nebbie e spessi · nuvoli ·, i quali · spiccano da' mari e altri · paduli · e fiumi e vmide ⁵valli, e quelle tirādo · a poco a poco · insino · alla · fredda · regione, quella prima parte si ferma, ⁶perchè · il caldo · e vmido nō si affā · col freddo · e secco; onde · ferma la prima parte lì assetta l'altre ⁷parti, e così, aggiugnēdosi parte cō parte ·, si fa · spesse · e oscure nvbole ·; e spesso sono ⁸remosse e portate da vēti d'una · in altra regione; dove per la densità loro fanno sì spessa gravezza, ⁹che cadono · cō spessa · pioggia ·; e se 'l caldo · del sole s'aggiugnie · alla potētia dello elemēto ¹⁰del foco ·, i nuvoli fieno tirati piv · alti e trovano · piv freddo, in nel quale si ghiacciano e cavvasi ¹¹tēpestosa · grādine ·; Ora · quel medesimo · caldo ·, che tiene · si grā peso · d'acqua ·, come si uede ¹²piovere de' nvvoli, sveglie l'acque di basso · in alto · dalle base delle mōtagnie, e cōduciele, e tienle ¹³dētro · alle · cime delle mōtagnie,—le quali, trovādo qualche fessura, al · continuo vsciēdo, ¹⁴causā i fiumi.

Where there is life there is heat, and where vital heat is, there is movement of vapour. This is proved, inasmuch as we see that the element of fire by its heat always draws to itself damp vapours and thick mists as opaque clouds, which it raises from seas as well as lakes and rivers and damp valleys; and these being drawn by degrees as far as the cold region, the first portion stops, because heat and moisture cannot exist with cold and dryness; and where the first portion stops the rest settle, and thus one portion after another being added, thick and dark clouds are formed. They are often wafted about and borne by the winds from one region to another, where by their density they become so heavy that they fall in thick rain; and if the heat of the sun is added to the power of the element of fire, the clouds are drawn up higher still and find a greater degree of cold, in which they form ice and fall in storms of hail. Now the same heat which holds up so great a weight of water as is seen to rain from the clouds, draws them from below upwards, from the foot of the mountains, and leads and holds them within the summits of the mountains, and these, finding some fissure, issue continuously and cause rivers.

DEL MARE CHE A MOLTI ² SENPLICI PAR PIÙ
ALTO ³ CHE LA TERRA CHE GLI FA LITI.

OF THE SEA, WHICH TO MANY FOOLS APPEARS
TO BE HIGHER THAN THE EARTH WHICH FORMS
ITS SHORE.

The relative
height of the
surface of
the sea to
that of the
land
(942-945).

⁴ *b d* è vna pianvra, donde corre ⁵ vn
fiume al mare, la qual pianvra à per ter-
mine esso mare; e per⁷chè in vero essa
terra scoperta nō ⁸ è nel sito dell' e-
qualità, — perchè, se co⁹si fusse, il fiume
non avrebbe mo¹⁰to—, onde, moven-
dosi, questo sito ¹¹ à piutosto da essere
detto spiagg¹²ia che pianvra; e così
essa pia¹³nura *d b* termina in tal
modo ¹⁴ colla spera dell' acqua che,
chi la produ¹⁵cesse in continua rettitudine
in *b a*, ¹⁶ essa entrerebbe sotto il mare, e
¹⁷ di qui nasce che 'l mar *a c b* pare più
alto che la terra scoperta.

¹⁸ Naturalmète nes¹⁹una parte della ²⁰ terra
discoperta da ²¹ l'acqua fia mai ²² più bassa
che la ²³ superfitie della ²⁴ spera d' essa acqua.

b d is a plain through which a river
flows to the sea; this plain ends at the sea,
and since in fact the dry land that is un-
covered is not perfectly level—for,
if it were, the river would have no
motion—as the river does move, this
place is a slope rather than a plain;
hence this plain *d b* so ends where
the sphere of water begins that if
it were extended in a continuous line
to *b a* it would go down beneath the sea,
whence it follows that the sea *a c b* looks
higher than the dry land.

Obviously no portions of dry land left
uncovered by water can ever be lower than
the surface of the watery sphere.

Certainly I wonder not a little at the
common opinion which is contrary to truth,
but held by the universal consent of the
judgment of men. And this is that all are
agreed that the surface of the sea is higher
than the highest peaks of the mountains;
and they allege many vain and childish reasons,
against which I will allege only one simple
and short reason: We see plainly that if
we could remove the shores of the sea, it
would invest the whole earth and make it
a perfect sphere. Now, consider how much
earth would be carried away to enable the
waves of the sea to cover the world; there-
fore that which would be carried away must
be higher than the sea-shore.

have flowed from the summits of the mountains of Armenia, it must be believed that all the water of the ocean has passed very many times through these mouths. And do you not believe that the Nile must have sent more water into the sea than at present exists of all the element of water? Undoubtedly, yes. And if all this water had fallen away from this body of the earth, this terrestrial machine would long since have been without water. Whence we may conclude that the water goes from the rivers to the sea, and from the sea to the rivers, thus constantly circulating and returning, and that all the sea and the rivers have passed through the mouth of the Nile an infinite number of times.

He renders this "*Le Tigre et l'Euphrate se sont dēversés par les sommets des montagnes [avec leurs eaux destructives?] on peut cro're*" &c. Leonardo always writes *Ermīni, Erminia*, for *Armeni, Armenia* (Arabic:

Irmīniyah). M. RAVAISSON also deviates from the original in his translation of the following passage: "*Or tu ne crois pas que le Nil ait mis plus d'eau dans la mer qu'il n'y en a à présent dans tout l'élément de l'eau. Il est certain que si cette eau était tombée*" &c.

II.

ON THE OCEAN.

G. 484]

946.

PERCHÈ L'ACQUA È SALSA.

WHY WATER IS SALT.

Refutation of Pliny's theory as to the saltiness of the sea (946. 947).

2Dicie Plinio nel 2° suo libro, al 103 ca³pitolo, che l'acqua del mare è salata perchè 4l'ardore del sole secca l'umi⁵do e quello succia, e questo al mare, che 6molto s'allarga, dà sapore di sale; 7Ma questo nō si cōciede, perchè se la salsedine 8del mare avesse cavsa dallo ardore del sole, 9e' non è dubbio che tanto maggiormente li laghi, stagnie paduli 10sarebbono più insalati, quāto 11le loro acque son manco mobili e di 12minore profondità, e la esperiēzia ci mo¹³stra il contrario; tali paduli ci mostrā 14le loro acque essere al tutto private di sal¹⁵sedine; Ancora s'assegna da Plinio nel medesimo¹⁶capitolo che tal salsedine

Pliny says in his second book, chapter 103, that the water of the sea is salt because the heat of the sun dries up the moisture and drinks it up; and this gives to the wide stretching sea the savour of salt. But this cannot be admitted, because if the saltness of the sea were caused by the heat of the sun, there can be no doubt that lakes, pools and marshes would be so much the more salt, as their waters have less motion and are of less depth; but experience shows us, on the contrary, that these lakes have their waters quite free from salt. Again it is stated by Pliny in the same chapter that this saltness might originate,

Sic mari late patentis saporem incoqui salis, aut quia exhausto inde dulci tenuique, quod facillime trahat vis ignea, omne asperius crassiusque linguatur: ideo summa aequorum aqua dulciorem profundam; hanc esse veriorem causam, quam quod mare terrae sudor sit aeternus: aut quia plurimum ex arido misceatur illi vapore: aut quia terrae natura sicut medicatus aquas inficiat . . (cp. CV): altis-

simum mare XV. stadiorum Fabianus tradit. Alii n Ponto coadverso Coraxorum gentis (vocat Βαθρα Ponti) trecentis fere a continenti stadiis immensam altitudinem maris tradunt, vadis nunquam repertis. (cp. CVI [CIII]) Mirabilius id faciunt aquae dulces, juxta mare, ut fistulis emicantes. Nam nec aquarum natura a miraculis cessat. Dulces mari invehuntur, leviores haud dubie. Ideo et marinae, quarum natura gravior, magis in- vecta sustinent. Quaedam vero et dulces inter se super- meant alias.

¹⁷potrebbe nasciere, perchè, leuatone ogni ¹⁸dolce e sottile ¹⁹parte, la qual facilmēte il caldo a se ti²⁰ra, rimane la parte più aspra e più ²¹grossa, e per questo l'acqua, che è nella su²²perfitie, è più dolce che nel fōdo; ²³a questa si cōtradice colle medesime ²⁴sopradette ragioni, cioè che il medesimo ac²⁵caderebbe alli paduli e altre acque che per il cal²⁶do s'asciugano; Acora fu detto che ²⁷la salsedine del mare è sudore della terra; ²⁸a questo si rispōde che tutte le uene dell'acque ²⁹che penetrano la terra, sarebbono insalate; Ma ³⁰si cōclude la salsedine del mare esser nata ³¹dalle molte vene d'acqua le quali nel ³⁴penetrare la ter³⁵ra trovano ³⁶le mini-³⁷ere del sale, e ³⁸quelle in parte ³⁹si sol-^{uono} e por⁴⁰tā seco all' o⁴¹cieano e li altri ⁴²mari, d'ō⁴³de mai ¶li nuvo⁴⁴li, seminatori ⁴⁵d'elli fiumi¶ ⁴⁶lo leuano; ed e' sarebbe ⁴⁷più salato il ma⁴⁸re alli nostri tē⁴⁹pi che mai per ⁵⁰alcun altro tē⁵¹po fusse, e se per ⁵²l'auersario si di⁵³cesse, che il tempo ⁵⁴infinito sechereb⁵⁵bē over cōgielereb⁵⁶be il mare in sa⁵⁷le, a questo ⁵⁸si risponde, che ⁵⁹tal sale si rē⁶⁰de alla terra ⁶¹colla liberatione ⁶²d'essa terra, che ⁶³s'inalza col suo ⁶⁴acquistato sale, ⁶⁵e li fiumi lo rendo-⁶⁶no alla sōmersa terra.

because all the sweet and subtle portions which the heat attracts easily being taken away, the more bitter and coarser part will remain, and thus the water on the surface is fresher than at the bottom[22]; but this is contradicted by the same reason given above, which is, that the same thing would happen in marshes and other waters, which are dried up by the heat. Again, it has been said that the saltness of the sea is the sweat of the earth; to this it may be answered that all the springs of water which penetrate through the earth, would then be salt. But the conclusion is, that the saltness of the sea must proceed from the many springs of water which, as they penetrate into the earth, find mines of salt and these they dissolve in part, and carry with them to the ocean and the other seas, whence the clouds, the begetters of rivers, never carry it up. And the sea would be saltier in our times than ever it was at any time; and if the adversary were to say that in infinite time the sea would dry up or congeal into salt, to this I answer that this salt is restored to the earth by the setting free of that part of the earth which rises out of the sea with the salt it has acquired, and the rivers return it to the earth under the sea.

G. 49a]

947.

Terza e vlti²ma ragione di³remo, il sale ⁴essere in tutte ⁵le cose create ⁶e questo c' ⁷segniano ⁸le acque passa⁹te per tutte le ci¹⁰eneri e calci¹¹ni delle cose ¹²bruciate, e le ¹³orine di qua¹⁴lūche anima¹⁵le e le super¹⁶fluità usci¹⁷te de' lor cor¹⁸pi e le terre, ¹⁹nelle quali si ²⁰cōuertono ²¹le cor-^{ruptioni} ²²di tutte le cose.

²³Ma a dire meglio, essendo dato il mōdo eterno, egli è neciessario ²⁴che li sua popoli sieno ācora loro eterni; ²⁵ōde ²⁶eternalmēte fu e sarebbe la spetie vmana cōsu²⁶matricie del sale; e se tutta la massa

For the third and last reason we will say that salt is in all created things; and this we learn from water passed over the ashes and cinders of burnt things; and the urine of every animal, and the superfluities issuing from their bodies, and the earth into which all things are converted by corruption.

But,—to put it better,—given that the world is everlasting, it must be admitted that its population will also be eternal; hence the human species has eternally been and would be consumers of salt; and if all the mass of the earth were to be turned into salt, it

would not suffice for all human food [27]; whence we are forced to admit, either that the species of salt must be everlasting like the world, or that it dies and is born again like the men who devour it. But as experience teaches us that it does not die, as is evident by fire, which does not consume it, and by water which becomes salt in proportion to the quantity dissolved in it,—and when it is evaporated the salt always remains in the original quantity—it must pass through the bodies of men either in the urine or the sweat or other excretions where it is found again; and as much salt is thus got rid of as is carried every year into towns; therefore salt is dug in places where there is urine.—Sea hogs and sea winds are salt.

We will say that the rains which penetrate the earth are what is under the foundations of cities with their inhabitants, and are what restore through the internal passages of the earth the saltness taken from the sea; and that the change in the place of the sea, which has been over all the mountains, caused it to be left it there in the mines found in those mountains,&c.

COME L'OCEANO NŌ PE²NETRA INFRA LA TERRA.

THAT THE OCEAN DOES NOT PENETRATE UNDER THE EARTH.

³L'oceano nō penetra infra la terra, e que⁴sto c'insegniano le molte e varie vene d'acque dolci, le quali in diuersi lochi d'esso oceano pene⁶trano dal fondo alla sua superfite; Ancora il me⁷desimo dimostrano li pozzi fatti dopo lo spa⁸tio d'ū miglio remoti dal detto ocieano, ⁹li quali s'empiano d'acqua dolce, e questo ac¹⁰cade perchè l'acqua dolce è più sottile che l'ac-¹¹qua salata, e per cōseguēza più penetra-¹²tiva.

¹³Qual pesa più, ¹⁴o l'acqua ghiac¹⁵ciata o la nō ¹⁶ghiacciata?

The ocean does not penetrate under the earth, and this we learn from the many and various springs of fresh water which, in many parts of the ocean make their way up from the bottom to the surface. The same thing is farther proved by wells dug beyond the distance of a mile from the said ocean, which fill with fresh water; and this happens because the fresh water is lighter than salt water and consequently more penetrating.

Which weighs most, water when frozen or when not frozen?

956. 1. Allusion may here be made to the mythological explanation of the ebb and flow given in the Edda. Utgardloki says to Thor (Gylfaginning 48): "When thou wert drinking out of the horn, and it seemed to thee that it was slow in emptying a wonder befell, which I should not have believed possible: the other end of the horn lay in

the sea, which thou sawest not; but when thou shalt go to the sea, thou shalt see how much thou hast drunk out of it. And that men now call the ebb tide."

Several passages in various manuscripts treat of the ebb and flow. In collecting them I have been guided by the rule only to transcribe those which named some particular spot.

Leic. 68]

958.

DEL FLUSSO E RIFLUSSO.

²Tutti li mari àno il lor flusso e riflusso in v̄ medesimo tempo, ma pare variarsi, perchè li giorni nō cō³minciano in vn medesimo tempo in tutto l'universo, cōciosiachè, quādo nel nostro emisperio è mezzo ⁴giorno, nell'opposito emisperio è mezzanotte, e nelle congiuntioni oriētali dell'uno e del'altro emispe⁵rio comincia la notte che corre dirieto al giorno, e nelle congiuntioni occidentali d'essi emisperi comincia ⁶il giorno che seguita la notte dalla sua opposita parte; adunque è conchiuso che, ancora che 'l ⁷detto accrescimēto e diminutione delle altezze de' mari sien fatte in vn ⁸medesimo tempo, essi mostrano variarsi per le già dette cagioni; sono adunque sōmerse le acque ⁹nelle uene partite dai fondi de' mari, le quali ramificano dentro al corpo della terra, e rispondono ¹⁰al nascimento de' fiumi, i quali al continvo tolgono dal fondo il mare al mare andato; è tolto innvmē¹¹rabili volte nella superfittie un mare al mare; E se tu volessi, che la luna, apparendo all'orientale parte ¹²del Mare Mediterraneo, comēciasse ad attrarre a se l'acque del mare, ne seguirebbe che immediate ¹³se ne vedrebbe la speriēza al fine oriētale di tal mare predetto; Ancora essendo il Mar Medi¹⁴terrano circa alla ottava parte della circūferenza della sfera dell'acqua, per essere lui ¹⁵lungo 3 mila miglia, e 'l flusso e riflusso nō fa se nō 4 volte in 24 ore, e' nō s'accorderebbe tale ¹⁶effetto col tempo d'esse 24 ore, se esso Mare Mediterrā nō fusse lungo semila miglia, perchè ¹⁷se lo spogliamēto di tanto mare avesse a passare per lo stretto di Gibiltar nel correr dietro ¹⁸alla luna, e' sarebbe si grāde il corso delle acque per tale stretto, e s'alzerebbe in tāta altezza, ¹⁹che dopo esso stretto farebbe tal corso, che per molte miglia infra l'oceano farebbe inōdatione e bolli²⁰menti grandissimi, per la qual cosa sarebbe impossibile passarui, e dopo questo subito l'ocēa²¹no rēderebbe colla medesima furia l'acque ricevute, donde esso le riceve;

OF THE FLOW AND EBB.

All seas have their flow and ebb in the same period, but they seem to vary because the days do not begin at the same time throughout the universe; in such wise as that when it is midday in our hemisphere, it is midnight in the opposite hemisphere; and at the Eastern boundary of the two hemispheres the night begins which follows on the day, and at the Western boundary of these hemispheres begins the day, which follows the night from the opposite side. Hence it is to be inferred that the above mentioned swelling and diminution in the height of the seas, although they take place in one and the same space of time, are seen to vary from the above mentioned causes. The waters are then withdrawn into the fissures which start from the depths of the sea and which ramify inside the body of the earth, corresponding to the sources of rivers, which are constantly taking from the bottom of the sea the water which has flowed into it. A sea of water is incessantly being drawn off from the surface of the sea. And if you should think that the moon, rising at the Eastern end of the Mediterranean sea must there begin to attract to herself the waters of the sea, it would follow that we must at once see the effect of it at the Eastern end of that sea. Again, as the Mediterranean sea is about the eighth part of the circumference of the aqueous sphere, being 3000 miles long, while the flow and ebb only occur 4 times in 24 hours, these results would not agree with the time of 24 hours, unless this Mediterranean sea were six thousand miles in length; because if such a superabundance of water had to pass through the straits of Gibraltar in running behind the moon, the rush of the water through that strait would be so great, and would rise to such a height, that beyond the straits it would for many miles rush so violently into the ocean as to cause floods and tremendous seething, so that it would be impossible to pass through. This agitated ocean would afterwards return the waters it

ecco che adūque mai si ²²passerebbe per tale stretto, e la sperienza mostra che d'ogni ora vi si passa, saluo che quādo il uento ²³viē per la linia della corrēte, allora il riflusso forte s'aumēta; Il mare non alza l'acqua nelli ²⁴stretti che àno vscita ma ben s'ingorga e si ritarda dināti a quelli, onde con furioso moto ²⁵poi ristora il tempo del suo ritardamēto insino al fin del suo moto riflesso.

Leic. 13a]

Come jl flusso e riflusso non è generale, perchè ²in riuiera di Genova non fa niēte, a Vinegia due braccia, tra la Inghilterra e Fiandra fa 18 braccia; ³Come per lo stretto di Sicilia la corrēte è grādissima, perchè di lì passā tutte l'acque de' fiumi che uersā ⁴nel Mare Adriatico.

Leic. 35a]

Nelle parti occidentali, appresso alla Fiandra, il mare cresce e māca ogni 6 ore circa 20 braccia, ²e 22 quādo la luna è in suo fauore, ma le 20 braccia è il suo ordinario, il quale ordinario manifestamēte si uede ³non essere per cavsā della luna; Questa varietà del crescere e discredere del mare ogni 6 ore può ⁴accadere per le ringorgationi delle acque, le quali son condotte nel Mare Mediterraneo da quella quantità de' fiumi dell'Africa Asia ed Evropa, che in esso mare versano le loro acque, le quali per lo stretto di Giblitar infra Abila

had received with equal fury to the place they had come from, so that no one ever could pass through those straits. Now experience shows that at every hour they are passed in safety, but when the wind sets in the same direction as the current, the strong ebb increases [23]. The sea does not raise the water that has issued from the straits, but it checks them and this retards the tide; then it makes up with furious haste for the time it has lost until the end of the ebb movement.

959.

That the flow and ebb are not general; for on the shore at Genoa there is none, at Venice two braccia, between England and Flanders 18 braccia. That in the straits of Sicily the current is very strong because all the waters from the rivers that flow into the Adriatic pass there.

960.

In the West, near to Flanders, the sea rises and decreases every 6 hours about 20 braccia, and 22 when the moon is in its favour; but 20 braccia is the general rule, and this rule, as it is evident, cannot have the moon for its cause. This variation in the increase and decrease of the sea every 6 hours may arise from the damming up of the waters, which are poured into the Mediterranean by the quantity of rivers from Africa, Asia and Europe, which flow into that sea, and the waters which are given to it by those rivers; it pours them to the ocean

958. 23. In attempting to get out of the Mediterranean, vessels are sometimes detained for a considerable time; not merely by the causes mentioned by Leonardo but by the constant current flowing eastwards through the middle of the straits of Gibraltar.

959. A few more recent data may be given here to facilitate comparison. In the Adriatic the tide rises 2 and $\frac{1}{2}$ feet, at Terracina $1\frac{1}{4}$. In the English channel between Calais and Kent it rises from 18 to 20 feet. In the straits of Messina it rises no more than $2\frac{1}{2}$ feet, and that only in stormy weather, but the current is all the stronger. When Leo-

nardo accounts for this by the southward flow of all the Italian rivers along the coasts, the explanation is at least based on a correct observation; namely that a steady current flows southwards along the coast of Calabria and another northwards, along the shores of Sicily; he seems to infer, from the direction of the first, that the tide in the Adriatic is caused by it.

960. 5. Abila, Lat. *Abyla*, Gr. Ἀβύλη, now *Sierra Ximiera* near Ceuta; *Calpe*, Lat. *Calpe*. Gr. Κάληπη, now Gibraltar. Leonardo here uses the ancient names of the rocks, which were known as the Pillars of Hercules.

e Calpe ⁶promōtori rende all'oceano le acque che da essi fiumi li son date, ⁷il quale oceano, astendendosi ⁷infra le isole d'Inghilterra e l'altre più settētrionali, si viene a ringorgare e tenere in collo per diuersi golfi, ⁸li quali, essendo tali mari discostati-si colla lor superfite dal centro del mōdo, àno acquistato peso, il quale, ⁹poichè supera la potentia dell'avenimēto delle acque che lo cavsaano, essa acqua ripiglia im¹⁰peto in contrario al suo avenimēto, e fa impeto contro alli stretti, che li davano l'acque e massime fa ¹¹contra lo stretto di Gibiltar, il quale per alquato spatio di tempo rimā ringorgato e viene a riseruari tut¹²te l'acque che di novo in tal tempo li sō date dalli già detti fiumi, e questa mi pare una delle ragioni che ¹³si potrebbe assegnare della causa d'esso flusso e riflusso, come nella 21^a del 4^a della mia teori¹⁴ca è provato.

through the straits of Gibraltar, between Abila and Calpe [5]. That ocean extends to the island of England and others farther North, and it becomes dammed up and kept high in various gulfs. These, being seas of which the surface is remote from the centre of the earth, have acquired a weight, which as it is greater than the force of the incoming waters which cause it, gives this water an impetus in the contrary direction to that in which it came and it is borne back to meet the waters coming out of the straits; and this it does most against the straits of Gibraltar; these, so long as this goes on, remain dammed up and all the water which is poured up meanwhile by the aforementioned rivers, is pent up [in the Mediterranean]; and this might be assigned as the cause of its flow and ebb, as is shown in the 21st of the 4th of my theory.

alla altezza della rotta vena; ⁵ Quando l'acqua escie della rotta vena della terra, essa osserua la natura dell'altre cose piv gravi ⁶ che l'aria, onde senpre cerca i lochi bassi. ⁷ Vaño ⁸ le uene scorrèdo con ìfinita ramificatione pel corpo della terra.

from below rises to the level of the burst vein. When the water rushes out of a burst vein in the earth it obeys the nature of other things heavier than the air, whence it always seeks the lowest places. [7] These waters traverse the body of the earth with infinite ramifications.

Br. M. 233 δ]

964.

Quella cavsa, che move li umori in tutte le spetie de' corpi · animati e che cō quelle soccorre a ogni lesione, ² move l'acqua dall'infimà profodità del mare alla soīna altezza de' mōti, ³ e come l'acqua si leua dalle ⁴ inferiori parti della vite all'alte tagliature.

The same cause which stirs the humours in every species of animal body and by which every injury is repaired, also moves the waters from the utmost depth of the sea to the greatest heights.

Br. M. 236 δ]

965.

L'acqua è proprio quella che per vitale umore ² di questa · arida terra · è dedicata, e ³ quella cavsa che la move · per le sue ramificate vene · cōtro al natural corso delle cose gravi, è proprio quella che mo⁶ve · li umori · in tutte le spetie de' corpi ⁷ animati; Ma quella, con soīna am⁸atiō de' sua contemplanti, dall'infima pro⁹fondità del mare · all'altissime soīnità ¹⁰ de' mōti si leua, e per le rotte · vene ver¹¹sando · al basso mare · ritorna, · e di novo ¹² con celerità · sormōta, e all' · āt- detto de¹³sceso · ritorna, · così dalle parti intri¹⁴siche · all'esteriori, · così dalle infime alle ¹⁵ superiori, voltādo · quādo con naturale cor¹⁶so ruina, · così insieme cōgiunta, cō ¹⁷ cōtinua revolutione, ¹⁸ per li terrestri meati si ua raggirādo.

It is the property of water that it constitutes the vital human of this arid earth; and the cause which moves it through its ramified veins, against the natural course of heavy matters, is the same property which moves the humours in every species of animal body. But that which crowns our wonder in contemplating it is, that it rises from the utmost depths of the sea to the highest tops of the mountains, and flowing from the opened veins returns to the low seas; then once more, and with extreme swiftness, it mounts again and returns by the same descent, thus rising from the inside to the outside, and going round from the lowest to the highest, from whence it rushes down in a natural course. Thus by these two movements combined in a constant circulation, it travels through the veins of the earth.

G. 70a]

finano, ma solo si leua quādo la secchità⁶ del mōte ne tira; E se per l'avversario la⁷ pioggia, che penetra dalla cima del monte⁸ alle radici sua, che col mare confinano, discē⁹de e mollifica la spiaggia opposta del me¹⁰desimo monte e tira al continuo, si come¹¹ fa la cicogniola che versa per il suo lato più lū¹²go, fusse quella che tira in alto l'acqua del¹³ mare; come se *s n* fusse la pelle del ma¹⁴re, e la pioggia discende dalla cima del mō¹⁵te *a* allo *n* da vn lato e dall'altro lato di¹⁶scēde da *a* allo *m*, senza dubbio que¹⁷sto sarebbe il modo dello stillare a feltro o¹⁸ come si fa per la canna detta cico¹⁹gniola, e senpre l'acqua che à mollificato²⁰ il monte per la gran pioggia, che discende dal²¹li due oppositi lati, tirerebbe a sè al lato²² più lūgo la pioggia *a n* insieme coll'acqua²³ del mare perpetuamēte, se il lato del mōte²⁴ *a m* fusse più lūgo che l'altro *a n*, il che essere²⁵ nō può, perchè nessuna parte di terra che nō²⁶ sia sōmersa dall'oceano sarà più bassa²⁷ d'esso oceano ecc.

which bound it, but only so much rises as the dryness of the mountain attracts. And if, on the contrary, the rain, which penetrates from the summit of the mountain to the base, which is the boundary of the sea; descends and softens the slope opposite to the said mountain and constantly draws the water, like a syphon [11] which pours through its longest side, it must be this which draws up the water of the sea; thus if *s n* were the surface of the sea, and the rain descends from the top of the mountain *a* to *n* on one side, and on the other sides it descends from *a* to *m*, without a doubt this would occur after the manner of distilling through felt, or as happens through the tubes called syphons [17]. And at all times the water which has softened the mountain, by the great rain which runs down the two opposite sides, would constantly attract the rain *a n*, on its longest side together with the water from the sea, if that side of the mountain *a m* were longer than the other *a n*; but this cannot be, because no part of the earth which is not submerged by the ocean can be lower than that ocean.

OF SPRINGS OF WATER ON THE TOPS OF
MOUNTAINS.

It is quite evident that the whole surface of the ocean—when there is no storm—is at an equal distance from the centre of the earth, and that the tops of the mountains are farther from this centre in proportion as they rise above the surface of that sea; therefore if the body of the earth were not like that of man, it would be impossible that the waters of the sea—being so much lower than the mountains—could by their nature rise up to the summits of these mountains. Hence it is to be believed that the same cause which keeps the blood at the top of the head in man keeps the water at the summits of the mountains.

IN CONFIRMATION OF WHY THE WATER GOES
TO THE TOPS OF MOUNTAINS.

I say that just as the natural heat of the blood in the veins keeps it in the head of man,—for when the man is dead the cold blood sinks to the lower parts—and when the sun is hot on the head of a man the blood increases and rises so much, with other humours, that by pressure in the veins pains in the head are often caused; in the same way veins ramify through the body of the earth, and by the natural heat which is distributed throughout the containing body, the water is raised through the veins to the tops of mountains. And this water, which passes through a closed conduit inside the body of the mountain like a dead thing, cannot come forth from its low place unless it is warmed by the vital heat of the spring time. Again, the heat of the element of fire and, by day, the heat of the sun, have power to draw forth the moisture of the low parts of the mountains and to draw them up, in the same way as it draws the clouds and collects their moisture from the bed of the sea.

Leic. 11a]

969.

Come molte vene d'acqua salata si trovano fortemête distanti dal ²mare, e questo potrebbe accadere, perchè tal uena passasse per qualche miniera di sale come quella d'Ungheria, che si caua ³il sale per le grandissime cave, come quasi cavano le pietre.

That many springs of salt water are found at great distances from the sea; this might happen because such springs pass through some mine of salt, like that in Hungary where salt is hewn out of vast caverns, just as stone is hewn.

OF RIVERS.

Leic. 33^d

970.

DELLE DIRIUATIONI DE' FIUMI.

OF THE ORIGIN OF RIVERS.

On the way
in which the
sources of
rivers are
fed.

²Il corpo della terra, a similitudine de' corpi deli animali, è tessuto di ramificationi di uene, le quali son tutte insieme cōgiunte, ³e son costituite a nvtrimento e viuificazione d'essa terra e de' sua creati; partono dalle profondità del mare, e a quelle dopo molta reuolutio⁴ne àno a tornare per li fiumi creati dalle alte rotture d'esse uene; e se tu volessi dire, le pio⁵ve il uerno o la resolutione della neue l'estate essere causa del nascimento de' fiumi, e' si ti potrebbe allegare ⁶li fiumi, che àno origine ne' paesi fochosi dell'Africa, nella quale non piove e meno nevica, perchè il superchio ⁷caldo senpre risolve in aria tutti li nuvoli, che da ueti in là son sospinti; e se tu dicessi che tali fiumi, che uē⁸gono grossi il Luglio e 'l Agosto, son delle nevi che si risolvono il Maggio e 'l Giugno per l'appressamēto del sole alle ne⁹ui delle montagne di Scitia, e che tali resolutioni si riducono in certe valli e fanno laghi, doue poi entrano per le ¹⁰vene e caue sotterane, le

The body of the earth, like the bodies of animals, is intersected with ramifications of waters which are all in connection and are constituted to give nutriment and life to the earth and to its creatures. These come from the depth of the sea and, after many revolutions, have to return to it by the rivers created by the bursting of these springs; and if you chose to say that the rains of the winter or the melting of the snows in summer were the cause of the birth of rivers, I could mention the rivers which originate in the torrid countries of Africa, where it never rains—and still less snows—because the intense heat always melts into air all the clouds which are borne thither by the winds. And if you chose to say that such rivers, as increase in July and August, come from the snows which melt in May and June from the sun's approach to the snows on the mountains of Scythia[9], and that such meltings come down into certain valleys and form lakes, into which they enter by springs and subter-

971.

Libro 9° delli scontri de' fiumi e lor flusso e riflusso, e la medesima ²causa lo crea nel mare per causa dello stretto di Gibilterra, e ancora accade per le uoragini;

Book 9, of the meeting of rivers and of their ebb and flow. The cause is the same in the sea, where it is caused by the straits of Gibraltar; and again it is caused by whirlpools. The tide in estuaries.

³Se due fiumi insieme si scontrano per vna medesima linia, la qual sia retta, poi infra 2 angoli retti ⁴pigliano insieme lor corso, e' seguirà il flusso e riflusso ora a l'uno fiume, ora all'altro, avanti ⁵che sieno vniti e massime, se l'uscita nella loro vnitione nō sarà piv veloce, che quād' erā disuniti; ⁶Qui accadono 4 casi.

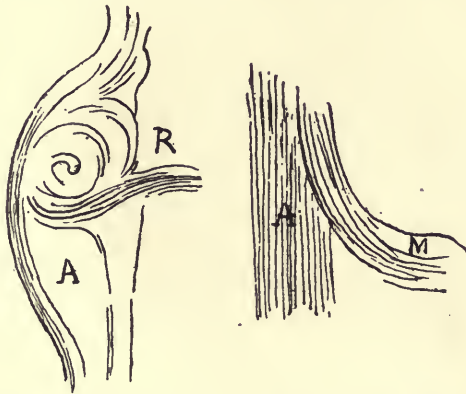

[3] If two rivers meet together to form a straight line, and then below two right angles take their course together, the flow and ebb will happen now in one river and now in the other above their confluence, and principally if the outlet for their united volume is no swifter than when they were separate. Here occur 4 instances.

Leic. 15a]

972.

Quando il fiume minore versa le sue acque nel maggiore, il quale maggiore corra dall'opposita ²riua, allora il corso del fiume minore piegherà il suo corso inverso l'auenimēto del fiume ³maggiore; e questo accade perchè, quando esso maggiore fiume enpie d'acqua tutto il suo letto, e' ⁴gli viene a fare ritroso sotto la bocca di tal fiume, e così spingnie cō seco l'acqua versata dal fiume minore; Quando il fiume minore versa le sue acque nel fiume maggiore, il quale ⁶abbia la corrente alla foce del minore, allora le sue acque si piegheranno inverso la ⁷fu⁷ga del fiume maggiore.

When a smaller river pours its waters into a larger one, and that larger one flows from the opposite direction, the course of the smaller river will bend up against the approach of the larger river; and this happens because, when the larger river fills up all its bed with water, it makes an eddy in front of the mouth of the other river, and so carries the water poured in by the smaller river with its own. When the smaller river pours its waters into the larger one, which runs across the current at the mouth of the smaller river, its waters will bend with the downward movement of the larger river. On the alterations, caused in the courses of rivers by their confluence (972-974).

971. 1. isscontri . . ellor frusso e refrusso alta. 2. chausa . . strett [i] o di gibiltar . . achade . . uoragine. 3. retta e poi. 4. piglino . . refrusso. 5. chessieno . . lusscita nedella. 6. achade 4 chasi.

971. The first two lines of this passage have already been given as No. 957. In the margin, near line 3 of this passage, the text given as No. 919 is written.

972. In the original sketches the word *Arno* is written at the spot here marked *A*, at *R. Riformidi*, and at *M. Mugnone*.

Leic. 166]

973.

Quando le piene de' fiumi sō ²diminuite, allor li angoli acuti, che si generā nelle congiuntioni de' sua rami, si fanno piv corti nelli lor lati e più grossi nelle lor punte, come sia la corrente *a n*, e la corrente *d n*, ⁴le quali si congiunghino insieme in *n*, quando il fiume è nelle sue gran piene; dico che, quando sia ⁵nella predetta dispositione, che se *d n* avanti la piena era piv basso che *a n*, che nel tempo della piena ⁶*d n* sarà piē di rena e fango, il quale nel calare delle acque *d n* porterà uia il fango e rimar⁷rà col fondo basso, e 'l canale *a n*, trovandosi alto, scolerà le sue acque nel basso *d n* e consumerà tutta ⁸la punta del renaio *b n c*, e così rimarrà l'angolo *a c d* piv grosso che l'angolo *a n d*, e di lati più corti, come ⁹prima dissi.

When the fulness of rivers is diminished, then the acute angles formed at the junction of their branches become shorter at the sides and wider at the point; like the current *a n* and the current *d n*, which unite in *n* when the river is at its greatest fulness. I say, that when it is in this condition if, before the fullest time, *d n* was lower than *a n*, at the time of fulness *d n* will be full of sand and mud. When the water *d n* falls, it will carry away the mud and remain with a lower bottom, and the channel *a n* finding itself the higher, will fling its waters into the lower, *d n*, and will wash away all the point of the sand-spit *b n c*, and thus the angle *a c d* will remain larger than the angle *a n d* and the sides shorter, as I said before.

G. 48a]

974.

AQUA.

DEL MOTO D'Ū SUBITO ENPITO FATTO ³DA UN FIUME SOPRA IL SUO LETTO ASCIUTTO.

⁴Tanto è più tardo o veloce il corso dell'acqua, ⁵data dallo isbochato lago al secco fiume, quā⁶to esso fiume fia più largo o piv stretto, over ⁷più piano o cupo in un loco che in un altro, ⁸per quel che è proposto: il flusso e ri⁹flusso del mare che dallo oceano entra nel Me¹⁰diterraneo Mare e de' fiumi, che giostrano ¹¹con lui, alzano tanto più o meno le loro acque, ¹²quanto tal mare è piv o meno stretto.

WATER.

OF THE MOVEMENT OF A SUDDEN RUSH MADE BY A RIVER IN ITS BED PREVIOUSLY DRY.

In proportion as the current of the water given forth by the draining of the lake is slow or rapid in the dry river bed, so will this river be wider or narrower, or shallower or deeper in one place than another, according to this proposition: the flow and ebb of the sea which enters the Mediterranean from the ocean, and of the rivers which meet and struggle with it, will raise their waters more or less in proportion as the sea is wider or narrower.

DELLA VIBRATIONE DELLA TERRA.

²Li corsi sotterranei ³delle acque, sicome quelli che son fatti infra ⁴l'aria e la terra, son quelli che al continuo ⁵cōsumano e profundano li letti del⁶li lor corsi.

Leic. 68]

Il fiume che esce de' mōti pone gran quātità di sassi grossi in nel suo ghiareto, i quali fatti sono ancora ²con parte de' sua angoli e lati, e nel processo del corso conduce pietre minori con angoli piv cōsumati, cioè le grā ³pietre fa minori, e piv oltre pō ghiaia grossa, e poi minvta, e seguita rena grossa, e poi minvta, dipoi procede ⁴litta grossa, e poi piv sottile, e così seguēdo giugne al mare l'acqua turba di rena e di litta; la rena scarica sopra de' ⁵liti marini per il rigurgitamēto dell'ōde salse, e segue la litta di tanta sottilità che par di natura d'acqua, la qual non si ferma sopra de' marī liti, ma ritorna indietro coll'acqua per la sua leuità, perch'è nata di foglie marcie e d'altre cose leuissime, si ⁷che, essendo quasi, com'è detto, di natura d'acqua, essa poi in tempo di bonaccia si scarica e si ferma sopra del ⁸fondo del mare, ove per la sua sottilità si condensa e resiste all'onde che sopra vi passano per la sua lubricità, e ⁹qui stanno i nichì e quest'è terra bianca da far boccali.

Leic. 318]

Tutte l'uscite dell'acque dal monte nel mare portā cō seco li sassi del monte in es²so mare, e per la inōdatione dell'acque marine contro allì sua monti, esse pietre erā ributta³te inverso il mōte, e nell'ādare e nel ritornare indietro delle acque al mare, le pietre insieme cō quel⁴la tornavano, e nel ritornare li angoli loro insieme si percuoteano, e come parte men⁵ resistente alle percosse si cōsumavano e facean le pietre senza angoli, in figu⁶ra rotonda, come ne' liti dell'Elsa si dimostra, e quelle rimanevā piv grosse, che manco sarā remosse ⁷dal lor

OF THE VIBRATION OF THE EARTH.

The subterranean channels of waters, like those which exist between the air and the earth, are those which unceasingly wear away and deepen the beds of their currents. On the alterations in the channels of rivers.

977.

A river that flows from mountains deposits a great quantity of large stones in its bed, which still have some of their angles and sides, and in the course of its flow it carries down smaller stones with the angles more worn; that is to say the large stones become smaller. And farther on it deposits coarse gravel and then smaller, and as it proceeds this becomes coarse sand and then finer, and going on thus the water, turbid with sand and gravel, joins the sea; and the sand settles on the sea-shores, being cast up by the salt waves; and there results the sand of so fine a nature as to seem almost like water, and it will not stop on the shores of the sea but returns by reason of its lightness, because it was originally formed of rotten leaves and other very light things. Still, being almost—as was said—of the nature of water itself, it afterwards, when the weather is calm, settles and becomes solid at the bottom of the sea, where by its fineness it becomes compact and by its smoothness resists the waves which glide over it; and in this shells are found; and this is white earth, fit for pottery. The origin of the sand in rivers (977-978).

978.

All the torrents of water flowing from the mountains to the sea carry with them the stones from the hills to the sea, and by the influx of the sea-water towards the mountains; these stones were thrown back towards the mountains, and as the waters rose and retired, the stones were tossed about by it and in rolling, their angles hit together; then as the parts, which least resisted the blows, were worn off, the stones ceased to be angular and became round in form, as may be seen on the banks of the Elsa. And those remained larger which were less removed

976. 1. viberatio. 2. supterrani [e super acquelli]. 3. so fatti infral. 4. ella. 6. chorsi.

nascimēto; e così quella si faceva minore, che piv si rimouea dal predet⁸to loco, in modo che nel procedere ella si cōuerte in ghiaja minvta, e poi in rena ⁹e in vltimo in fango .; dipoi che 'l mare si discosta dalli predetti monti ., la salsedine lascia¹⁰ta dal mare con altro umore della terra à fatta vna collegatione a essa ghiaja e rena, che la "ghiaja in sasso e la rena in tufo s'è convertita; E di questo si uede l'esemplo ¹²in Adda all'uscire de' monti di Como e in Tesino, Adige, Oglio dall'alpi de' Tedeschi, e il si¹³mile d'Arno dal monte Albano intorno a Mōte Lupo e Capraia, doue li sassi grandissimi son tutti ¹⁴di ghiaia cōgelata di diuerse pietre e colori.

from their native spot; and they became smaller, the farther they were carried from that place, so that in the process they were converted into small pebbles and then into sand and at last into mud. After the sea had receded from the mountains the brine left by the sea with other humours of the earth made a concretion of these pebbles and this sand, so that the pebbles were converted into rock and the sand into tufa. And of this we see an example in the Adda where it issues from the mountains of Como and in the Ticino, the Adige and the Oglio coming from the German Alps, and in the Arno at Monte Albano [13], near Monte Lupo and Capraia where the rocks, which are very large, are all of conglomerated pebbles of various kinds and colours.

980.

Come le ²radici settentrionali di qualunque alpe non sono ancora petrificate; e questo si vede manifestamente doue i fiumi, che le tagliano, corrano inverso settentrione, li quali tagliā ⁴nell'altezze de' mōti le falde delle pietre viue, e nell'congiugniersi colle pianure le predette falde ⁵son tutte di terra da fare boccali, come si dimostra in Val di Lamona al fiume Lamona nel⁶uscire del Mōte Appenino fargli le predette cose nelle sue rive;

Come li fiumi àno tutti segati ⁷e diuisi li membri delle grand'alpi l'uno dall'altro, e questo si manifesta per lo ordine delle ⁸pietre faldate, chè dalla sommità del monte insino al fiume si vedono le corrispondenze delle falde essere ⁹così da l'un de' lati del fiume come dall'altro; Come

That the Northern bases of some Alps are not yet petrified. And this is plainly to be seen where the rivers, which cut through them, flow towards the North; where they cut through the strata in the living stone in the higher parts of the mountains; and, where they join the plains, these strata are all of potter's clay; as is to be seen in the valley of Lamona where the river Lamona, as it issues from the Appenines, does these things on its banks.

That the rivers have all cut and divided the mountains of the great Alps one from the other. This is visible in the order of the stratified rocks, because from the summits of the banks, down to the river the correspondence of the strata in the rocks is visible on either side of the river. That the

GEOLOGICAL PROBLEMS.

Leic. 3a]

985.

In questa tua opera tu ài jn prima a provare, come li nichì in mille braccia d'altura nō ui furō ²portati dal diluio, perchè si uedono a ū medesimo liuello, e si vedono auāzare assai mōti sopra ³esso liuello, e a dimādare se 'l diluio fù per pioggia o per ringorgamēto di mare, e poi ài ⁴a mostrare, che nè per pioggia che ingrossi i fiumi, nè per rigonfiamēto d'esso mare; li nichì, come cosa ⁵grave, non sono sospinti dal mare alli mōti, nè tirati a se dalli fiumi cōtro al corso delle ⁶loro acque.

In this work you have first to prove that the shells at a thousand braccia of elevation were not carried there by the deluge, because they are seen to be all at one level, and many mountains are seen to be above that level; and to inquire whether the deluge was caused by rain or by the swelling of the sea; and then you must show how, neither by rain nor by swelling of the rivers, nor by the overflow of this sea, could the shells—being heavy objects—be floated up the mountains by the sea, nor have carried there by the rivers against the course of their waters.

985. The passages, here given from the MS. Leic., have hitherto remained unknown. Some preliminary notes on the subject are to be found in MS. F 80a and 80b; but as compared with the fuller treatment here given, they are, it seems to me, of secondary interest. They contain nothing

that is not repeated here more clearly and fully. LIBRI, *Histoire des Sciences mathématiques III*, pages 218—221, has printed the text of F 80a and 80b, therefore it seemed desirable to give my reasons for not inserting it in this work.

5 ragioni che si assegneranno; Noi abbiamo nella bibbia, ⁶che il predetto diluvio fù composto di 40 ⁷di e 40 notti di continua e vniversa piog⁸gia, e che tal pioggia alzò dieci ⁹gomiti sopra al più alto mōte dell'univer¹⁰so; E se così fù, che la pioggia fusse vniver¹¹sale, ella vestì di se la nostra ter¹²ra di figura spherica; È la superf¹³tie spherica in ogni sua parte equalmen¹⁴te distante dal ciētro della sva spe¹⁵ra, onde la spera dell'acqua, trovandosi ¹⁶nel modo della detta conditione, elli è ¹⁷impossibile, che l'acqua sopra di lei si mova, ¹⁸perchè l'acqua in se non si move, s'ella non ¹⁹disciēde; addunque l'acqua di tanto dilu²⁰vio come si partì, se qui è provato, non a²¹ver moto? e s'ella si partì, come si mosse, ²²se ella non ādava allo insù? e qui ne mācano²³ le ragiō naturali, òde bisogna per soccor²⁴so di tal dvitatione chiamare il mira²⁵colo per aiuto, o dire che ²⁶tale acqua fu vaporata dal calore del sole.

seem not, for the reasons now to be given: We have it in the Bible that this deluge lasted 40 days and 40 nights of incessant and universal rain, and that this rain rose to ten cubits above the highest mountains in the world. And if it had been that the rain was universal, it would have covered our globe which is spherical in form. And this spherical surface is equally distant in every part, from the centre of its sphere; hence the sphere of the waters being under the same conditions, it is impossible that the water upon it should move, because water, in itself, does not move unless it falls; therefore how could the waters of such a deluge depart, if it is proved that it has no motion? and if it departed how could it move unless it went upwards? Here, then, natural reasons are wanting; hence to remove this doubt it is necessary to call in a miracle to aid us, or else to say that all this water was evaporated by the heat of the sun.

Leic. 86]

987.

DEL DILUVIO E DE'NICHII MARINI.

²Se tu dirai che li nichii, che per li confini d'Italia lontano dalli mari in tāta altezza si ueggono ³alli nostri tempi, siano stati per causa del diluvio che li li lasciò, io ti rispōdo che, credendo tu che ⁴tal diluvio superasse il piv alto monte 7 cubiti, come scrisse chi li misurò, tali nichii che senpre ⁵stanno vicini ai liti del mare, e' doueano restare sopra tali mōtagnie, e nō si poco sopra le radi⁶ci de' monti per tutto a vna medesima altezza a suoli a suoli; E se tu dirai che, essendo tali ⁷nichii vaghi di stare vicini alli liti marini e che, crescēdo in tāta altezza, che li nichii si ⁸partirono da esso lor primo sito e seguitarono l'accrescimēto delle acque insino alla lor ⁹soīma altezza, Qui si risponde che, sendo il nichio anima-

OF THE DELUGE AND OF MARINE SHELLS.

If you were to say that the shells which are to be seen within the confines of Italy now, in our days, far from the sea and at such heights, had been brought there by the deluge which left them there, I should answer that if you believe that this deluge rose 7 cubits above the highest mountains—as he who measured it has written—these shells, which always live near the sea-shore, should have been left on the mountains; and not such a little way from the foot of the mountains; nor all at one level, nor in layers upon layers. And if you were to say that these shells are desirous of remaining near to the margin of the sea, and that, as it rose in height, the shells quitted their first home, and followed the increase of the waters up to their highest level; to this I answer, that the cockle is an animal of not more rapid movement than the snail is out of water, or even somewhat

That marine shells could not go up the mountains.

10le di non più veloce moto, che si sia la lumaca, fori dell'acqua, e qualche cosa più tarda perchè nō nota, ā¹¹zi si fa vn solco per l'arena mediante i lati di tal solco ove s'appoggia, caminerà il dì dalle 3 alle 4. braccia; ¹²adunque questo cō tale moto nō sarà caminato dal mare Adriano insino in Mōferrato di Lon¹³bardia, chè v'è 250 miglia di distantia, in 40 giorni, come disse chi tenne cōto d'esso tempo; e se tu dici che ¹⁴l'onde ve li portarono, essi per la lor gravezza non si reggono, se nō sopra il suo fondo; e se questo nō mi ¹⁵concedi, cōfessami al meno ch'elli aueano a' rimanere nelle cime de' piv alti mōti e ne' laghi che in¹⁶fra li moti si serrano, come lago di Lario o di Como, e 'l Maggiore, e di Fiesole, e di Perugia e simili;

¹⁷E se tu dirai che li nichì son ¹⁸portati dall'onde, essēdo voti e morti, io dico che, dove andauano li morti, poco si rimoueuano da' uiui, e in que¹⁹ste montagne sono trovati tutti i uiui che si cognoscono che sono colli gusci appaiati, e sono ²⁰in vn filo doue non è nessun de' morti, e poco piv alto è trovato doue eran gittati dall'²¹ō²²de tutti li morti colle loro scorze separate, apresso a dove li fiumi cascavano in ²²mare in grā profondità; come Arno, che cadea dalla Gonfolina apresso a ²³Mōte Lupo e quivi lasciaua la ghiaja, la quale ancor si uede, che si è insieme ricōgielata e di pie²⁴tre di uari paesi nature e colori e durezza se n'è fatto vna sola congelatione, e poco più oltre la congelatione dell'are²⁵na s'è fatta tufo, dou'ella s'agiraui in verso Castel Fiorētino, più oltre si scaricava il fango, ²⁶nel quale abitavano i nichì, il quale s'inalzava a gradi, secondo che le piene d'Arno torbido ²⁷in quel mare versauano, e di tempo in tempo s'inalzaua il fondo al mare, j^l quale a gradi ²⁸produceua essi nichì, come si mostra nel taglio di Colle Gonzoli, dirupato dal fiume d'Arno, ²⁹che il suo piede consuma, nel qual taglio si

slower; because it does not swim, on the contrary it makes a furrow in the sand by means of its sides, and in this furrow it will travel each day from 3 to 4 braccia; therefore this creature, with so slow a motion, could not have travelled from the Adriatic sea as far as Monferrato in Lombardy [13], which is 250 miles distance, in 40 days; which he has said who took account of the time. And if you say that the waves carried them there, by their gravity they could not move, excepting at the bottom. And if you will not grant me this, confess at least that they would have to stay at the summits of the highest mountains, in the lakes which are enclosed among the mountains, like the lakes of Lario, or of Como and il Maggiore [16] and of Fiesole, and of Perugia, and others.

And if you should say that the shells were carried by the waves, being empty and dead, I say that where the dead went they were not far removed from the living; for in these mountains living ones are found, which are recognisable by the shells being in pairs; and they are in a layer where there are no dead ones; and a little higher up they are found, where they were thrown by the waves, all the dead ones with their shells separated, near to where the rivers fell into the sea, to a great depth; like the Arno which fell from the Gonfolina near to Monte Lupo [23], where it left a deposit of gravel which may still be seen, and which has agglomerated; and of stones of various districts, natures, and colours and hardness, making one single conglomerate. And a little beyond the sandstone conglomerate a tufa has been formed, where it turned towards Castel Fiorentino; farther on, the mud was deposited in which the shells lived, and which rose in layers according to the levels at which the turbid Arno flowed into that sea. And from time to time the bottom of the sea was raised, depositing these shells in layers, as may be seen in the cutting at Colle Gonzoli, laid open by

987. 13. *Monferrato di Lombardia*. The range of hills of Monferrato is in Piedmont, and Casale di Monferrato belonged, in Leonardo's time, to the Marchese di Mantova.

16. *Lago di Lario*. Lacus Larius was the name given by the Romans to the lake of Como. It is evident that it is here a slip of the pen since the

the words in the MS. are: "*Come Lago di Lario o' l Magore e di Como*." In the MS. after line 16 we come upon a digression treating of the weight of water; this has here been omitted. It is 11 lines long.

23. *Monte Lupo*, compare 970, 13; it is between Empoli and Florence.

uedono manifestamēte li predetti gradi de' nichì in ³⁰ fango azzureggiante, e ui si trova di uarie cose marine; E si è alzata la terra del nostro ³¹ emisperio per tanto più che nō solea, per quāto ella si fece più lieue delle acque, che le manca³²rono per il taglio di Calpe e d'Abila, e altrettanto piv s'è alzata, perchè il peso dell'acque, che di qui mā³³carono, s'aggiunsero alla terra volta all'altro emisperio, E se li nichì fussero stati ³⁴portati dal Torbido diluuiu, essi si sarebbero misti, separatamente l'un dal'altro, infra 'l fango e non ³⁵con ordinati gradi a suoli, come alli nostri tempi si vede.

the Arno which is wearing away the base of it; in which cutting the said layers of shells are very plainly to be seen in clay of a bluish colour, and various marine objects are found there. And if the earth of our hemisphere is indeed raised by so much higher than it used to be, it must have become by so much lighter by the waters which it lost through the rift between Gibraltar and Ceuta; and all the more the higher it rose, because the weight of the waters which were thus lost would be added to the earth in the other hemisphere. And if the shells had been carried by the muddy deluge they would have been mixed up, and separated from each other amidst the mud, and not in regular steps and layers—as we see them now in our time.

Leic. 94]

988.

Di quelli che dicono che i nichì sono per molto spatio e nati remoti dalli mari per la natura del sito e de' cieli, ²che dispone e influiscie tal loco a simile creatione d'animali; a costor si risponderà che, se tale influētia ³d'animali nō potrebbe accadere in vna sola linia, se nō animali di medesima sorte e età, e non il uechio col gio⁴vane, e nō alcun col coperchio e l'altro essere senza sua copritura, e nō l'uno esser rotto e l'altro intero, ⁵e nō l'uno ripieno di rena marina e rottame minvto e grosso d'altri nichì dentro alli nichì ⁶interi, che li son rimasti aperti, e nō le boche de' granchi senza il rimanēte del suo tutto, e non li ni⁷chi d'altre spetie appiccati con loro in forma d'animale che sopra di quelli si mouesse, perchè ancora resta ⁸il uestigio del suo andamento sopra la scorza che lui già, a uso di tarlo sopra il legname, andò cōsumādo; ⁹nō si troverebbero infra loro ossa e denti di pescie, li quali alcuni dimandano saette e altri lingue di ser¹⁰pentì,

As to those who say that shells existed for a long time and were born at a distance from the sea, from the nature of the place and of the cycles, which can influence a place to produce such creatures—to them it may be answered: such an influence could not place the animals all on one line, except those of the same sort and age; and not the old with the young, nor some with an operculum and others without their operculum, nor some broken and others whole, nor some filled with sea-sand and large and small fragments of other shells inside the whole shells which remained open; nor the claws of crabs without the rest of their bodies; nor the shells of other species stuck on to them like animals which have moved about on them; since the traces of their track still remain, on the outside, after the manner of worms in the wood which they ate into. Nor would there be found among them the bones and teeth of fish which some call arrows and others serpents' tongues, nor would so many

The marine shells were not produced away from the sea.

e nō si troverebbero tanti mēbri di diuersi animali insieme vniti se li da liti marini gittati nō fussino, ¹¹e 'l diluuio li nō gli avrebbe portati, perchè le cose gravi più del'acqua nō stanno a galla sopra l'acqua, e le cose pre¹²dette nō sariano in tanta altezza, se già a nuoto ivi sopra dell'acque portate non furono, la qual cosa è impossibile per la lor grauezza; Dove le uallate non ricivono le acque salse del mare, quivi i nichii mai non si ¹⁴vedono, come manifesto si uede nella gran valle d'Arno di sopra alla Gonfolina, sasso per antico vnito ¹⁵con Monte Albano in forma d'altissimo argine, il quale tenea ringorgato tal fiume in modo che prima che versasse nel mare, ¹⁶il quale era dopo ai piedi di tal sasso, conponea 2 grandi laghi, de' quali il primo è, dove oggi si uede fiorire la città di Fiorc¹⁷ze insieme con Prato e Pistoia, e Monte Albano seguiva il resto dell'argine insin doue oggi è posto Serravalle.; dal Val d'Arno ¹⁸di sopra insino Arezzo si creava vno secondo lago, il quale nell'atidetto lago versaua le sue acque, ¹⁹chiuso circa dove oggi si uede Girone, e occupaua tutta la detta valle di sopra per ispatio di 40 miglia ²⁰di lūghezza; questa valle riceue sopra il suo fondo tutta la terra portata dall'acqua da quella intorbidata, la quale ²¹ancora si uede a' piedi di Prato Magno restare altissima, doue li fiumi nō l'anno consumata, e infra essa terra si uedono le pro²²fonde segature de' fiumi che quivi son passati, li quali discēdono dal grā mōte di Prato Magno, nelle quali ²³segature nō si uede vestigio alcuno di nichii e di terra marina; questo lago si congiugnea col lago di Perugia;

²⁴Gran somma di nichii si uede doue li fiumi versano in mare, perchè in tali siti l'acque non so²⁵no tante salse per la mistion dell'acque dolci che con quelle s'uniscono, e 'l segno di ciò si vede doue per antico li Mo²⁶nti Appenini versauano li lor fiumi nel mare Adriano, li quali in gran parte mostrano infra li mōti grā ²⁷somma di nichii insieme coll azzurigno terreno di mare,

portions of various animals be found all together if they had not been thrown on the sea shore. And the deluge cannot have carried them there, because things that are heavier than water do not float on the water. But these things could not be at so great a height if they had not been carried there by the water, such a thing being impossible from their weight. In places where the valleys have not been filled with salt sea water shells are never to be seen; as is plainly visible in the great valley of the Arno above Gonfolina; a rock formerly united to Monte Albano, in the form of a very high bank which kept the river pent up, in such a way that before it could flow into the sea, which was afterwards at its foot, it formed two great lakes; of which the first was where we now see the city of Florence together with Prato and Pistoia, and Monte Albano. It followed the rest of its bank as far as where Serravalle now stands. From the Val d'Arno upwards, as far as Arezzo, another lake was formed, which discharged its waters into the former lake. It was closed at about the spot where now we see Girone, and occupied the whole of that valley above for a distance of 40 miles in length. This valley received on its bottom all the soil brought down by the turbid waters. And this is still to be seen at the foot of Prato Magno; it there lies very high where the rivers have not worn it away. Across this land are to be seen the deep cuts of the rivers that have passed there, falling from the great mountain of Prato Magno; in these cuts there are no vestiges of any shells or of marine soil. This lake was joined with that of Perugia [23].

A great quantity of shells are to be seen where the rivers flow into the sea, because on such shores the waters are not so salt owing to the admixture of the fresh water, which is poured into it. Evidence of this is to be seen where, of old, the Appenines poured their rivers into the Adriatic sea; for there in most places great quantities of shells are to be found, among the mountains, together

e tutti li sassi, che di tal loco si cauano, son pieni di nichii; ²⁸Il medesimo si conosciuere auere fatto Arno, quando cadea dal sasso della Gonfolina nel mare, ²⁹che dopo quella non troppo basso si trovaua, perchè a quelli tempi superaua l'altezza di San Miniato al Tedesco, ³⁰perchè nelle somme altezze di quello si uedono le ripe piene di nichii e ostriche dentro alle sue mura; non si distesero li nichii inverso Val di Nievole, perchè l'acque dolci d'Arno in là non si astendeano;

Comè li nichii nō si ³²partirono dal mare per diluuiu, perchè l'acque, che di uerso la terra ueniuanu, àora che esse tirassino il mare ³³inverso la terra, esse erā quelle che percuoteano il suo fondo, perchè l'acqua, che viene diuerso la terra, à ³⁴più corso che quella del mare, e per cōseguenza è piv potente, entra sotto l'altra acqua del mare ³⁵e rimoue il fondo e accompagna con seco tutte le cose mobili che in quella trova, come son i predetti ³⁶nichii e altre simili cose, e quanto l'acqua, che viē di terra, è piv torbida che quella del mare, tã³⁷to piv si fa potente e grave che quella; adunque io nō ci vedo modo di tirare i predetti nichii tanto in³⁸fra terra, se quii nati nō fussino; se tu mi dicessi, il fiume Loira, che passa per la Francia, ³⁹nell'accrescimēto del mare si copre piv di ottanta miglia di paese, perchè è loco di grā pia⁴⁰nura, e 'l mare s'alza circa braccia 20, e nichii si uengono a trovare in tal pianura, disco⁴¹sta dal mare essa 80 miglia, qui si rispōde che 'l flusso e refluxo ne' nostri mediterrani ⁴²mari nō fanno tanta varietà, perchè in Genovese nō uaria nulla, a Vinegia poco, in A⁴³frica poco, e dove poco varia, poco occupa di paese;

Senpre la corrēte dell'acqua de' fiumi ⁴⁴s'inōda sopra del loco doue li è inpedito il corso; ancora doue essa si ristrignie per passare sotto ⁴⁵li archi de' ponti.

with bluish marine clay; and all the rocks which are torn off in such places are full of shells. The same may be observed to have been done by the Arno when it fell from the rock of Gonfolina into the sea, which was not so very far below; for at that time it was higher than the top of San Miniato al Tedesco, since at the highest summit of this the shores may be seen full of shells and oysters within its flanks. The shells did not extend towards Val di Nievole, because the fresh waters of the Arno did not extend so far.

That the shells were not carried away from the sea by the deluge, because the waters which came from the earth although they drew the sea towards the earth, were those which struck its depths; because the water which goes down from the earth, has a stronger current than that of the sea, and in consequence is more powerful, and it enters beneath the sea water and stirs the depths and carries with it all sorts of movable objects which are to be found in the earth, such as the above-mentioned shells and other similar things. And in proportion as the water which comes from the land is muddier than sea water it is stronger and heavier than this; therefore I see no way of getting the said shells so far in land, unless they had been born there. If you were to tell me that the river Loire [38], which traverses France, covers when the sea rises more than eighty miles of country, because it is a district of vast plains, and the sea rises about 20 braccia, and shells are found in this plain at the distance of 80 miles from the sea; here I answer that the flow and ebb in our Mediterranean Sea does not vary so much; for at Genoa it does not rise at all, and at Venice but little, and very little in Africa; and where it varies little it covers but little of the country.

The course of the water of a river always rises higher in a place where the current is impeded; it behaves as it does where it is reduced in width to pass under the arches of a bridge.

CONFUTATIONE CH'È CONTRO COLOR CHE DICONO, I NICHÌ ESSER PORTATI PER MOLTE GIORNATE DISTANTI DALLI MARI PER CAUSA DEL DILUUIO ²TANT'ALTO CHE SUPERASSE TALE ALTEZZA.

³Dico che il diluio non potè portare le cose nate dal mare allì mōti, se già il mare gonfiando nō creasse inōdazione ⁴insino allì lochi sopradetti, la qual gonfiatione accadere nō può, perchè si darebbe vacuo, e se tu dicessi l'aria quivi ⁵riempirebbe, noi abbiamo concluso il grave non si sostenere sopra il lieue, onde per neciessità si cōclude, esso diluio essere cavato dall'acque piovane, e se così è, tutte esse acque corrono al mare, ⁷e nō corre il mare alle montagne, e se elle corrono al mare, esse spingono li nichì dal lito del mare, e nō le ⁸tirano a se; E se tu dicessi, poichè 'l mare alzò per l'acque piovane, portò essi nichì a tale altezza, ⁹già abbiamo detto che le cose piv gravi dell'acqua nō notā sopra di lei, ma stāno nei fondi, dalle quali nō si ¹⁰rimovono, se nō per cavsa di percussiō d'onda; E se tu dirai che l'onde le portassino in tali lochi alti, noi abbiamo ¹¹prouato che l'onde nelle grā profondità tornano in contrario nel fondo al moto di sopra, la qual cosa ¹²si manifesta per lo intorbidare del mare dal terreno tolto vicino allì liti; Muovesi la cosa piv lieue che l'¹³acqua insieme colla sua onda, ed è lasciata nel piv alto sito della riva dalla piv alta onda; Muouesi la cosa ¹⁴piv grave che l'acqua, sospinta dalla sua òda nella superfittie e dal fondo suo e per queste due conclusioni, che ai lochi ¹⁵sua sarā provate a pieno, noi concludiamo che l'onda superfittiale nō può portare nichì, per essere piv grievi che ¹⁶l'acqua;

¹⁷Quando il diluio auesse avto a portare li nichì trecento e quattro cento miglia distanti dalli mari, esso li avrebbe portati misti con diuerse nature insieme ammontati, e noi vediamo in ¹⁹tal distantie l'ostriche tutte insieme, e le conchilie, e li pesci calamai, e tutti li altri nichì, che stanno insieme a congre²⁰gatione, essere

A CONFUTATION OF THOSE WHO SAY THAT SHELLS MAY HAVE BEEN CARRIED TO A DISTANCE OF MANY DAYS' JOURNEY FROM THE SEA BY THE DELUGE, WHICH WAS SO HIGH AS TO BE ABOVE THOSE HEIGHTS.

I say that the deluge could not carry objects, native to the sea, up to the mountains, unless the sea had already increased so as to create inundations as high up as those places; and this increase could not have occurred because it would cause a vacuum; and if you were to say that the air would rush in there, we have already concluded that what is heavy cannot remain above what is light, whence of necessity we must conclude that this deluge was caused by rain water, so that all these waters ran to the sea, and the sea did not run up the mountains; and as they ran to the sea, they thrust the shells from the shore of the sea and did not draw them towards themselves. And if you were then to say that the sea, raised by the rain water, had carried these shells to such a height, we have already said that things heavier than water cannot rise upon it, but remain at the bottom of it, and do not move unless by the impact of the waves. And if you were to say that the waves had carried them to such high spots, we have proved that the waves in a great depth move in a contrary direction at the bottom to the motion at the top, and this is shown by the turbidity of the sea from the earth washed down near its shores. Anything which is lighter than the water moves with the waves, and is left on the highest level of the highest margin of the waves. Anything which is heavier than the water moves, suspended in it, between the surface and the bottom; and from these two conclusions, which will be amply proved in their place, we infer that the waves of the surface cannot convey shells, since they are heavier than water.

If the deluge had to carry shells three hundred and four hundred miles from the sea, it would have carried them mixed with various other natural objects heaped together; and we see at such distances oysters all together, and sea-snails, and cuttlefish, and all the other shells which congregated together,

trovati tutti insieme morti, e li nichì sole-
tari trovarsi d'istanti l'uno dall'altro, come
ne' liti marittimi ²¹tutto il giorno vediamo;
E se noi troviamo l'ostriche insieme appa-
rētate grādissime, infra le quali assai vedi
quelle ²²che àno ancora il coperchio con-
giunto, a significare che qui furono lasciate
dal mare, che ancor viveano quando fù
²³tagliato lo stretto di Gibilterra; Vedesi
in nelle montagne di Parma e Piacētia le
moltitudini di nichì e coralli ²⁴intarlati, an-
cora appiccati alli sassi, de' quali, quand'io
facevo il grā cavallo di Milano, me ne fù
portato vn grā sacco ne²⁵lla mia fabbrica
da certi villani, che in tal loco furō trovati,
fralli quali ve n'era assai delli conseruati
nella prima bōtā;

²⁶Truovāsi sotto terra e sotto li pro-
fondi cavamenti de' lastroni li legniami
delle travi laurati, fatti già neri, li qua²⁷li
furō trovati a mio tempo in quel di Castel
Fiorētino, e questi in tal loco profondo
v'erano prima che la litta gittata ²⁸dall'Arno
nel mare, che quiui copriva, fusse abban-
donata in tant' altezza, e che le pianvre del
Casentino fussī tanto abbassate ²⁹dal terrē
che àno al continuo di li sgonberato;

³⁰E se tu dicessi, tali ³¹nichì essere
crea³²ti e creano a cō³³tinuo in simili lochi
per la natura del ³⁴sito e de' cieli, che
qui³⁵vi influisce, questa ³⁷tale openione non
³⁸sta in cervelli di tro³⁹po discorso, perchè
qui⁴⁰vi s'envmerā li anni ⁴¹del loro accre-
scimento ⁴²sulle loro scorze, e se ne ⁴³ve-
dono piccoli e grādi, ⁴⁴i quali senza cibo nō
cre⁴⁵scerebbero e non si cibarebbero sã⁴⁶za
moto, e quiui mouere nō si po⁴⁷teano.

all to be found together and dead; and the
solitary shells are found wide apart from each
other, as we may see them on sea-shores every
day. And if we find oysters of very large shells
joined together and among them very many
which still have the covering attached, indi-
cating that they were left here by the sea, and
still living when the strait of Gibraltar
was cut through; there are to be seen, in
the mountains of Parma and Piacenza, a
multitude of shells and corals, full of holes,
and still sticking to the rocks there. When
I was making the great horse for Milan, a
large sack full was brought to me in my
workshop by certain peasants; these were
found in that place and among them were
many preserved in their first freshness.

Under ground, and under the foundations
of buildings, timbers are found of wrought
beams and already black. Such were found
in my time in those diggings at Castel Fiorentino.
And these had been in that deep place before
the sand carried by the Arno into the sea,
then covering the plain, had been raised to
such a height; and before the plains of Casen-
tino had been so much lowered, by the earth
being constantly carried down from them.

[30]And if you were to say that these
shells were created, and were continually
being created in such places by the nature
of the spot, and of the heavens which might
have some influence there, such an opinion
cannot exist in a brain of much reason;
because here are the years of their growth,
numbered on their shells, and there are large
and small ones to be seen which could not
have grown without food, and could not
have fed without motion—and here they could
not move[47].

stoltitia e semplicità di quelli, che uogliono che tali animali fussino alli lochi distanti dai mari portati dal diluio; Come altra setta d'ignoranti ⁶affermano la natura, o i celi auerli in tali lochi creati per iflussi celesti, come in quelli ⁷nō si trovassino l'ossa de' pesci cresciuti cō lugezza di tempo, come nelle scorze de' nichì e lumache nō si potesse ⁸annumerare li anni o i mesi della lor uita, come nelle corna de' buoi e de' castroni e nella ramificatione de' lle piante, che nō furō mai tagliate in alcuna parte; E auendo con tali segni dimostrato e la lunghezza della lor uita ¹⁰essere manifesta, ecco bisogno confessare, che tali animali nō uiuino senza moto per cercare ¹¹il loro cibo e in loro non si uede strumēto da penetrare la terra e 'l sasso, ove si trovano rinchiusi; ¹²Ma in che modo si potrebbe trovare in vna grā lumaca i rottami e parte di molt'altre sorti di nichì di uarie na¹³ture, se ad essa, sopra de' liti marini già morta, non li fussino state gittate dalle onde del mare, come dell'al¹⁴tre cose lieui, che esso gitta a terra? Perchè si truova tanto rottame e nichì interi fra falda e falda di pie¹⁵tra, se già quella sopra del lito nō fusse stata ricoperta da una terra rigittata dal mare, la qual poi si uenne pe¹⁶trificando? E se 'l diluio predetto li auesse in tali siti dal mare portato, tu troveresti essi nichì in nel termi¹⁷ne d'una sola falda, e non al termine di molte; deuonsi poi annumerare le uernate delli ā¹⁸ni, che 'l mare moltiplicaua le falde dell'arena e fango, portatoli da fiumi vicini, e ch'elli scaricava in sui liti sua, e se ¹⁹tu volessi dire, che piv diluui fussino stati a produrre tali falde e nichì infra loro, e' bisognerebbe, ²⁰che ancora tu affermassi ogni āno essere vn tal diluio accaduto; Ancora infra li rot²¹tami di tal nichì si presume in tal sito essere spiaggia di mare, doue tutti i nichì son gittati rotti e diuisi e nō ²²mai appaiati, come infra 'l mare uiui si trovano con due gusci, che fan coperchio l'uno all'altro; E infra ²³le falde della riuiera e de' liti marittimi son trovati de' rottami; E dentro alli termini delle pietre son trovati ²⁴rari e appaiati de' gusci, come quelli che furō lasciati dal mare sotterrati uiui dentro al fango, il qual ²⁵poi si seccò e col tempo petrificò.

places remote from the sea by the deluge. Another sect of ignorant persons declare that Nature or Heaven created them in these places by celestial influences, as if in these places we did not also find the bones of fishes which have taken a long time to grow; and as if, we could not count, in the shells of cockles and snails, the years and months of their life, as we do in the horns of bulls and oxen, and in the branches of plants that have never been cut in any part. Besides, having proved by these signs the length of their lives, it is evident, and it must be admitted, that these animals could not live without moving to fetch their food; and we find in them no instrument for penetrating the earth or the rock where we find them enclosed. But how could we find in a large snail shell the fragments and portions of many other sorts of shells, of various sorts, if they had not been thrown there, when dead, by the waves of the sea like the other light objects which it throws on the earth? Why do we find so many fragments and whole shells between layer and layer of stone, if this had not formerly been covered on the shore by a layer of earth thrown up by the sea, and which was afterwards petrified? And if the deluge before mentioned had carried them to these parts of the sea, you might find these shells at the boundary of one drift but not at the boundary between many drifts. We must also account for the winters of the years during which the sea multiplied the drifts of sand and mud brought down by the neighbouring rivers, by washing down the shores; and if you chose to say that there were several deluges to produce these rifts and the shells among them, you would also have to affirm that such a deluge took place every year. Again, among the fragments of these shells, it must be presumed that in those places there were sea coasts, where all the shells were thrown up, broken, and divided, and never in pairs, since they are found alive in the sea, with two valves, each serving as a lid to the other; and in the drifts of rivers and on the shores of the sea they are found in fragments. And within the limits of the separate strata of rocks they are found, few in number and in pairs like those which were left by the sea, buried alive in the mud, which subsequently dried up and, in time, was petrified.

Leic. 108]

991.

E se tu vuoi dire che tale diluio fu quello che portò tali nichi fuor de' mari cētinaia di miglia, questo nō può acca²dere, essendo stato esso diluio per cause di pioggie, perchè naturalmente le pioggie spingono i fiumi insieme colle cose da loro ³portate inuerso il mare, e nō tirano inuerso de' mōti le cose morte dai liti marittimi., e se tu dicessi che'l diluio poi s'al⁴zò colle sue acque sopra de' mōti, il moto del mare fū si tardo col camino suo contro al corso de' fiumi, che non avrebbe ⁵sopra di se tenuto a noto le cose piv gravi di lui, e se pur l'avesse sostenute, esso nel calare l'avrebbe lasciate in diversi ⁶lochi seminate; Ma come accomoderemo noi li coralli, li quali inverso Mōte Ferrato di Lombardia esser si tutto⁷di trovati intarlati appiccati alli scogli, scoperti dalle corrēti de' fiumi? e li detti scogli sono tutti coperti di parentadi ⁸e famiglie d'ostriche, le quali noi sappiamo che nō si muovono, ma stā senpre appiccate col' ū de' gusci al sasso, e l'altro apro⁹no per cibarsi d'animaluzzi, che notā per l'acque, li quali, credendo trovar bona pastura, diuentano cibo del predetto nichio; non si ¹⁰trova l'arena mista coll'aliga marina essersi petrificata, poichè l'aliga, che la ramezzaua, venne meno; e di questo ¹¹scopre tutto il giorno il Po nelle ruine delle sue ripe.

And if you choose to say that it was the deluge which carried these shells away from the sea for hundreds of miles, this cannot have happened, since that deluge was caused by rain; because rain naturally forces the rivers to rush towards the sea with all the things they carry with them, and not to bear the dead things of the sea shores to the mountains. And if you choose to say that the deluge afterwards rose with its waters above the mountains, the movement of the sea must have been so sluggish in its rise against the currents of the rivers, that it could not have carried, floating upon it, things heavier than itself; and even if it had supported them, in its receding it would have left them strewn about, in various spots. But how are we to account for the corals which are found every day towards Monte Ferrato in Lombardy, with the holes of the worms in them, sticking to rocks left uncovered by the currents of rivers? These rocks are all covered with stocks and families of oysters, which as we know, never move, but always remain with one of their halves stuck to a rock, and the other they open to feed themselves on the animalcules that swim in the water, which, hoping to find good feeding ground, become the food of these shells. We do not find that the sand mixed with seaweed has been petrified, because the weed which was mingled with it has shrunk away, and this the Po shows us every day in the debris of its banks.

Leic. 20a]

992.

Perchè sono trovate l'ossa ²de' grā pesci e le ostriche e coralli e altri diuersi nichi e chiocciole sopra l'alte cime de' mōti ma³rittimi nel medesimo modo che si trovā ne' bassi mari?

Why do we find the bones of great fishes and oysters and corals and various other shells and sea-snails on the high summits of mountains by the sea, just as we find them in low seas?

Other problems
(992—994).

Topographical Notes.

A large part of the texts published in this section might perhaps have found their proper place in connection with the foregoing chapters on Physical Geography. But these observations on Physical Geography, of whatever kind they may be, as soon as they are localised acquire a special interest and importance and particularly as bearing on the question whether Leonardo himself made the observations recorded at the places mentioned or merely noted the statements from hearsay. In a few instances he himself tells us that he writes at second hand. In some cases again, although the style and expressions used make it seem highly probable that he has derived his information from others—though, as it seems to me, these cases are not very numerous—we find, on the other hand, among these topographical notes a great number of observations, about which it is extremely difficult to form a decided opinion. Of what the Master's life and travels may have been throughout his sixty-seven years of life we know comparatively little; for a long course of time, and particularly from about 1482 to 1486, we do not even know with certainty that he was living in Italy. Thus, from a biographical point of view a very great interest attaches to some of the topographical notes, and for this reason it seemed that it would add to their value to arrange them in a group by themselves. Leonardo's intimate knowledge with places, some of which were certainly remote from his native home, are of importance as contributing to decide the still open question as to the extent of Leonardo's travels. We shall find in these notes a confirmation of the view, that the MSS. in which the Topographical Notes occur are in only a very few instances such diaries as may have been in use during a journey. These notes are mostly found in the MSS. books of his later and quieter years, and it is certainly remarkable that Leonardo is very reticent as to the authorities from whom he quotes his facts and observations: For instance, as to the Straits of Gibraltar, the Nile, the Taurus Mountains and the Tigris and Euphrates. Is it likely that he, who declared that in all scientific research, his own experience should be the foundation of his statements (see XIX Philosophy No. 987—991) should here have made an exception to this rule without mentioning it?

As for instance in the discussion as to the equilibrium of the mass of water in the Mediterranean Sea—a subject which, it may be observed, had at that time attracted the interest and study of hardly any other observer. The acute remarks, in Nos. 985—993, on the presence of shells at the tops of mountains, suffice to prove—as it seems to me—that it was not in his nature to allow himself to be betrayed into wide generalisations, extending beyond the limits of his own investigations, even by such brilliant results of personal study.

Most of these Topographical Notes, though suggesting very careful and thorough research, do not however, as has been said, afford necessarily indisputable evidence that that research was Leonardo's own. But it must be granted that in more than one instance probability is in favour of this idea.

Among the passages which treat somewhat fully of the topography of Eastern places by far the most interesting is a description of the Taurus Mountains; but as this text is written in the style of a formal report and, in the original, is associated with certain letters which give us the history of its origin, I have thought it best not to sever it from that connection. It will be found under No. XXI (Letters).

That Florence, and its neighbourhood, where Leonardo spent his early years, should be nowhere mentioned except in connection with the projects for canals, which occupied his attention for some short time during the first ten years of the XVIth century, need not surprise us. The various passages relating to the construction of canals in Tuscany, which are put together at the beginning, are immediately followed by those which deal with schemes for canals in Lombardy; and after these come notes on the city and vicinity of Milan as well as on the lakes of North Italy.

The notes on some towns of Central Italy which Leonardo visited in 1502, when in the service of Cesare Borgia, are reproduced here in the same order as in the note book used during these travels (MS. L., Institut de France). These notes have but little interest in themselves excepting as suggesting his itinerary. The maps of the districts drawn by Leonardo at the time are more valuable (see No. 1054 note). The names on these maps are not written from right to left, but in the usual manner, and we are permitted to infer that they were made in obedience to some command, possibly for the use of Cesare Borgia himself; the fact that they remained nevertheless in Leonardo's hands is not surprising when we remember the sudden political changes and warlike events of the period. There can be no doubt that these maps, which are here published for the first time, are original in the strictest sense of the word, that is to say drawn from observations of the places themselves; this is proved by the fact—among others—that we find among his manuscripts not only the finished maps themselves but the rough sketches and studies for them. And it would perhaps be difficult to point out among the abundant contributions to geographical knowledge published during the XVIth century, any maps at all approaching these in accuracy and finish.

The interesting map of the world, so far as it was then known, which is among the Leonardo MSS. at Windsor (published in the 'Archaeologia' Vol. XI) cannot be attributed to the Master, as the Marchese Girolamo d'Adda has sufficiently proved; it has not therefore been reproduced here.

Such of Leonardo's observations on places in Italy as were made before or after his official travels as military engineer to Cesare Borgia, have been arranged in alphabetical order, under Nos. 1034—1054. The most interesting are those which relate to the Alps and the Appenines, Nos. 1057—1068.

Most of the passages in which France is mentioned have hitherto remained unknown, as well as those which treat of the countries bordering on the Mediterranean, which come at the end of this section. Though these may be regarded as of a more questionable importance in their bearing on the biography of the Master than those which mention places in France, it must be allowed that they are interesting as showing the prominent place which the countries of the East held in his geographical studies. He never once alludes to the discovery of America.

CANAL OF FLORENCE.

Sluices should be made in the valley of la Chiana at Arezzo, so that when, in the summer, the Arno lacks water, the canal may not remain dry: and let this canal be 20 braccia wide at the bottom, and at the top 30, and 2 braccia deep, or 4, so that two of these braccia may flow to the mills and the meadows, which will benefit the country; and Prato, Pistoia and Pisa, as well as Florence, will gain two hundred thousand ducats a year, and will lend a hand and money to this useful work; and the Lucchese the same, for the lake of Sesto will be navigable; I shall direct it to Prato and Pistoia, and cut through Serravalle and make an issue into the lake; for there will be no need of locks or supports, which are not lasting and so will always be giving trouble in working at them and keeping them up.

And know that in digging this canal where it is 4 braccia deep, it will cost 4 dinari the square braccio; for twice the depth 6 dinari, if you are making 4 braccia

Canals in connection with the Arno (1001—1008).

from West to East: Pisa, Luccha, Lago, Seravalle, Pistoja, Prato, Firenze.

solamēte · 2 · banchi ·, cioè · vno dal fondo · del fosso · alla superfite de' labri del fosso ·, e l'altro da essi labri ¹¹ alla · somità del mote · della · terra che d'in sulla · riva · dell'argine · si leua ·; e se fusse di doppia profondità ·, esso argine ¹² cresce solo · uno banco, cioè braccia · 4 ·, che cresce · la metà della · prima spesa, cioè che, dove prima in 2 banchi · si da¹³va · dinari · 4 · in 3, si viene a dare · sei · a 2 dinari · per banco, essendo il fosso in fondo braccia · 16; ancora se'l fosso fusse largo braccia 16 ¹⁴ e profōdo · 4 ·, venēdo · a · 4 L · per opera ·, dinari 4 · Milanese · il braccio quadro ·; il fosso · che in fondo sarà braccia ¹⁵ 32, verrà a stare dinari · 8 · il braccio quadro.

and there are but 2 banks; that is to say one from the bottom of the trench to the surface of the edges of it, and the other from these edges to the top of the ridge of earth which will be raised on the margin of the bank. And if this bank were of double the depth only the first bank will be increased, that is 4 braccia increased by half the first cost; that is to say that if at first 4 dinari were paid for 2 banks, for 3 it would come to 6, at 2 dinari the bank, if the trench measured 16 braccia at the bottom; again, if the trench were 16 braccia wide and 4 deep, coming to 4 lire for the work, 4 Milan dinari the square braccio; a trench which was 32 braccia at the bottom would come to 8 dinari the square braccio.

L. 1a]

1002.

Dal muro d'Arno della ² Giustitia all'argine d'Arno di Sardigna, dove sono ⁴ i muri alle mulina, è braccia ⁵ 7400, cioè migla ² ⁶ e braccia 1400, ⁷ e'l di là d'Arno è braccia 5500.

From the wall of the Arno at [the gate of] la Giustizia to the bank of the Arno at Sardigna where the walls are, to the mills, is 7400 braccia, that is 2 miles and 1400 braccia and beyond the Arno is 5500 braccia.

C. A. 284a; 865a]

1003.

Dirizzare Arno ² di sotto e di sopra; ³ s'auanzerà vn tesoro, ⁴ a tanto per stajoro ⁵ a chi lo vole.

By guiding the Arno above and below a treasure will be found in each acre of ground by whomsoever will.

Br. M. 273b]

1004.

Il muro dalle ² Casaccie si ³ dirizza alla porta di san Niccolò.

The wall of the old houses runs towards the gate of San Nicolo.

. . . banchi "essendo il fosso in fondo braccia 16" anchora . . . fusi largho. 14. [e al] e profōdo. 15. verria dinari.
1002. 2. gussitia. 4. e br. 5. [8000] 7400 coe. 6. br. 7. br.
1003. 1. dirizzare arno. 4. attanto perisstauro. 1004. 1. mro d.lle. 2. casace [con]. 3. diriza. 4. nicolo.

1002. 2. *Giustizia*. By this the Porta della Giustizia seems to be meant; from the XVth to the XVIth centuries it was also commonly known as Porta Guelfa, Porta San Francesco del Renaio, Porta Nuova, and Porta Reale. It was close to the Arno opposite to the Porta San Niccolò, which still exists.

1004. By the side of this text there is an indistinct sketch, resembling that given under No. 973. On the bank is written the word *Casace*. There then follows in the original a passage of 12 lines in which the consequences of the windings of the river are discussed. A larger but equally hasty diagram on the same page represents the shores of

the Arno inside Florence as in two parallel lines. Four horizontal lines indicate the bridges. By the side these measures are stated in figures: 1. (at the Ponte alla Carraja): 230—*largho br. 12 e 2 di spōda e 14 di pile e a 4 pilastri*; 2. (at the Ponte S. Trinità): 188—*largho br. 15 e 2 di spōde he 28 di pilastri for delle spōde e pilastri sō 2*; 3. (at the Ponte vecchio): *pōte lung br. 152 e largo*; 4. (at the Ponte alle Grazie): 290 *ellargo 12 e 2 di spōde e 6 di pile*.

There is, in MS. W. L. 212^b, a sketched plan of Florence, with the following names of gates: *Nicholo—Saminiato—Giorgo—Ghanolini—Porta San Fredian—Prato—Faenza—Ghallo—Pinti—Giustitia*.

Br. M. 274 a]

1005.

640 braccia è il muro rotto, ²e 130 è il muro rimanete, ³col mulino ⁴300 braccia à rotto dal Bisarno in 4 anni.

The ruined wall is 640 braccia; 130 is the wall remaining with the mill; 300 braccia were broken in 4 years by Bisarno.

W. L. 226 a]

1006.

Nō sanno, perchè Arno ²non starà mai in canale; perchè ⁴i fiumi che vi mettono, ⁵nella loro entrata pōgono terreno, e dalla oppo⁷sita parte leuano e ⁸pieganvi il fiume; ⁹6 miglia si fa per Ar¹⁰no dalla Caprona a Li¹¹vorno, e 12 si fa per li ¹²stagni che s'avāzano 32 ¹³miglia, e 16 dalla Caprona ¹⁴in sù, che fā 48 ¹⁵per Arno da Firenze, ¹⁶avanzasi 16 miglia; a Vico miglia 16, ¹⁷e'l canale à 5; ¹⁸da Firenze a Fucechio miglia 40 per ¹⁹acqua d'Arno.

They do not know why the Arno will never remain in a channel. It is because the rivers which flow into it deposit earth where they enter, and wear it away on the opposite side, bending the river in that direction. The Arno flows for 6 miles between la Caprona and Leghorn; and for 12 through the marshes, which extend 32 miles, and 16 from La Caprona up the river, which makes 48; by the Arno from Florence beyond 16 miles; to Vico 16 miles, and the canal is 5; from Florence to Fucechio it is 40 miles by the river Arno.

²⁰Miglia 56 · per Arno ²¹da Firēze a Vico, ²²e pel canale di Pistoia ²³è miglia 44 · adū²⁴que è piv corta 12 ²⁵miglia per canale che per Arno.

56 miles by the Arno from Florence to Vico; by the Pistoia canal it is 44 miles. Thus it is 12 miles shorter by the canal than by the Arno.

1019. On this passage AMORETTI remarks (*Me-
morie Storiche* chap. IX): *Nell'anno stesso lo veggiamo
formare un congegno di carucole e di corde, con cui tras-
portare in più venerabile e più sicuro luogo, cioè nel-
l'ultima arcata della nave di mezzo della metropolitana, la
sacra reliquia del Santo Chiodo, che ivi ancor si venera.
Al fol. 15 del codice segnato Q. R. in 16, egli ci ha la-
sciata di tal congegno una doppia figura, cioè una di
quattro carucole, e una di tre colle rispettive corde, sog-
giungandovi: in Domo alla carucola del Chiodo della
Croce.*

AMORETTI's views as to the mark on the MS.
and the date when it was written are, it may be

observed, wholly unfounded. The MS. L, in which
it occurs, is of the year 1502, and it is very un-
likely that Leonardo was in Milan at that time;
this however would not prevent the remark, which
is somewhat obscure, from applying to the Cathedral
at Milan.

1020. With reference to buildings at Milan see
also Nos. 751 and 756, and Pl. XCV, No. 2 (ex-
plained on p. 52), Pl. C (explained on pages 60—62).

1021. *di arie* is wanting in the original but may
safely be inserted in the context, as the formation
of clouds is under discussion before this text.

forma di grandissima mōtagnia, piena di scogli ³infocati, perchè li razzi del sole, che già era all'orizzonte che rosseggiava, la tigneano del suo colore, e questa tal nugola ⁴attraeva a se tutti li nvgoli piccoli che intorno li stavano, e la nugola grāde nō si mouea di suo loco, anzi ri⁵seruò nella sua sommità il lume del sole insino a una ora e mezzo di notte, tant'era la sua imēsa grādezza; ⁶e infra due ore di notte gienerò si gran vĕto che fu cosa stupēda e inavdita.

cloud in the form of an immense mountain full of rifts of glowing light, because the rays of the sun, which was already close to the horizon and red, tinged the cloud with its own hue. And this cloud attracted to it all the little clouds that were near while the large one did not move from its place; thus it retained on its summit the reflection of the sunlight till an hour and a half after sunset, so immensely large was it; and about two hours after sunset such a violent wind arose, that it was really tremendous and unheard of.

1029.

Come in molti lochi si trovano ve²ne d'acqua che sei ore crescono e sei ore calano, e io per me n'ò veduto vna in sul lago di Como, detta fonte Pliniana, la quale fa il predetto crescere e diminuire in modo che, quando uersa, macina due mulini, e quādo māca, ⁴cala sì ch'egli è come guardare l'acqua in vn profondo pozzo.

In many places there are streams of water which swell for six hours and ebb for six hours; and I, for my part, have seen one above the lake of Como called Fonte Pliniana, which increases and ebbs, as I have said, in such a way as to turn the stones of two mills; and when it fails it falls so low that it is like looking at water in a deep pit.

Italian lakes
(1029—1033).

C. A. 211a; 619a]

1030.

LAGO DI COMO · VAL DI CHIAUENNA.

LAKE OF COMO. VALLEY OF CHIAVENNA.

³Sù pel lago di Como, diuerso la Magnia, è valle Chiauenna doue la Mera fiume mette in esso ⁴lago; qui si truovano mōtagnie · sterili e altissime · con grādi scogli; j queste mōtagnie ⁵li uccielli · d'acqua sono detti marāgoni; qui nascono abeti, larici e pini ·, daini, stābecchi, camoz⁶zi · e terribili · orsi ·; nō ci si può mōtare ·, se non è a 4 piedi ·; vannoci · i villani a'tēpi delle ⁷nevi cō grādi · ingegni · per fare trabocare gli orsi giv · per esse · ripe; queste ⁸mōtagnie strette mettono in mezzo · il fiume ·, sono a destra e a sinistra per spatio ⁹di miglia 20 · tutte a detto modo ·; truovāsi di miglio in miglio bone · osterie ·; su¹⁰per detto fiume · si truovano · cadute · d'acqua di 400 braccia, le quali fanno bel vedere; ¹¹e c'è bō uiuere · a 4 soldi per scotto ·; per esso fiume si cōduce assai · legniam.

Above the lake of Como towards Germany is the valley of Chiavenna where the river Mera flows into this lake. Here are barren and very high mountains, with huge rocks. Among these mountains are to be found the water-birds called gulls. Here grow fir trees, larches and pines. Deer, wild-goats, chamois, and terrible bears. It is impossible to climb them without using hands and feet. The peasants go there at the time of the snows with great snares to make the bears fall down these rocks. These mountains which very closely approach each other are parted by the river. They are to the right and left for the distance of 20 miles throughout of the same nature. From mile to mile there are good inns. Above on the said river there are waterfalls of 400 braccia in height, which are fine to see; and there is good living at 4 soldi the reckoning. This river brings down a great deal of timber.

VAL SASINA.

VAL SASINA.

¹³Val Sasina · viene diuerso · la Italia ·; questa è quasi di simile forma e natura; ¹⁴nascie vi assai mappello ·, e ci sono grā ruine e cadute d'acque.

Val Sasina runs down towards Italy; this is almost the same form and character. There grow here many *mappello* and there are great ruins and falls of water[14].

1029. 2. 3. The fountain is known by this name to this day: it is near Torno, on the Eastern shore of Como. The waters still rise and fall with the flow and ebb of the tide as Pliny described it (Epist. IV, 30; Hist. Nat. II, 206).

1030. 1031. From the character of the handwriting we may conclude that these observations

were made in Leonardo's youth; and I should infer from their contents, that they were notes made in anticipation of a visit to the places here described, and derived from some person (unknown to us) who had given him an account of them.

14. The meaning of *mappello* is unknown.

VALLE D'INTROZZO.

¹⁶ Questa valle · produce assai abeti pini e larici ·, è doue Anbrogio Fereri fa ¹⁷ venire · il suo legname ·; in testa · della Valtellina sono le mōtagnie di Bormio, ¹⁸ terribili · e piene sēpre di neve; qui nascono ermellini.

A BELLAGGIO.

²⁰ A riscontro · a Bellaggio · castello è il fiume Latte ·, el quale · cade da alto ²¹ piv che braccia · 100 dalla vena ·, donde nasce, a piōbo nel lago · cō inestimabile strepito ²² e romore ·; questa vena versa solamēte agosto e settēbre.

VALTELLINA.

²⁴ Valtellina ·, com'è detto, valle circūdata d'alti e terribili · mōti, fa ²⁵ vini potēti · e assai ·, e fa tanto bestiame · che da paesani · è concluso · nascierui ²⁵ piv latte che uino ·; questa è la ualle · doue passa Adda, la quale prima corre ²⁷ piv che 40 miglia per la Magnia ·; questo fiume fa il pescie temolo, il quale ²⁸ vive d'argiēto ·, del quale · se ne truova · assai per la sua rena; ²⁹ j questo paese ognvno · può vēdere pane · e vino, e' l uino vale al piv uno soldo ³⁰ il boccale · e la libra della uitella uno soldo, e' l sale 10 dinari, e' l simile il burro, ³¹ ed è la loro libbra 30 ōcie e l'oua uno soldo la soldata.

C. A. 211δ; 619δ]

A BORMIO.

² A Bormio sono · i bagni ·;—sopra Como otto miglia · è la Pliniana, ³ la quale · cresce e discesce ogni 6 · ore, e' l suo crescere fa ⁴ acqua per 2 mvlina e n'avanza, e' l suo calare fa asciugare la fonte; ⁵ più su 2 miglia · è Nesso · terra, dove cade uno fiume cō grāde ⁶ enpito per una grādissima fessura di mōte ·; Queste gite sō da ⁷ fare nel mese di maggio; E i maggior sassi scoperti che si truovano ⁸ in questi paesi · sono le mōtagnie di Mādello, vicine alle mōtagnie di ⁹ Lecco e di Gravidona inverso Bellin-

VALLEY OF INTROZZO.

This valley produces a great quantity of firs, pines and larches; and from here Anbrogio Fereri has his timber brought down; at the head of the Valtellina are the mountains of Bormio, terrible and always covered with snow; marmots (?) are found there.

BELLAGGIO.

Opposite the castle Bellaggio there is the river Latte, which falls from a height of more than 100 braccia from the source whence it springs, perpendicularly, into the lake with an inconceivable roar and noise. This spring flows only in August and September.

VALTELLINA.

Valtellina, as it is called, is a valley enclosed in high and terrible mountains; it produces much strong wine, and there is so much cattle that the natives conclude that more milk than wine grows there. This is the valley through which the Adda passes, which first runs more than 40 miles through Germany; this river breeds the fish *temolo* which live on silver, of which much is to be found in its sands. In this country every one can sell bread and wine, and the wine is worth at most one soldo the bottle and a pound of veal one soldo, and salt ten dinari and butter the same and their pound is 30 ounces, and eggs are one soldo the lot.

1031.

AT BORMIO.

At Bormio are the baths;—About eight miles above Como is the Pliniana, which increases and ebbs every six hours, and its swell supplies water for two mills; and its ebbing makes the spring dry up; two miles higher up there is Nesso, a place where a river falls with great violence into a vast rift in the mountain. These excursions are to be made in the month of May. And the largest bare rocks that are to be found in this part of the country are the mountains of Mandello near to those of Lecco, and

zona, a 30 miglia da Lecco, ¹⁰e quelle di ualle di Chiavenna, ma la maggiore è quella di Mādello, ¹¹la quale à nella sua basa vna buca diuerso il lago, la quale va sotto ¹²200 scalini, e qui d'ogni tēpo è ghiaccio e vëto.

IN VALSASINA.

¹⁴I Valsasina infra Vimognio et Introbbio, a man destra entrādo per uia di ¹⁵Lecco, si trova la Troggia fiume, che cade da uno sasso altissimo e cadēdo entra ¹⁶sotto terra e lì finisce il fiume; 3 miglia piv là si truovano li edifiti ¹⁷della vena del rame e dello argēto, presso a una terra detta Prato Santo Pietro, ¹⁸e vene di ferro, e cose fantastiche; la Grignia è piv alta mōtagnia ch'abbino ¹⁹questi paesi ed è pelata.

of Gravidona towards Bellinzona, 30 miles from Lecco, and those of the valley of Chiavenna; but the greatest of all is that of Mandello, which has at its base an opening towards the lake, which goes down 200 steps, and there at all times is ice and wind.

IN VAL SASINA.

In Val Sasina, between Vimognio and Introbbio, to the right hand, going in by the road to Lecco, is the river Troggia which falls from a very high rock, and as it falls it goes underground and the river ends there. 3 miles farther we find the buildings of the mines of copper and silver near a place called Pra' Santo Pietro, and mines of iron and curious things. La Grigna is the highest mountain there is in this part, and it is quite bare.

1051. Leonardo inserted this passage on the margin of the circular plan, in water colour, of Imola—see Pl. CXI No. 1.—In the original the fields surrounding the town are light green; the moat, which surrounds the fortifications and the windings of the river Santerno, are light blue. The parts, which have come out blackish close to the river are yellow ochre in the original. The dark groups of houses inside the town are red. At the four points of the compass drawn in the middle of the town Leonardo has written (from right to left): *Mezzodi* (South) at the top; to the left *Scirocho* (South east), *levante* (East), *Greco* (North East), *Septantrione* (North), *Maestro* (North West), *ponente* (West) *Libecco* (South West). The arch in which the plan is drawn is, in the original, 42 centimètres across.

At the beginning of October 1502 Cesare Borgia was shut up in Imola by a sudden revolt of the Condottieri, and it was some weeks before he could release himself from this state of siege (see Gregorovius, *Geschichte der Stadt Rom im Mittelalter*, Vol. VII, Book XIII, 5, 5).

Besides this incident Imola plays no important part in the history of the time. I therefore think myself fully justified in connecting this map, which is at Windsor, with the siege of 1502 and with Leonardo's engagements in the service of Cesare Borgia, because a comparison of these texts, Nos. 1050 and 1051, raise, I believe, the hypothesis to a certainty.

1052. Most of the places here described lie within the district shown in the maps on Pl. CXIII.

1055.

Alessandria in Piedmont (1055. 1056).
In Candia di Lonbardia presso Alessandria della Paglia, facendosi per ²messer Gualtieri di Candia vno pozzo, fu trovato vno principio di navilio grandissimo sotto terra, circa a braccia 10, e perchè ³il legname era nero e bello, parue a esso messer Gualtieri di fare allungare tal bocca di pozzo in forma che i termini ⁴di tal navilio si scopriessino.

At Candia in Lombardy, near Alessandria della Paglia, in making a well for Messer Gualtieri of Candia, the skeleton of a very large boat was found about 10 braccia underground; and as the timber was black and fine, it seemed good to the said Messer Gualtieri to have the mouth of the well lengthened in such a way as that the ends of the boat should be uncovered.

1054. 3. essere. 4. atte. 5. falle.

1055. 2. pozzo . . circha a br. 3. ebbello . . meser . . bocha di pozo. 4. navili si scopriessi.

1054. This passage evidently refers to the making of maps, such as Pl. CXII, CXIII, and CXIV. There is no mention of such works, it is true, excepting in this one passage of MS. L. But this can scarcely be taken as evidence against my view that Leonardo busied himself very extensively at that time in the construction of maps; and all the less since the foregoing chapters clearly prove that at a time so full of events Leonardo would only now and then commit his observations to paper, in the MS. L.

By the side of this text we find, in the original, a very indistinct sketch, perhaps a plan of a position. Instead of this drawing I have here inserted a much clearer sketch of a position from the same MS., L. 82b and 83a. They are the only drawings of landscape, it may be noted, which occur at all in that MS.

1055. 2. *Messer Gualtieri*, the same probably as is mentioned in Nos. 672 and 1344.

Leic. 106]

Alessandria della Paglia in Lombardia non à altre pietre ²da far calcina, se nō miste con infinite cose nate in mare, la quale oggi è remota dal mare piv di 200 miglia.

1056.

At Alessandria della Paglia in Lombardy there are no stones for making lime of, but such as are mixed up with an infinite variety of things native to the sea, which is now more than 200 miles away.

G. 106]

Monbracco, sopra Saluzzo,—²sopra la Certosa vn miglio, al piè di mō Viso,—³à vna miniera di pietra. ⁴faldata, la quale è biāca ⁵come marmo di Carrara, senza ⁶macvle, ch'è della durezza del porfido o più; ⁸della quale il compare ⁹mio, maestro Benedet^{to}to scultore, à in pro¹¹messo di darmene una ¹²tavoletta per li colori, ¹³a di 2 di genaro 1511.

1057.

At Monbracco, above Saluzzo,—a mile above the Certosa, at the foot of Monte Viso, there is a quarry of flakey stone, which is as white as Carrara marble, without a spot, and as hard as porphyry or even harder; of which my worthy gossip, Master Benedetto the sculptor, has promised to give me a small slab, for the colours, the second day of January 1511.

The Alps
(1057—1062).

Leic. 116]

Come son uene che per terremoti o altri accidenti subito nascono e subito mācano; E questo accade in vna mōtagnia in Sauoia, doue certi boschi sprofondarono e lasciarono vno ³baratro profondissimo e lontano circa 4 miglia di lì s'aperse il terreno in certa spiaggia di mōte, e gittò vna ⁴subita inōdatione grossissima d'acqua, la quale nettò tutta vna vallata di terreni laurativi, vignie e case, e fece ⁵gradissimo danno ovunque discorse.

1058.

That there are springs which suddenly break forth in earthquakes or other convulsions and suddenly fail; and this happened in a mountain in Savoy where certain forests sank in and left a very deep gap, and about four miles from here the earth opened itself like a gulf in the mountain, and threw out a sudden and immense flood of water which scoured the whole of a little valley of the tilled soil, vineyards and houses, and did the greatest mischief, wherever it overflowed.

C. A. 86 b; 250 b]

Riuiera d'Arua presso a Ginevra; ²¹/₄ di miglio in Sauoia, doue si fa la fiera ³in San Giovanni nel uillaggio di san Gervagio.

1059.

1057. *Saluzzo* at the foot of the Alps South of Turin.

9. 10. *Maestro Benedetto scultore*; probably some native of Northern Italy acquainted with the place here described. Hardly the Florentine sculptor Benedetto da Majano. Amoretti had published this passage, and M. Ravaisson who gave a French translation of it in the *Gazette des Beaux Arts* (1881, pag. 528), remarks as follows: *Le maître sculpteur que Léonard appelle son "compare" ne serait-il pas Benedetto da Majano, un de ceux qui jugèrent avec lui de la place à donner au David de Michel-Ange, et de qui le Louvre a acquis récemment un buste d'après Philippe Strozzi?*

To this it may be objected that Benedetto da Majano had already lain in his grave fourteen years, in the year 1511, when he is supposed to have given the promise to Leonardo. The colours may have been given to the sculptor Benedetto and the stone may have been in payment for them. From the description of the stone here given we may conclude that it is repeated from hearsay of the sculptor's account of it. I do not understand how, from this observation, it is possible to conclude that Leonardo was on the spot.

1059. An indistinct sketch is to be seen by the text.

Leic. 44]

E questo vedrà come vid'io, chi àdrà so' pra Mòboso, giogo dell'Alpi che diuidono la Francia dalla Italia, la qual montagna à la sua basa che parturisce 3 li 4 fiumi che riga per 4 aspetti contrari tutta l'Europa, e nessuna montagna à le sue base in simile altezza; questa si leua in tanta altura che quasi passa tutti li nuvoli e rare volte vi cade neve, ma sol grādine d'istate quando li nuvoli sono nella maggiore altezza, e questa grandine vi si cōserua in modo, che se nō 6 fusse la retà del caderui e del montarui nuvoli, che non accade 2 volte in vna età, egli ui sarebbe altissima quātità di ghiaccio inalzato dali gradi della grādine, il qua'le di mezzo luglio vi trouai grossissimo, e vidi l'aria sopra di me tenebrosa e 'l sole che percotea la mōta⁸gnia essere piv luminoso quui assai che nelle basse pianure, perchè minor grossezza d'aria s'interpone in⁹fra la cima d'esso monte e 'l sole.

1060. I have vainly enquired of every available authority for a solution of the mystery as to what mountain is intended by the name Mom boso (Comp. Vol. I Nos. 300 and 301). It seems most obvious to refer it to Monte Rosa. *Rosa* is derived from the Keltic *ros* which survives in Breton and in Gaelic, meaning, in its first sense, a mountain spur, but which also—like *Horn*—means a very high peak; thus Monte Rosa would mean literally the High Peak.

1060.

And this may be seen, as I saw it, by any one going up [5] Monbroso, a peak of the Alps which divide France from Italy. The base of this mountain gives birth to the 4 rivers which flow in four different directions through the whole of Europe. And no mountain has its base at so great a height as this, which lifts itself above almost all the clouds; and snow seldom falls there, but only hail in the summer, when the clouds are highest. And this hail lies [unmelted] there, so that if it were not for the absorption of the rising and falling clouds, which does not happen more than twice in an age, an enormous mass of ice would be piled up there by the layers of hail, and in the middle of July I found it very considerable; and I saw the sky above me quite dark, and the sun as it fell on the mountain was far brighter here than in the plains below, because a smaller extent of atmosphere lay between the summit of the mountain and the sun.

1061.

In the mountains of Verona the red marble is found all mixed with cockle shells turned into stone; some of them have been filled at the mouth with the cement which is the substance of the stone; and in some parts they have remained separate from the mass of the rock which enclosed them, because the outer covering of the shell had interposed and had not allowed them to unite with it; while in other places this cement had petrified those which were old and almost stripped the outer skin.

1062.

Bridge of Goertz—Wilbach (?).

6. *in una età*. This is perhaps a slip of the pen on Leonardo's part and should be read *estate* (summer).

1062. There is a slight sketch with this text, Leonardo seems to have intended to suggest, with a few pen-strokes, the course of the Isonzo and of the Wipbach in the vicinity of Gorizia (Goertz). He himself says in another place that he had been in Friuli (see No. 1077 l. 19).

Leic. 10a]

1063.

Quella parte della terra s'è piv alienata dal centro ²del mōdo, la qual s'è fatta piv lieve; E quella parte della terra s'è fatta piv lieve, per la quale ³è passato maggior concorso d'acque, E si è adūque fatta piv lieue quella parte, donde sco⁴la piv numero di fiumi, come l'alpi, che diuidono la Magnia e la Francia dalla Italia, delle quali ⁵escie il Rodano a mezzodì, e il Reno a tramōtana, il Danubio over Danoia a greco, e l' Po a leuā⁶te con invmerabili fiumi che con loro s'accōpagnano, i quali senpre corrono torbidi, dalla terra ⁷da loro portata, al mare;

Mouōsi al continvo i liti marittimi inverso il mezzo del mare e lo ⁸scacciā dal suo primo sito; Riseruerassi la piv bassa parte del Mediterraneo per letto e cor⁹so del Nilo, fiume massimo, che versa in esso mare, E con lui s'accompagneranno tutti li fiumi sua ¹⁰aderēti, che prima in esso mare le loro acque versar soleano, come far si uede al Po colli aderēti ¹¹sua, li quali prima versauā nel mare che infra l'Appennino e le Germaniche alpi si era vnito ¹²col Mare Adriatico;

Come le alpi galliche son la piv alta parte dell' Evropa.

That part of the earth which was lightest remained farthest from the centre of the world; and that part of the earth became the lightest over which the greatest quantity of water flowed. And therefore that part became lightest where the greatest number of rivers flow; like the Alps which divide Germany and France from Italy; whence issue the Rhone flowing Southwards, and the Rhine to the North. The Danube or Tanoia towards the North East, and the Po to the East, with innumerable rivers which join them, and which always run turbid with the soil carried by them to the sea.

The shores of the sea are constantly moving towards the middle of the sea and displace it from its original position. The lowest portion of the Mediterranean will be reserved for the bed and current of the Nile, the largest river that flows into that sea. And with it are grouped all its tributaries, which at first fell into the sea; as may be seen with the Po and its tributaries, which first fell into that sea, which between the Appenines and the German Alps was united to the Adriatic sea.

That the Gallic Alps are the highest part of Europe.

E. 16

1064.

E di questi ò ri²trovato nelli ³sassi dell'alto ⁴Appennino e ⁵massime nel ⁶sasso della Ver⁷na.

And of these I found some in the rocks of the high Appenines and mostly at the rock of La Vernia.

1072. 1. esce del lagho. 2. mezzodi . . mediterano.

1071. 2. This is obviously an exaggeration founded on inaccurate information. Half of 150 miles would be nearer the mark.

1073. The tenor of this note (see lines 2 and 3) seems to me to indicate that this passage was not written in France, but was written from oral information. We have no evidence as to when this note may have been written beyond the circumstance that Fra Giocondo the Veronese Architect left France not before the year 1505. The greater part of the magnificent Château of Blois has now disappeared. Whether this note was made for a special purpose is uncertain. The original form and extent of the Château is shown in Androvet, *Les plus excellents Bastiments de France, Paris MDCVII*, and it may be observed that there is in the middle of the garden a Pavillon somewhat similar to that shown on Pl. LXXXVIII No. 7.

See S. DE LA SAUSSAYE, *Histoire du Château de Blois 4ème édition Blois et Paris* p. 175: *En mariant sa*

fille ainée à François, comte d'Angoulême, Louis XII lui avait constitué en dot les comtés de Blois, d'Asti, de Coucy, de Montfort, d'Etampes et de Vertus. Une ordonnance de François I. lui laissa en 1516 l'administration du comté de Blois.

Le roi fit commencer, dans la même année, les travaux de cette belle partie du château, connue sous le nom d'aile de François I, et dont nous avons donné la description au commencement de ce livre. Nous trouvons en effet, dans les archives du Baron de Joursanvault, une pièce qui en fixe parfaitement la date. On y lit: "Je, Baymon Philippeaux, commis par le Roy à tenir le compte et faire le payement des bastiments, ediffices et reparacions que le dit seigneur fait faire en son chastu de Blois, confesse avoir eu et receu . . . la somme de trois mille livres tournois . . . le cinquième jour de juillet, Pan mil cinq cent et seize. P. 24: Les jardins avaient été decorés avec beaucoup de luxe par les différents possesseurs du château. Il ne reste de tous les bâtimens qu'ils y élevèrent que ceux des officiers chargés de l'ad-

ministration et de la culture des jardins, et un pavillon carré en pierre et en brique flanqué de terrasses à chacun de ses angles. Quoique défiguré par des mesures élevées sur les terrasses, cet édifice est très-digne d'intérêt par l'originalité du plan, la décoration architecturale et le souvenir d'Anne de Bretagne qui le fit construire. Félibien describes the garden as follows: Le jardin haut était fort bien dressé par grands compartimens de toutes sortes de figures, avec des allées de meuriers blancs et des palissades de coudriers. Deux grands berceaux de charpenterie separoient toute la longueur et la largeur du jardin, et dans les quatres angles des allées, où ces berceaux se croissent, il y avoit 4 cabinets, de mesme charpenterie . . . Il y a pas longtemps qu'il y avoit dans ce mesme jardin, à l'endroit où se croissent les allées du milieu, un édifice de figure octogone, de plus de 7 thoises de diamètre et de plus de neuf thoises de haut; avec 4 enfoncements en forme de niches dans les 4 angles des allées. Ce bastiment . . . estoit de charpente mais d'un extraordinairement bien travaillé. On y voyait particulièrement la cordillère qui regnait tout autour en forme de cordon. Car la Reyne affectait de la mettre non-seulement à ses armes et a ses chiffres mais de la faire représenter en divers manières dans tous les ouvrages qu'on lui faisait pour elle . . . le bastiment était couvert en forme de dôme qui dans son milieu avait encore un plus petit dôme, ou lanterne vitrée au-dessus de laquelle était une figure dorée représentant Saint Michel. Les

deux dômes estoient proprement couvert d'ardoise et de plomb doré par dehors; par dedans ils estoient lambrissés d'une menuiserie très delicate. Au milieu de ce Salon il y avait un grand bassin octogone de marbre blanc, dont toutes les faces estoient enrichies de différentes sculptures, avec les armes et les chiffres du Roy Louis XII et de la Reine Anne. Dans ce bassin il y en avait un autre posé sur un piédestal lequel avoit sept piedz de diamètre. Il estait de figure ronde à godrons, avec des masques et d'autres ornements très sçauamment taillés. Du milieu de ce deuxiesme bassin s'y levoit un autre petit piédestal qui portait un troisieme bassin de trois pieds de diamètre, aussy parfaitement bien taillé; c'estoit de ce dernier bassin que jallissoit l'eau qui se répendoit en suite dans les deux autres bassins. Les beaux ouvrages faits d'un marbre esgalement blanc et poli, furent brisez par la pesanteur de tout l'édifice, que les injures de l'air renversèrent de fond en comble.

1074. See Pl. CXV. Lines 1—7 are above, lines 8—10 in the middle of the large island and the word *Isola* is written above *d* in the smaller island; *a* is written on the margin on the bank of the river above l. 1; in the reproduction it is not visible. As may be seen from the last sentence, the observation was made after long study of the river's course, when Leonardo had resided for some time at, or near, Amboise.

⁹Il fiume di Villa¹⁰franca sia cō¹¹dotto a Romorō¹²tino, e sia fatto dal suo ¹³popolo, e li legni¹⁴ami, che conpō¹⁵gono le lor case, ¹⁶siē per barche cō¹⁷dotte a Romorō¹⁸tino; e 'l fiume ¹⁹sia ringorga²⁰to in tātā altez²¹za, che l'acqua ²²si possa cō co²³modo discie²⁴so ridurre ²⁵a Romorōtino.

The river at Villefranche may be conducted to Romorantin which may be done by the inhabitants; and the timber of which their houses are built may be carried in boats to Romorantin[18]. The river may be dammed up at such a height that the waters may be brought back to Romorantin with a convenient fall.

1076.

S'elli è meglio che l'acqua ²vada tutta in alto in una so³la volta, o veramēte in due?

⁴Rispōdesi che in vna sola vol⁵ta la rota nō potreb⁶be sostenere tutta l'acqua ⁷ch'ella leua in due volte, per⁸chè nella mezza volta della ⁹rota leverebbe 100 libbre, ¹⁰e nō più, e s'ell' auesse a leua¹¹re le 200 libbre la uolta inte¹²re, non le leverebbe, se ¹³tal rota nō raddoppiasse il dia¹⁴metro, e raddoppiando tal ¹⁵diametro raddoppiereb¹⁶be il tempo; adūque è meglio ¹⁷e più comodità di spesa a fare ¹⁸tal rota sub ²a che 2 la ecc.

¹⁹Il descie²⁰so della pelle dell'acqua, ²¹perchè toccādo l'acqua diminuireb²²be il peso suo.

²³E se per l'avversario ²⁴s'ingrossasse il ²⁵fugatore dell'ac²⁶qua dieci tan²⁷ti più, che la ²⁸canna dell'²⁹acqua fuggiē³⁰te d'essi, se li ³¹dieci tanti ³²men moto ³³che a questo, ³⁴che vfitio sareb³⁵be il suo? Rispōdesi per la ³⁷g^a di questo ³⁸che dice, che l'acqua ³⁹s'alzerebbe ⁴⁰la decima parte di quel che prima s'alzava ⁴¹nell'altezza di quella canna donde prima sur⁴²gieua.

As to whether it is better that the water should all be raised in a single turn or in two?

The answer is that in one single turn the wheel could not support all the water that it can raise in two turns, because at the half turn of the wheel it would be raising 100 pounds and no more; and if it had to raise the whole, 200 pounds in one turn, it could not raise them unless the wheel were of double the diameter and if the diameter were doubled, the time of its revolution would be doubled; therefore it is better and a greater advantage in expense to make such a wheel of half the size (?) &c.

The going down of the nave of the wheel must not be so low as to touch the surface of the water, because by touching the water its momentum will be lessened.

And if on the contrary the conduit for the water were ten times the size of the pipe for the water escaping from it, and if it had ten times less motion, what would be its office? This is answered by the 9th of this which says that the water would rise in the pipe whence it first flow, to a tenth part of its original height.

pagnie sopra le quali esso adaque⁴rà, e rēderà il paese fertile da nutrire li a⁵bitatori, e farà canale navigabile e mercantile.

⁶Modo che 'l fiume ⁷col suo corso ⁸netti il fondo del ⁹fiume.

¹⁰Per la nona del ³o; ¹¹Quello ch'è più velo¹²cie, più cōsuma il ¹³suo fondo, e per la cō¹⁴versa: l'acqua ch'è più ¹⁵tarda piv lascia ¹⁶di quel che la intorbi¹⁷da;

¹⁸E facciasi il serraglio mobile, che io or¹⁹dinai nel Friuli, del quale, aperto vna cāterat²⁰ta, l'acqua che di quella vsciva cavò il fondo; ²¹addunque nelli diluui de' fiumi si debbono aprire le cate²²ratte de' molini, acciochè tutto il corso del fiume si renda per ca²³teratta in ciascū molino; sieno molte, acciochè ²⁴si faccia maggiore ipeto, e così netterà tutto il fiume; ²⁵e infra le due poste de' moli²⁶ni sia vna delle dette caterat²⁷te; sia vna d'esse poste di tal cate²⁸ratte infra l'uno e l'al²⁹tro molino.

the land which it would water and would render the country fertile to supply food to the inhabitants, and would make navigable canals for mercantile purposes.

The way in which the river in its flow should scour its own channel.

By the ninth of the third; the more rapid it is, the more it wears away its channel; and, by the converse proposition, the slower the water the more it deposits that which renders it turbid.

And let the sluice be movable like the one I arranged in Friuli [19], where when one sluice was opened the water which passed through it dug out the bottom. Therefore when the rivers are flooded, the sluices of the mills ought to be opened in order that the whole course of the river may pass through falls to each mill; there should be many in order to give a greater impetus, and so all the river will be scoured. And below the site of each of the two mills there may be one of the said sluice falls; one of them may be placed below each mill.

C. A. 3296; 993a]

1078.

Vno trabocco è quattro braccia e vno miglio è tre mila d'esse braccia; E 'l braccio si diuide in 12 òcie; ²e l'acqua de' canali à di calo in ogni ceto trabocchi 2 delle dette oncie; adūque 14 oncie ³di calo son necessarie a due mila ottoceto braccia di moto ne' detti canali; seguita che 15 oncie ⁴di calo danno debito moto alli corsi dell'acque dei predetti canali, cioè uno braccio e ^{1/2} ⁵per miglio; E per questo cōcluderemo che l'acqua che si toglie dal fiume di Villa

A trabocco is four braccia, and one mile is three thousand of the said braccia. Each braccio is divided into 12 inches; and the water in the canals has a fall in every hundred trabocchi of two of these inches; therefore 14 inches of fall are necessary in two thousand eight hundred braccia of flow in these canals; it follows that 15 inches of fall give the required momentum to the currents of the waters in the said canals, that is one braccio and a half in the mile. And from this it may be concluded that the water taken from the river of Ville-

Handwritten notes on the right side of the map, describing features or locations.

Handwritten notes at the bottom center of the page.

Franca e si ⁶presta al fiume di Romorantino vuole . . . Dove l'ū fiume mediante la sua bassezza nō ⁷può entrare nell'altro, è necessario ringorgarlo in tale altezza che possa disciēdere ⁸in quel che prima era piv alto.

⁹¶ Vigilia di Sco Anto¹⁰nio tornai da Romo¹¹rōtino in Ābuosa, ¶ ¹²e 'l rē si partì due ¹³di innanti da Romorō¹⁴tino.

¹⁵Da Romorontino insino al ¹⁶pōte a Sodro | si chiama Soudro; ¹⁷e da esso pōte insino a Tours ¹⁸si chiama Schier.

¹⁹Farai saggio del ²⁰liuello di quel canale che si à a cōdur²²re dalla Loira a Romo²³lontino con vn ca²⁴nale largo vn braccio e ²⁵profondo vn braccio.

franche and lent to the river of Romorantin will Where one river by reason of its low level cannot flow into the other, it will be necessary to dam it up, so that it may acquire a fall into the other, which was previously the higher.

The eve of Saint Antony I returned from Romorantin to Amboise, and the King went away two days before from Romorantin.

From Romorantin as far as the bridge at Soudre it is called the Soudre, and from that bridge as far as Tours it is called the Cher.

I would test the level of that channel which is to lead from the Loire to Romorantin, with a channel one braccio wide and one braccio deep.

1078. Lines 6—18 are partly reproduced in the facsimile on p. 254, and the whole of lines 19—25.

The following names are written along the rivers on the larger sketch. *era f* (the Loire) *scier f* (the Cher) three times. *Pōte Sodro* (bridge of the Soudre). *Villa francha* (Villefranche) *banco* (sandbank) *Sodro* (Soudre). The circle below shows the position of Romorantin. The words 'orologio del solē' written below do not belong to the map of the rivērs. The following names are written by the side of the smaller sketch-map:—*tors* (Tours), *Ābosa* (Amboise) *bres*—for Bles (Blois) *mō rica* |||| (Montrichard). *Lione* (Lyons). This map was also published in the 'Saggio' (Milano, 1872) Pl. XXII, and the editors remark: *Forse la linia retta che va da Amboise a Romorantin segna l'audamento proposto d'un Canale, che poi sembra prolungarsi in giù fin dove sta scritto Lione.*

M. Ravaisson has enlarged on this idea in the Gazette des Beaux Arts (1881 p. 530): *Les-traces de Léonard permettent d'entrevoir que le canal commençant soit auprès de Tours, soit auprès de Blois et passant par Romorantin, avec port d'embarquement à Villefranche, devait, au delà de Bourges, traverser l'Allier au-dessous des affluents de la Dore et de la Sioule, aller par Moulins jusqu'à Digoin; enfin, sur l'autre rive de la Loire, dépasser les monts du Charolais et rejoindre la Saône auprès de Mâcon.* It seems to me rash, however, to found so elaborate an hypothesis on these sketches of rivers. The slight stroke going to *Lione* is perhaps only an indication of the direction. — With regard to the Loire compare also No. 988. l. 38.

1079. The meaning is obscure; a more important passage referring to France is to be found under No. 744.

B. 61a]

On the
Germans
(1080, 1081).

Modo come i Tedeschi ingarbugliano e tessano, serāndosi isieme, ²le loro targhe lunghe cōtro a nemici, abassandosi e mettēdo ³vna delle teste a terra, tenēdo il resto in mano.

1080.

The way in which the Germans closing up together cross and interweave their broad leather shields against the enemy, stooping down and putting one of the ends on the ground while they hold the rest in their hand.

B. 63b]

Vsano i Germani · annegare · castellani cō fumo di pivma, solfo ²e risagallo, e fanno durare detti fumi 7 e 8 ore; ācora la ³pula del frumēto fa assai e durabil fumo; e letame secco ancor lui, ⁴ma fa sia mischiato colla sāsa, cioè vliue tratte nel' olio, o vuoi morchia ⁵d'olio.

1081.

The Germans are wont to annoy a garrison with the smoke of feathers, sulphur and realgar, and they make this smoke last 7 or 8 hours. Likewise the husks of wheat make a great and lasting smoke; and also dry dung; but this must be mixed with olive husks, that is olives pressed for oil and from which the oil has been extracted.

Leic. 1b]

The
Danube.

Come le ualli furō già coperte in grā parte da laghi, inperochè senpre il suo terreno fece argine a fiumi, e da mari, i quali poi colla perseueratione de' fiumi ²segarono li monti, e li fiumi coi lor vagabundi corsi portarono via le altre pianvre incluse dalli mōti, e le segature de' mōti so'no note per le falde delle pietre, che si corrispondono nelle lor tagliature fatte dalli detti corsi de' fiumi; ⁴Il Monte Emus che riga la Tratia e la Dardaria e si congiugne col Monte Sardonius, el quale, seguendo ⁵a ponēte, muta il nome di Sardus in | Rebi nel toccare la Dalmatia, poi seguendo a ponēte riga li Illirici ⁶oggi detta Schiavonia, e mvta nome di | Rebi in | Albanus, e seguendo pure a ponēte si muta nel Mōte Odra ⁷a tramōtana, e a mezzodi sopra all' Istria si nomina | Caruancas e si congiugne a ponēte sopra l' Italia col Mōte

1082.

That the valleys were formerly in great part covered by lakes the soil of which always forms the banks of rivers,—and by seas, which afterwards, by the persistent wearing of the rivers, cut through the mountains and the wandering courses of the rivers carried away the other plains enclosed by the mountains; and the cutting away of the mountains is evident from the strata in the rocks, which correspond in their sections as made by the courses of the rivers [4]. The Hæmus mountains which go along Thrace and Dardania and join the Sardonius mountains which, going on to the westward change their name from Sardus to Rebi, as they come near Dalmatia; then turning to the West cross Illyria, now called Sclavonia, changing the name of Rebi to Albanus, and going on still to the West, they change to Mount Odra in the North; and to the South above Istria they are named Caruancas; and to the West above Italy they join the Adula, where the Danube rises [8], which stretches to the East and has a

Adula, ⁸doue nascie il Danubio, il quale s'astende a leuante con corso di 1500 miglia, e la sua linia breuissima è circa ⁹mille miglia, e altrettanto o circa è'l ramo del Monte Adula mutato ne' predetti nomi di mōti; sta a tramontana il monte | Carpatu, il quale termina la larghezza della valle del Danubio, la qual, come dissi, s'astende ¹¹a leuāte cō lunghezza di circa mille miglia, ed è larga doue 200 e doue 300 miglia; questa si mette pel ¹²mezzo il Danubio, primo fiume d'Europa per magnitudine, il qual Danubio si lascia per mezzo di ¹³Austria e Albania e per tramontana Bauaria, Polonia, Ungheria, Valachia e Bosnia; versaua adunque il Danubio | over | Da¹⁴noia nel mare di Ponto, il quale s'astendea insino vicino all'Austria e occupaua tutta la pianura che oggi ¹⁵discorre esso Danubio, e'l segno dico ne mostrano l'ostriche e li nichì e bovoli e cappe e ossa di grā pesci, che an¹⁶cora in molti lochi si trouano nell'alte coste de' predetti mōti; ed era tale mare fatto per la ringorgatione delli ra¹⁷mi del Monte Adula, che s'astendeano a leuante e si congiugneano colli rami del Mōte Tauro, che s'astendono a po¹⁸nēte, e circa alla Bitinia versauā l'acque d'esso Mare di Pōto nel Propontico, cadendo nel Mare Egeo cioè ¹⁹Mar Mediterraneo, doue poi il lungo corso spiccò li rami del Mōte Adula dalli rami del Mōte Tauro; li Mare ²⁰di Pōto s'abassò e scoperse la Val di Danubio colle prenominate provincie, e tutta l'Asia Minore di là dal monte Ta²¹vro per tramontana e la pianura ch'è da Mōte Caucasso al mare di Ponto per ponēte, e la pianura del Ta²²nai dentro alli monti Rifei cioè a' piedi loro; Ecco che 'l mare di Ponto abbassò circa a braccia 1000 ²³nello scoprire di tanta pianura.

course of 1500 miles; its shortest line is about 1000 miles, and the same or about the same is that branch of the Adula mountains changed as to their name, as before mentioned. To the North are the Carpathians, closing in the breadth of the valley of the Danube, which, as I have said extends eastward, a length of about 1000 miles, and is sometimes 200 and in some places 300 miles wide; and in the midst flows the Danube, the principal river of Europe as to size. The said Danube runs through the middle of Austria and Albania and northwards through Bavaria, Poland, Hungary, Wallachia and Bosnia and then the Danube or Donau flows into the Black Sea, which formerly extended almost to Austria and occupied the plains through which the Danube now courses; and the evidence of this is in the oysters and cockle shells and scollops and bones of great fishes which are still to be found in many places on the sides of those mountains; and this sea was formed by the filling up of the spurs of the Adula mountains which then extended to the East joining the spurs of the Taurus which extend to the West. And near Bithynia the waters of this Black Sea poured into the Propontis [Marmora] falling into the Ægean Sea, that is the Mediterranean, where, after a long course, the spurs of the Adula mountains became separated from those of the Taurus. The Black Sea sank lower and laid bare the valley of the Danube with the above named countries, and the whole of Asia Minor beyond the Taurus range to the North, and the plains from mount Caucasus to the Black Sea to the West, and the plains of the Don this side—that is to say, at the foot of the Ural mountains. And thus the Black Sea must have sunk about 1000 braccia to uncover such vast plains.

1083.

WHY THE SEA MAKES A STRONGER
CURRENT IN THE STRAITS OF SPAIN
THAN ELSEWHERE.

A river of equal depth runs
with greater speed in a narrow
space than in a wide one, in
proportion to the difference be-
tween the wider and the narrower
one.

This proposition is clearly
proved by reason confirmed
by experiment. Supposing that
through a channel one mile
wide there flows one mile in
length of water; where the river
is five miles wide each of the
5 square miles will require
¹/₅ of itself to be equal to
the square mile of water re-
quired in the sea, and where
the river is 3 miles wide each
of these square miles will re-
quire the third of its volume
to make up the amount of the
square mile of the narrow part;
as is demonstrated in *f g h* at
the mile marked *n*.

1085. 6. *M'fi*. Leonardo can only mean here the citadel of Cairo on the Mokattam hills.

WHY THE CURRENT OF GIBRALTAR IS ALWAYS GREATER TO THE WEST THAN TO THE EAST.

The reason is that if you put together the mouths of the rivers which discharge into the Mediterranean sea, you would find the sum of water to be larger than that which this sea pours through the straits into the ocean. You see Africa discharging its rivers that run northwards into this sea, and among them the Nile which runs through 3000 miles of Africa; there is also the Bagrada river and the Schelif and others. Likewise Europe pours into it the Don and the Danube, the Po, the Rhone, the Arno, and the Tiber, so that evidently these rivers, with an infinite number of others of less fame, make its great breadth and depth and current; and the sea is not wider than 18 miles at the most westerly point of land where it divides Europe from Africa.

1085.

The gulf of the Mediterranean, as an inland sea, received the principal waters of Africa, Asia and Europe that flowed towards it; and its waters came up to the foot of the mountains that surrounded it and made its shores. And the summits of the Apennines stood up out of this sea like islands, surrounded by salt water. Africa again, behind its Atlas mountains, did not expose uncovered to the sky the surface of its vast plains about 3000 miles in length, and Memphis[6] was on the shores of this sea, and above the plains of Italy, where now birds fly in flocks, fish were wont to wander in large shoals.

1086.

The greatest ebb made anywhere by the Mediterranean is above Tunis, being about two and a half braccia and at Venice it falls two braccia. In all the rest of the Mediterranean sea the fall is little or none.

Tunis.

The Tyrrhene Sea. Alcuni nel Mare Tirreno · vsarano questo modo, cioè ²appicauano vn ācora a l'una delle stremità dell'āteña, ³e dall'altra vna · corda che ī basso s'appiccava a vn ācora, ⁴e nel pugnare attaccavano detta · ācora ai remeggi dell'o⁵posito navilio, e per forza d'argano quello mādavano alla bāda ⁶e gittavano sapon tenero e stoppa īpeciata īfocata sulla ⁷prima bāda dou'era l'ācora attaccata, acciochè, per fugir detto ⁸foco, i difenditori d'esso navilio avessino a fugire da l'op⁹posita bāda, e faciēdo così facevano avmēto · allo spugna¹⁰tore, perchè la galera piv facilmēte per lo cōtrapeso ¹¹andava alla bāda.

Some at the Tyrrhene sea employ this method; that is to say they fastened an anchor to one end of the yard, and to the other a cord, of which the lower end was fastened to an anchor; and in battle they flung this anchor on to the oars of the opponent's boat and by the use of a capstan drew it to the side; and threw soft soap and tow, daubed with pitch and set ablaze, on to that side where the anchor hung; so that in order to escape that fire, the defenders of that ship had to fly to the opposite side; and in doing this they aided to the attack, because the galley was more easily drawn to the side by reason of the counterpoise.

THE LEVANT.

Leic. 31 a]

1090.

Truovāsi nelle rive del Mare Mediterano versare fiumi 300, ²e porti 40 mila 200, e esso mare è di lunghezza miglia 3000; Molte volte s'è accozza³to l'accrescimēto de'mari del riflusso suo e'l soffiare delli venti occidē⁴tali al diluio del Nilo, ed alli fiumi che uersā dal mare di Pōto, ed auere alzato tanto li mari che sō ⁵cō grādissimi diluui discorsi per molti paesi, e questi diluui accadono nel tenpo, che 'l sole ⁶distrugie le neui delli alti mōti d'Etiopia che si leuano alla fredda regiō dell'aria, e si⁷mil-mēte fa l'appressamēto del sole alli mōti della Sarmatia Asiatica e quella d'Europa, ⁸in modo che l'accozzamēto di queste 3 dette cose sono, e sono state cagione di grādissimi diluui, cioè il riflusso del mare, e li uenti occidentali, e la distrutiō delle nevi; è ogni cosa ¹⁰ringorgata nella Siria, Samaria, la Giudea infra Sinai e il Libano, e 'l resto della Siria infra ¹¹il Libano e Mōte

On the shores of the Mediterranean 300 The Lavantine Sea rivers flow, and 40, 200 ports. And this sea is 3000 miles long. Many times has the increase of its waters, heaped up by their backward flow and the blowing of the West winds, caused the overflow of the Nile and of the rivers which flow out through the Black Sea, and have so much raised the seas that they have spread with vast floods over many countries. And these floods take place at the time when the sun melts the snows on the high mountains of Ethiopia that rise up into the cold regions of the air; and in the same way the approach of the sun acts on the mountains of Sarmatia in Asia and on those in Europe; so that the gathering together of these three things are, and always have been, the cause of tremendous floods: that is, the return flow of the sea with the West wind and the melting of the snows. So every river will overflow in Syria, in Samaria, in Judea between Sinai and the Lebanon, and in the rest of Syria between the Lebanon and the Taurus mountains, and in Cilicia, in the Armenian mountains, and in Pamphilia and in Lycia within the hills,

Tauro, e la Cilicia dentro alli mōti Armeni e la Pamfilia e Licia dentro alli mōticelli ¹²e l'Egitto insino al mōte Atlante; Il seno di Persia, che già fu lago grādissimo del Tigris e cade¹³a nel mare d'India, ora à consumato il mōte che li faccia argine, e si è ragguagliato coll'altezza ¹⁴dello Oceano Indico; E se 'l Mare Mediterraneo sequiva il moto suo nel sē d'Arabia, ācor faceva il simile, ¹⁵cioè che si ragguagliava l'altezza Mediterranea colla altezza d'esso Mare Indico.

and in Egypt as far as the Atlas mountains. The gulf of Persia which was formerly a vast lake of the Tigris and discharged into the Indian Sea, has now worn away the mountains which formed its banks and laid them even with the level of the Indian ocean. And if the Mediterranean had continued its flow through the gulf of Arabia, it would have done the same, that is to say, would have reduced the level of the Mediterranean to that of the Indian Sea.

Leic. 31 a]

1091.

The Red
Sea.
(1091. 1092).

Versò l'acqua Mediterrana lungamente pel Mare Rosso, el quale è ²largo cento miglia e lungo mille cinque cento; è tutto pieno di scogli, e à consumato li la³ti del Mōte Sinai, la qual cosa testifica, nō da inōdatione del Mar d'India, che in tali liti percuo⁴tesse, ma da una ruina d'acqua, la qual portaua con seco tutti li fiumi che soprabbon⁵dauano al Mare Mediterraneo, e oltre a questo il riflusso del mare; ⁶e poi, essendo tagliato nel ponente, 3 mila miglia remoto da questo loco, il mōte Calpe è s⁷piccato dal Mōte Abila, e fu tal taglio fatto bassissimo nelle pianure che si trouauā infra Abila ⁸e l'oceano a piè del monte in loco basso, aiutato dal concauamēto di qualche vallata fatta ⁹da alcun fiume che quiui passasse; venne Ercole ad aprire il mare nel ponēte, e allora ¹⁰l'acque marine cominciarono a uersare nell'oceano occidentale, e per la grā bassezza, il Mare ¹¹Rosso rimase piv alto, onde l'acque āno abbandonato il corso di quiui; senpre āno poi versa¹²to l'acque per lo Stretto di Spagna.

For a long time the water of the Mediterranean flowed out through the Red Sea, which is 100 miles wide and 1500 long, and full of reefs; and it has worn away the sides of Mount Sinai, a fact which testifies, not to an inundation from the Indian sea beating on these coasts, but to a deluge of water which carried with it all the rivers which abound round the Mediterranean, and besides this there is the reflux of the sea; and then, a cutting being made to the West 3000 miles away from this place, Gibraltar was separated from Ceuta, which had been joined to it. And this passage was cut very low down, in the plains between Gibraltar and the ocean at the foot of the mountain, in the low part, aided by the hollowing out of some valleys made by certain rivers, which might have flowed here. Hercules came to open the sea to the westward and then the sea waters began to pour into the Western Ocean; and in consequence of this great fall, the Red Sea remained the higher; whence the water, abandoning its course here, ever after poured away through the Straits of Spain.

to the reader an allusion to the legend of the pillars of Hercules.

²Può esser caduta vna mōtagnia e, serrato la bocca ³del Mare Rosso, e proibito l'esito al Mediterraneo, e co⁴si rīgorgato tal mare abbia per esito il trāsito ⁵fra li gioghi Gadetani, perchè similmente abbiā ⁶veduti alli nostri tēpi cadere v̄ monte di sette ⁷miglia e serrare vna valle e farne lago, e così sō ⁸fatti la maggior parte de'laghi da mōti come Lago di ⁹Garda di Como e Lugano, e 'l lago Maggiore; ¹⁰il Mediterraneo poco s'abbassò per il taglio Gaditano ne¹¹li cōfini della Siria e assai in esso taglio, perchè pri¹²ma che tal taglio si creasse, esso mare versaua per scirocco, ¹³e poi s'ebbe a fare la calata, che corresse a tal Gaditano.

¹⁴In *a* cadea l'acqua ¹⁵del Mediterraneo nel oce¹⁶ano.

¹⁷¶ Tutte le pianure che son ¹⁸dalli mari alli mōti, sono ¹⁹già state coperte dall'acque salse; ¶

²⁰¶ Ogni valle è fatta dal suo fiu²¹me e tal proportione è da valle a val²²le, quale è da fiume a fiume; ¶

²³¶ Il massimo fiume del nostro mōdo è ²⁴il Mediterraneo fiume, ¶

²⁵¶ che si move dal principio ²⁶del Nilo all'Oceano occidē²⁷tale, ¶

²⁸e 'la sua suprema altezza ²⁹è nella Mavretania este³⁰riore, e à di corso 10 mila ³¹miglia, prima che si ripatrii ³²col suo Oceano, padre del³³le acque,

³⁴Cioè 3000 il Mediterraneo, 3000 ³⁵il Nilo scoperto, e 3000 il Nilo ³⁶che corre a oriēte ecc.

A mountain may have fallen and closed the mouth of the Red Sea and prevented the outlet of the Mediterranean, and the Mediterranean Sea thus overfilled had for outlet the passage below the mountains of Gades; for, in our own times a similar thing has been seen [6]; a mountain fell seven miles across a valley and closed it up and made a lake. And thus most lakes have been made by mountains, as the lake of Garda, the lakes of Como and Lugano, and the Lago Maggiore. The Mediterranean fell but little on the confines of Syria, in consequence of the Gaditanian passage, but a great deal in this passage, because before this cutting was made the Mediterranean sea flowed to the South East, and then the fall had to be made by its run through the Straits of Gades.

At *a* the water of the Mediterranean fell into the ocean.

All the plains which lie between the sea and mountains were formerly covered with salt water.

Every valley has been made by its own river; and the proportion between valleys is the same as that between river and river.

The greatest river in our world is the Mediterranean river,

which moves from the sources of the Nile to the Western ocean.

And its greatest height is in Outer Mauritania and it has a course of ten thousand miles before it reunites with its ocean, the father of the waters.

That is 3000 miles for the Mediterranean, 3000 for the Nile, as far as discovered and 3000 for the Nile which flows to the East, &c.

1101. *Nello ottanto 9.* It is scarcely likely that Leonardo should here mean 89 A.D. Dr. H. MÜLLER-STRÜBING writes to me as follows on this subject: "With reference to Rhodes Ross says (*Reise auf den Griechischen Inseln*, III 70 ff. 1840), that ancient history affords instances of severe earthquakes at Rhodes, among others one in the second year of the 138th Olympiad=270 B. C.; a remarkably violent one under Antoninus Pius (A. D. 138—161) and again under Constantine and later. But Leonardo expressly speaks of an earthquake "*nel mar di Atalia presso a Rodi*", which is singular. The town of Attalia, founded by Attalus, which is what he no doubt means, was in Pamphylia and more than 150 English miles East of Rhodes in a straight line. Leake and most other geographers identify it with the present town of Adalia. Attalia is rarely mentioned by the ancients, indeed only by Strabo and Pliny and no earthquake is spoken of. I think therefore you are justified in assuming that Leonardo means 1489." In the elaborate catalogue of earthquakes in the East by Selale Dshelal eddin Sayouthy

(an unpublished Arabic MS. in the possession of Prof. SCHEFER, (Membre de l'Institut, Paris) mention is made of a terrible earthquake in the year 867 of the Mohamedan Era corresponding to the year 1489, and it is there stated that a hundred persons were killed by it in the fortress of Kerak. There are three places of this name. Kerak on the sea of Tiberias, Kerak near Tahle on the Libanon, which I visited in the summer of 1876—but neither of these is the place alluded to. Possibly it may be the strongly fortified town of Kerak=Kir Moab, to the West of the Dead Sea. There is no notice about this in ALEXIS PERCY, *Mémoire sur les tremblements de terres ressentis dans la péninsule turco-hellénique et en Syrie (Mémoires couronnés et mémoires des savants étrangers, Académie Royale de Belgique, Tome XXIII)*.

1103. See Pl. LXXXIII. Compare also p. 33 of this Vol. The standing male figure at the side is evidently suggested by Michael Angelo's David. On the same place a slight sketch of horses seems to have been drawn first; there is no reason for

l'acqua in diuersi vasi di graniti porfidi e serpētini, dentro a emicicli, e spā⁵da l'acqua in se medesimi, e dintorno a tal portico inverso tramōtana sia un lago · con vna isoletta ⁶in mezzo, nella quale sia vn folto e ōbroso bosco; l'acque in testa ai pilastri siē uersate in uasi ai piè ⁷de' sua inbasamēti, de' quali si spargano piccoli riuetti;

⁸Partendosi dalla ⁹riuiera di Cilitia inverso meridio si scopre ¹⁰la bellezza dell'isola di Cipri.

in which the water may fall into various vases of granite, porphyry and serpentine, within semi-circular recesses; and the water may overflow from these. And round this portico towards the North there should be a lake with a little island in the midst of which should be a thick and shady wood; the waters at the top of the pilasters should pour into vases at their base, from whence they should flow in little channels.

Starting from the shore of Cilicia towards the South you discover the beauties of the island of Cyprus.

W. XVII 8]

1104.

Dalli meridionali lidi di Cilitia si uede per australe la bell'isola ²di Cipri, la qual fu regnio della dea Venere, e molti incitati dalla sua bellezza ³anno rotte le loro navili e sarte infra li scogli circondati dalle vertiginose ōde; ⁴quiui la bellezza del dolce colle invita i vagabundi navicanti a re⁵crearsi infra le sue fiorite verdure, fralle quali i uēti ragiorādos enpiono l'⁶isola e ⁷l'circūstante mare di suauu odori; o quāte nauu quiui già son sommerse! o quanti ⁷navili rotti negli scogli! quiui si potrebbero vedere invmerabili navili; chi è rotto e mezzo ⁸coperto dall'arena, chi si mostra da poppa, e chi da prua, chi da carena e chi da costa, e parā ⁹a similitudine d'un giudizio, che voglia risuscitare navili morti; tant'è la somma di quelli, che ¹⁰copre tutto il lito settentrionale; quiui i uenti d'aquilone resonādo fan uari e paurosi ¹¹soniti.

From the shore of the Southern coast of Cilicia may be seen to the South the beautiful island of Cyprus, which was the realm of the goddess Venus, and many navigators being attracted by her beauty, had their ships and rigging broken amidst the reefs, surrounded by the whirling waters. Here the beauty of delightful hills tempts wandering mariners to refresh themselves amidst their flowery verdure, where the winds are tempered and fill the island and the surrounding seas with fragrant odours. Ah! how many a ship has here been sunk. Ah! how many a vessel broken on these rocks. Here might be seen barks without number, some wrecked and half covered by the sand; others showing the poop and another the prow, here a keel and there the ribs; and it seems like a day of judgment when there should be a resurrection of dead ships, so great is the number of them covering all the Northern shore; and while the North gale makes various and fearful noises there.

the ancients to be the home and birth place of Aphrodite (Κύπρις in Homer).

1105. The handwriting of this note points to a late date.

F. 50a]

1106.

PERCHÈ L'ACQUA È IN SU MONTI.

4Dallo stretto di Gibilterra al Tanai è miglia 3500, ed è alto vn miglio e $\frac{1}{6}$, dando vn braccio 6 per miglio di cala a ogni acqua che si move me⁷diocremēte, e il Mar Caspio è assai più al⁸to; e nessū de' mōti d'Europa si leua vn ⁹miglio sopra la pelle delli nostri mari; adū¹⁰que si potrebbe dire, che l'acqua ch'è nelle ¹¹cime de' nostri mōti, venisse dall'altezza d'essi ¹²mari e de' fiumi che vi versano, che sō più alti.

WHY WATER IS FOUND AT THE TOP OF MOUNTAINS.

From the straits of Gibraltar to the Don is 3500 miles, that is one mile and $\frac{1}{6}$, giving a fall of one braccio in a mile to any water that moves gently. The Caspian sea is a great deal higher; and none of the mountains of Europe rise a mile above the surface of our seas; therefore it might be said that the water which is on the summits of our mountains might come from the height of those seas, and of the rivers which flow into them, and which are still higher.

1107.

The sea of Azov. Qui seguita che 'l Mare della Tana, che ²confina col Tanai, è la più alta parte ³che abbia il Mare Mediterraneo, il qua⁴le è remoto dallo Stretto di Gibilterra ⁵3500 miglia, come mostra la carta da ⁶naucicare; e à di calo 3500 braccia, cioè uno ⁷miglio e $\frac{1}{6}$; e è più alto adunque que⁸sto mare che mōte che abbia l'occidēte.

Hence it follows that the sea of Azov is the highest part of the Mediterranean sea, being at a distance of 3500 miles from the Straits of Gibraltar, as is shown by the map for navigation; and it has 3500 braccia of descent, that is, one mile and $\frac{1}{6}$; therefore it is higher than any mountains which exist in the West.

The Dardanelles. In nello stretto di Tratia il Mare di Pō²to senpre versa nel Mare Egeo, e mai l'Egeo in lui, e questo diriuu, che 'l Mare Caspio, che cō 400 miglia sta per leuāte colli ³fiumi che ī lui versano, senpre versa per cave sotterrane in esso Mar di Pōto, e 'l simile fa il Tanai ⁴col Danvbio, in modo che senpre esse acque Pōtiche son piv alte che quelle dello Egeo, ⁵e per ciò le piv alte senpre discendono nelle basse, e nō mai le basse nelle alte.

In the Bosphorus the Black Sea flows always into the Egean sea, and the Egean sea never flows into it. And this is because the Caspian, which is 400 miles to the East, with the rivers which pour into it, always flows through subterranean caves into this sea of Pontus; and the Don does the same as well as the Danube, so that the waters of Pontus are always higher than those of the Egean; for the higher always fall towards the lower, and never the lower towards the higher.

1109. See Pl. CX No. 1. In 1453 by order of
 Sultan Mohamed II. the Golden Horn was crossed
 by a pontoon bridge laid on barrels (see Joh. Dukas'
 History of the Byzantine Empire XXXVIII p. 279).
 —The biographers of Michelangelo, Vasari as well
 as Condivi, relate that at the time when Michel-
 angelo suddenly left Rome, in 1506, he entertained
 some intention of going to Constantinople, there to
 serve the Sultan, who sought to engage him, by
 means of certain Franciscan Monks, for the purpose
 of constructing a bridge to connect Constantinople
 with Pera. See VASARI, *Vite* (ed. Sansoni VII, 168):
*Michelangelo, veduto questa furia del papa, dubitando di
 lui, ebbe, secondo che si dice, voglia di andarsene in
 Gostantinopoli a servire il Turco, per mezzo di certi frati*

*di San Francesco, che desiderava averlo per fare un ponte
 che passassi da Constantinopoli a Pera. And CONDIVI,
 Vita di M. Buonaroti chap. 30: Michelangelo allora
 vedendosi condotto a questo, temendo dell'ira del papa,
 pensò d'andarsene in Levante; massimamente essendo
 stato dal Turco ricercato con grandissime promesse per
 mezzo di certi frati di San Francesco, per volersene servire
 in fare un ponte da Costantinopoli a Pera ed in altri
 affari. Leonardo's plan for this bridge was made
 in 1502. We may therefore conclude that at about
 that time the Sultan Bajazet II. had either announced
 a competition in this matter, or that through his
 agents Leonardo had first been called upon to carry
 out the scheme.*

Naval Warfare.—Mechanical Appliances.—Music.

Such theoretical questions, as have been laid before the reader in Sections XVI and XVII, though they were the chief subjects of Leonardo's studies of the sea, did not exclusively claim his attention. A few passages have been collected at the beginning of this section, which prove that he had turned his mind to the practical problems of navigation, and more especially of naval warfare. What we know for certain of his life gives us no data, it is true, as to when or where these matters came under his consideration; but the fact remains certain both from these notes in his manuscripts, and from the well known letter to Ludovico il Moro (No. 1340), in which he expressly states that he is as capable as any man, in this very department.

The numerous notes as to the laws and rationale of the flight of birds, are scattered through several note-books. An account of these is given in the Bibliography of the manuscripts at the end of this work. It seems probable that the idea which led him to these investigations was his desire to construct a flying or aerial machine for man. At the same time it must be admitted that the notes on the two subjects are quite unconnected in the manuscripts, and that those on the flight of birds are by far the most numerous and extensive. The two most important passages that treat of the construction of a flying machine are those already published as Tav. XVI, No. 1 and Tav. XVIII in the "Saggio delle opere di Leonardo da Vinci" (Milan 1872). The passages—Nos. 1120—1125—here printed for the first time and hitherto unknown—refer to the same subject and, with the exception of one already published in the Saggio—No. 1126—they are, so far as I know, the only notes, among the numerous observations on the flight of birds, in which the phenomena are incidentally and expressly connected with the idea of a flying machine.

The notes on machines of war, the construction of fortifications, and similar matters which fall within the department of the Engineer, have not been included in this work, for the reasons given on page 26 of this Vol. An exception has been made in favour of the passages Nos. 1127 and 1128, because they have a more general interest, as bearing on

the important question: whence the Master derived his knowledge of these matters. Though it would be rash to assert that Leonardo was the first to introduce the science of mining into Italy, it may be confidently said that he is one of the earliest writers who can be proved to have known and understood it; while, on the other hand, it is almost beyond doubt that in the East at that time, the whole science of besieging towns and mining in particular, was far more advanced than in Europe. This gives a peculiar value to the expressions used in No. 1127.

I have been unable to find in the manuscripts any passage whatever which throws any light on Leonardo's great reputation as a musician. Nothing therein illustrates VASARI'S well-known statement: Avvenne che morto Giovan Galeazzo duca di Milano, e creato Lodovico Sforza nel grado medesimo anno 1494, fu condotto a Milano con gran riputazione Lionardo al duca, il quale molto si diletta del suono della lira, perchè sonasse; e Lionardo portò quello strumento ch'egli aveva di sua mano fabbricato d'argento gran parte, in forma d'un teschio di cavallo, cosa bizzarra e nuova, acciocchè l'armonia fosse con maggior tuba e più sonora di voce; laonde superò tutti i musici che quivi erano concorsi a sonare.

The only notes on musical matters are those given as Nos. 1129 and 1130, which explain certain arrangements in instruments.

III3.

DEL MOTO DEL MOBILE,—²DEL COGNOSCERE QUÀTO ³IL NÀVILIO SI MOVE PER ORA.

⁴Anno li nostri antichi vsato diuersi ingiegni per vedere che viaggio faccia v̄ navilio per ci⁶ascuna ora, infra li quali Vitruvio ne po⁷ne vno nella sua opera d'Architettura, il qua⁸le modo è fallace insieme cogli altri; e que⁹sto è vna rota da mulino tocca dall'onde ¹⁰marine nelle sue stremità, e mediante le ¹¹intere sue revolutioni si descrive vna linia ¹²retta che rappresenta la linia circūferē¹³tiale di tal rota ridotta in retitudine; ¹⁴Ma questa tale inventionione non è valida, ¹⁵se nō nelle superfitie piane e immobili de' ¹⁶laghi; Ma se l'acqua si move insieme col ¹⁷navilio con equal moto, allora tal rota re¹⁸sta immobile, e se l'acqua è di moto più o mē ¹⁹velocie che 'l moto del nauilio, ancora tal ro²⁰ta non à moto eguale a quel del navilio, in ²¹modo che tale inventionione è di poca validudine; ²²Ecco vn altro modo fatto colla sperictia d'uno ²³spatio noto da una isola a vn altra, e questo si ²⁴fa con un asse o lieua percossa dal uēto, che la percuote o più o ²⁵men velocie, e questo è in Battista Alberti;

ON MOVEMENTS;—TO KNOW HOW MUCH A SHIP ADVANCES IN AN HOUR.

The ancients used various devices to ascertain the distance gone by a ship each hour, among which Vitruvius [6] gives one in his work on Architecture which is just as fallacious as all the others; and this is a mill wheel which touches the waves of the sea at one end and in each complete revolution describes a straight line which represents the circumference of the wheel extended to a straightness. But this invention is of no worth excepting on the smooth and motionless surface of lakes. But if the water moves together with the ship at an equal rate, then the wheel remains motionless; and if the motion of the water is more or less rapid than that of the ship, then neither has the wheel the same motion as the ship so that this invention is of but little use. There is another method tried by experiment with a known distance between one island and another; and this is done by a board or under the pressure of wind which strikes on it with more or less swiftness. This is in Battista Alberti [25].

The ship's logs of Vitruvius, of Alberti and of Leonardo

III3. 6. See VITRUVIUS, *De Architectura lib. X. C.* 14 (p. 264 in the edition of Rose and Müller-Strübing). The German edition published at Bale in 1543 has, on fol. 596, an illustration of the contrivance, as described by Vitruvius.

25. LEON BATTISTA ALBERTI, *De Architectura lib. V.*, c. 12 treats 'de le navi e parti loro', but there is no VOL. II.

reference to the machine, mentioned by Leonardo. Alberti says here: *Noi abbiamo trattato lungamente in altro luogo de' modi de le navi, ma in questo luogo ne abbiamo detto quel tanto che si bisogna.* To this the following note is added in the most recent Italian edition: *Questo libro è tuttora inedito e porta il titolo, secondo Gesnero di 'Liber navis'.*

²⁶Il modo di Battista ²⁷Alberti è fat²⁸to sopra la speri²⁹entia d'uno spa³⁰tio noto da vn³¹a isola a un'altra; ³²Ma tale inventi³³one nō riesce, ³⁴se nō a vn navi-³⁵lio simile a quel ³⁶dove è fatto tale ³⁷speri-³⁸entia, ma ³⁸bisogna che sia ³⁹col medesimo ⁴⁰carico, e me⁴¹desima vela, ⁴²e medesima situ⁴³atiō di vela, e ⁴⁴medesime grā⁴⁵dezze d'onde; ma ⁴⁶il mio modo ser⁴⁷ve a ogni navi⁴⁸lio, si di remi co⁴⁹me vela, e sia pi-⁵⁰ccolo o grāde, ⁵¹o lūgo e alto, ⁵²o basso, sēpre serve.

Battista Alberti's method which is made by experiment on a known distance between one island and another. But such an invention does not succeed excepting on a ship like the one on which the experiment was made, and it must be of the same burden and have the same sails, and the sails in the same places, and the size of the waves must be the same. But my method will serve for any ship, whether with oars or sails; and whether it be small or large, broad or long, or high or low, it always serves [52].

1124.

PER FUGIRE IL PERICOLO DELLA RUINA.

²Può accadere la ruina di tali strumēti per 2 modi, de' quali ³il primo è del rompersi lo strumēto, secondario fia quā⁴do lo strumento si uoltasse per taglio o vicino a esso taglio, ⁵perchè senpre debbe discendere per grande obbliquità e quasi ⁶per la linia dell'equalità; In quanto al primo, ⁷del rompersi lo strumēto, si riparerà col farlo di somma for⁸tezza, per qualunque linia esso si potesse voltare, e assai distante l'un centro dall'altro, cioè nel⁹lo strumēto di 30 braccia di lunghezza essi centri sieno distanti 4 braccia l'un dall'altro.

TO ESCAPE THE PERIL OF DESTRUCTION.

Destruction to such a machine may occur in two ways; of which the first is the breaking of the machine. The second would be when the machine should turn on its edge or nearly on its edge, because it ought always to descend in a highly oblique direction, and almost exactly balanced on its centre. As regards the first—the breaking of the machine—that may be prevented by making it as strong as possible; and in whichever direction it may tend to turn over, one centre must be very far from the other; that is, in a machine 30 braccia long the centres must be 4 braccia one from the other.

Mz. 13 a]

1128. Venturi has given another short text about the Greek fire in a French translation (Essai § XIV). He adds that the original text is to be found in MS. B. 30 (?). Libri speaks of it in a note as follows (*Histoire des sciences mathématiques en Italie Vol. II* p. 129): *La composition du feu grégeois est une des choses qui ont été les plus cherchées et qui sont encore les plus douteuses. On dit qu'il fut inventé au septième siècle de Père chrétienne par l'architecte Callinique (Constantini Porphyrogenetae opera, Lugd. Batav. 1617, — in-8^{vo}; p. 172, de admin. imper. exp. 48), et il se trouve souvent mentionné par les Historiens Byzantins. Tantôt on le lançait avec des machines, comme on lancerait une bouche, tantôt on le soufflait avec de longs tubes, comme on soufflerait un gaz ou un liquide enflammé (Annae Comnenae Alexias, p. 335, lib. XI.—Aeliani et Leonis, imperatoris tactica, Lugd.-Bat. 1613, in-4. part. 2^a, p. 322, Leonis tact. cap. 19.—Joinville, histoire du Saint Louis collect. Petitot tom. II, p. 235). Les écrivains contemporains disent que l'eau ne pouvait pas éteindre ce feu, mais qu'avec du vinaigre et du sable on y parvenait.*

VOL. II.

Suivant quelques historiens le feu grégeois était composé de soufre et de résine. Marcus Graecus (Liber ignium, Paris, 1804, in-4^o) donne plusieurs manières de le faire qui ne sont pas très intelligibles, mais parmi lesquelles on trouve la composition de la poudre à canon. Léonard de Vinci (MSS. de Léonard de Vinci, vol. B. f. 30) dit qu'on le faisait avec du charbon de saule, du salpêtre, de l'eau de vie, de la résine, du soufre, de la poix et du camphre. Mais il est probable que nous ne savons pas qu'elle était sa composition, surtout à cause du secret qu'en faisaient les Grecs. En effet, l'empereur Constantin Porphyrogénète recommande à son fils de ne jamais en donner aux Barbares, et de leur répondre, s'ils en demandent, qu'il avait été apporté du ciel par un ange et que le secret en avait été confié aux Chrétiens (Constantini Porphyrogenetae opera, p. 26—27, de admin. imper., cap. 12).

1129. This chapter consists of explanations of the sketches shown on Pl. CXXI. Lines 1 and 2 of the text are to be seen at the top at the left hand side of the first sketch of a drum. Lines 3—5 refer to the

1130. In the original there are some more sketches, to which the text, from line 6, refers. They are studies for a contrivance exactly like the cylinder in our musical boxes.

XIX.

*Philosophical Maxims. Morals. Polemics and
Speculations.*

Vasari indulges in severe strictures on Leonardo's religious views. He speaks, among other things, of his "capricci nel filosofar delle cose naturali" and says on this point: "Per il che fece nell'animo un concetto sì eretico che e' non si accostava a qualsi voglia religione, stimando per avventura assai più lo esser filosofo che cristiano" (see the first edition of 'Le Vite'). But this accusation on the part of a writer in the days of the Inquisition is not a very serious one—and the less so, since, throughout the manuscripts, we find nothing to support it.

Under the heading of "Philosophical Maxims" I have collected all the passages which can give us a clear comprehension of Leonardo's ideas of the world at large. It is scarcely necessary to observe that there is absolutely nothing in them to lead to the inference that he was an atheist. His views of nature and its laws are no doubt very unlike those of his contemporaries, and have a much closer affinity to those which find general acceptance at the present day. On the other hand, it is obvious from Leonardo's will (see No. 1566) that, in the year before his death, he had professed to adhere to the fundamental doctrines of the Roman Catholic faith, and this evidently from his own personal desire and impulse.

The incredible and demonstrably fictitious legend of Leonardo's death in the arms of Francis the First, is given, with others, by Vasari and further embellished by this odious comment: "Mostrava tuttavia quanto avea offeso Dio e gli uomini del mondo, non avendo operato nell'arte come si conveniva." This last accusation, it may be remarked, is above all evidence of the superficial character of the information which Vasari was in a position to give about Leonardo. It seems to imply that Leonardo was disdainful of diligent labour. With regard to the second, referring to Leonardo's morality and dealings with his fellow men, Vasari himself nullifies it by asserting the very contrary in several passages. A further refutation may be found in the following sentence from

the letter in which Melzi, the young Milanese nobleman, announces the Master's death to Leonardo's brothers: Credo siate certificati della morte di Maestro Lionardo fratello vostro, e mio quanto optimo padre, per la cui morte sarebbe impossibile che io potesse esprimere il dolore che io ho preso; e in mentre che queste mia membra si sosterranno insieme, io possederò una perpetua infelicità, e meritamente perchè sviscerato et ardentissimo amore mi portava giornalmente. È dolto ad ognuno la perdita di tal uomo, quale non è più in podestà della natura, ecc.

It is true that, in April 1476, we find the names of Leonardo and Verrocchio entered in the "Libro degli Uffiziali di notte e de' Monasteri" as breaking the laws; but we immediately after find the note "Absoluti cum condizione ut retamburentur" (Tamburini was the name given to the warrant cases of the night police). The acquittal therefore did not exclude the possibility of a repetition of the charge. It was in fact repeated, two months later, and on this occasion the Master and his pupil were again fully acquitted. Verrocchio was at this time forty and Leonardo four-and-twenty. The documents referring to this affair are in the State Archives of Florence; they have been withheld from publication, but it seemed to me desirable to give the reader this brief account of the leading facts of the story, as the vague hints of it, which have recently been made public, may have given to the incident an aspect which it had not in reality, and which it does not deserve.

The passages here classed under the head "Morals" reveal Leonardo to us as a man whose life and conduct were unfailingly governed by lofty principles and aims. He could scarcely have recorded his stern reprobation and unmeasured contempt for men who do nothing useful and strive only for riches, if his own life and ambitions had been such as they have so often been misrepresented.

At a period like that, when superstition still exercised unlimited dominion over the minds not merely of the illiterate crowd, but of the cultivated and learned classes, it was very natural that Leonardo's views as to Alchemy, Ghosts, Magicians, and the like should be met with stern reprobation whenever and wherever he may have expressed them; this accounts for the argumentative tone of all his utterances on such subjects which I have collected in Subdivision III of this section. To these I have added some passages which throw light on Leonardo's personal views on the Universe. They are, without exception, characterised by a broad spirit of naturalism of which the principles are more strictly applied in his essays on Astronomy, and still more on Physical Geography.

To avoid repetition, only such notes on Philosophy, Morals and Polemics, have been included in this section as occur as independent texts in the original MSS. Several moral reflections have already been given in Vol. I, in section "Allegorical representations, Mottoes and Emblems". Others will be found in the following section. Nos. 9 to 12, Vol. I, are also passages of an argumentative character. It did not seem requisite to repeat here these and similar passages, since their direct connection with the context is far closer in places where they have appeared already, than it would be here.

I.

PHILOSOPHICAL MAXIMS.

The motive power is the cause of all life.

W. XXIX]

1140.

Psychology (1140—1147).
E tu uomo, che consideri in questa 2 mia fatica l'opere mirabili della 3 natura, se giudicherai essere cosa 4 nefanda il distruggerla, or pēsa 5 essere cosa nefandissima il torre la 6 vita all' omo, del quale, se questa 7 sua cōpositione ti pare di marauiglio⁸so artificio, pensa questa essere 9 nulla rispetto all' anima che in 10 tale architettura abita, e vera¹¹mente, quale · essa si sia, ella è 12 cosa diuina, sicchè lascia 13 la abitare nella sua opera a suo be¹⁴neplacito, e nō volere che la tua 15 ira o malignità distrugga 16 una tāta vita, chè ve¹⁷ramēte, chi non la 18 stima, non la 19 merita.

And you, O Man, who will discern in this work of mine the wonderful works of Nature, if you think it would be a criminal thing to destroy it, reflect how much more criminal it is to take the life of a man; and if this, his external form, appears to thee marvellously constructed, remember that it is nothing as compared with the soul that dwells in that structure; for that indeed, be it what it may, is a thing divine. Leave it then to dwell in His work at His good will and pleasure, and let not your rage or malice destroy a life—for indeed, he who does not value it, does not himself deserve it[19].

E. 316]

1190.

Non si debbe desiderare lo impossibile. We ought not to desire the impossible.

H.3 708]

1191.

Dimāda cōsiglio a chi bē si corregge;
 2 Givstitia vuol potētia, intelligētia e
 volontà, e si assomi⁴glia al rè delle api;

5 Chi nō puniscie il male, co⁶māda che
 si facci;

7 Chi piglia la biscia per la coda 8 quella
 poi lo morde;

9 Chi cava la fossa, quella 10 gli ruina
 adosso.

Ask counsel of him who rules himself well.
 Justice requires power, insight, and will;
 and it resembles the queen-bee.

He who does not punish evil commands
 it to be done.

He who takes the snake by the tail will
 presently be bitten by it.

The grave will fall in upon him who
 digs it.

H.3 712]

1192.

1 Chi nō rafrena la uoluttà, colle bestie
 2 s'acōpagni;

3 Nō si può avere maggior nè minor
 signio⁴ria che quella di se medesimo;

5 Chi poco pēsa, molto erra;

6 Più facilmēte si cōtesta al p⁷ncipio,
 7 che al fine;

8 Nessuno cōsiglio è piv leale che 9 quello
 che si da alle navi che so¹⁰no in pericolo;

11 Aspetti danno quel che si regie per 12 gio-
 vane sconigliato.

The man who does not restrain wantonness,
 allies himself with beasts.

You can have no dominion greater or less
 than that over yourself.

He who thinks little, errs much.

It is easier to contend with evil at the
 first than at the last.

No counsel is more loyal than that given
 on ships which are in peril: He may expect
 loss who acts on the advice of an inex-
 perenced youth.

Tr. 39]

1193.

Dov'è piv sentimēto, lì è piv martirio;
 grā martire.

Where there is most feeling, there is the
 greatest martyrdom;—a great martyr.

H.1 168]

1194.

La memoria de' benifitj apres²so l'igra-
 titudine è fragile;

3 Reprēdi l'amico ī segre⁴to, e laudalo
 ī paleso;

5 Non essere bugiardo del 6 preterito.

The memory of benefits is a frail de-
 fence against ingratitude.

Reprove your friend in secret and praise
 him openly.

Be not false about the past.

VOL. II.

PP

C. A. 115^b; 357^b]

1195.

CÔPERATIONE DELLA PATIËTIA.

²La patiëtia fa cōtra alle ingiurie non altramēti che si faccino i panni ³contra del freddo, jnperochè se ti mvltiplicherai li pañi secondo la mvltiplicazione · del freddo ·, esso freddo · nocere nō · potrà ·; simil-mēte alle ⁵grādi ingivrie · cresci la patiëtia, · e esse ingiurie offendere nō ti po⁶tranno la tua mēte.

A SIMILE FOR PATIENCE.

Patience serves us against insults precisely as clothes do against the cold. For if you multiply your garments as the cold increases, that cold cannot hurt you; in the same way increase your patience under great offences, and they cannot hurt your feelings.

S. K. M. II.2 24^a]

1196.

Tanto è a dire bē d'ū tristo, ²quanto a dire male d'ū bono.

To speak well of a base man is much the same as speaking ill of a good man.

H.2 12^b]

1197.

La invidia offēde colla fitta ²infamia, cioè col detrarre, ³la qual cosa spavēta la virtù.

Envy wounds with false accusations, that is with detraction, a thing which scares virtue.

L. 0^a]

1198.

Decipimur votis et tempore fallimur et mos ²deridet curas; anxia vita nihil.

We are deceived by promises and time disappoints us[2] . . .

L. 90^b]

1199.

¶La pavra nascie piv tosto ²che altra cosa. ¶

Fear arises sooner than any thing else.

C. A. 75^b; 219^b]

1200.

Siccome l'animosità è pericolo di uita · così la paura · è securità di quella;

Just as courage imperils life, fear protects it.

²Le minaccie sol sono ³arme dello minacciato;

Threats alone are the weapons of the threatened man.

⁴¶Dov'entra la uētura, la invidia · vi pone lo assedio e lo cōbatte, e dond'ella si parte, vi lascia il dolore e pētīmēto;

Wherever good fortune enters, envy lays siege to the place and attacks it; and when it departs, sorrow and repentance remain behind.

⁵¶Raro cade chi ben camina;

He who walks straight rarely falls.

1195. 2. allengiurie: altremēti . . chessi. 3. fredo jnpero chessetti . . sechondo. 4. esso fredo. 5. grāde . . cresci . . essa ingiuria.

1196. 1. trissto.

1197. 1—3 R. 1. lanvidia . . cholla. 2. chol. 3. spavēte.

1198. 1. et mos. 2. nihil.

1199. 1—2 R. 1. nasscie. 2. chosa.

1200. 1. sichome . . pericholo . . chosi . . sichurita. 3. iminacciato. 4. lanvidia . . essedio ello chōbatte E . . lascia il "dolore he" piētīmēto. 5. chade . . chamina. 6. laldi e pegio . . chosa dicho . . tu nolla. 7. laldi e pegio is tu . . tu nollātēdi.

1198. 2. The rest of this passage may be rendered in various ways, but none of them give a satisfactory meaning.

6 ¶ Mal'è se laudi e peggio se riprēdi la cosa, dico se bene tu non la intēdi;

7 ¶ Mal fai se laudi e peggio se tu riprēdi || la cosa quādo bene tu non la intendi.

It is bad if you praise, and worse if you reprove a thing, I mean, if you do not understand the matter well.

It is ill to praise, and worse to reprimand in matters that you do not understand.

G. 49a]

1201.

Senpre le parole che nō soddisfaño all'orechio dello ¹auditore, li danno tedio over rincrescimēto, e'l segnio di ³ciò vedrai, spesse uolte tali auditori essere ⁴copiosi di sbadigli; addūque tu, che parli dināti a omini ⁵di chi tu ·cierchi benivolētia, quādo tu vedi ·tali pro⁶digi di rīcrescimēto, abreuia il tuo parlare, o tu mu⁷ta ragionamēto, e se tu altramēti farai, allora in lo⁸co della desiderata gratia tu acquisterai odio ⁹e inimicitia;

¹⁰E se vuoi vedere di quel che vn si diletta senza u¹¹dirlo parlare, parla a lui mutādo diuersi ragio¹²namēti, e quel dove tu lo vedi stare intēto senza ¹³sbadigliamēti o storcimēti di ciglia o altre varie ¹⁴azione, sia cierto che quella cosa, di che si parla, ¹⁵è quella di che lui si diletta, ecc.

Words which do not satisfy the ear of the hearer weary him or vex him, and the symptoms of this you will often see in such hearers in their frequent yawns; you therefore, who speak before men whose good will you desire, when you see such an excess of fatigue, abridge your speech, or change your discourse; and if you do otherwise, then instead of the favour you desire, you will get dislike and hostility.

And if you would see in what a man takes pleasure, without hearing him speak, change the subject of your discourse in talking to him, and when you presently see him intent, without yawning or wrinkling his brow or other actions of various kinds, you may be certain that the matter of which you are speaking is such as is agreeable to him &c.

Tr. 11]

1202.

Mvouesi l'amante per la cosa amata come il senso · e lo sensibile, e cō seco s'uniscie ²e fassi vna cosa medesima; ³l'opera è la prima cosa che nasce dall'unione; ⁴se la cosa amata è vile ·, l'amāte si fa vile;

⁵Quando · la cosa vnita è cōueniēte al suo ⁶vnitore ·, li seguita · diletatione · e piacere e soddisfatione;

⁷Quādo l'amāte è giūto all' amato, li si riposa; ⁸quādo · il peso · è posato · li si riposa.

The lover is moved by the beloved object as the senses are by sensible objects; and they unite and become one and the same thing. The work is the first thing born of this union; if the thing loved is base the lover becomes base.

When the thing taken into union is perfectly adapted to that which receives it, the result is delight and pleasure and satisfaction.

When that which loves is united to the thing beloved it can rest there; when the burden is laid down it finds rest there.

C. A. 64 b; 197 b]

1203.

La prima fama si fa eterna insieme colli abitatori ²della città da lui edificata o accresciuta;

There will be eternal fame also for the inhabitants of that town, constructed and enlarged by him. Politics

III.

POLEMICS.—SPECULATION.

G. 47 a]

1205.

O speculatore del²le cose, nō ti laudare
³di conoscere le cose ⁴che ordinariamē⁵te
 per se medesima la ⁶natura ⁷conduce; ⁸Ma
 rallegrati di co⁹noscere il fine ¹⁰di quelle
 cose che ¹¹son disegniate dalla ¹²mēte tua.

Oh! speculators on things, boast not of
 knowing the things that nature ordinarily
 brings about; but rejoice if you know the
 end of those things which you yourself
 devise.

Against
 Speculators
 (1205. 1206).

S. K. M. II.² 67 a]

1206.

O speculatori · dello continvo moto,
 quā²ti vani disegni in simile cerca avete
 creati! ³accōpagniatevi colli cercatori del-
 l'oro.

Oh! speculators on perpetual motion how
 many vain projects of the like character you
 have created! Go and be the companions
 of the searchers for gold.

C. A. 75 δ; 219 δ]

1207.

J bugiardi · interpreti di natura · affermano
 l'argiēto viuo · essere comvne semēza a tutti
 i metalli ·, nō si ricordādo che la ²natura
 varia le semēze · secōdo la diuersità delle
 cose che essa vole produrre al mōdo.

The false interpreters of nature declare
 that quicksilver is the common seed of every
 metal, not remembering that nature varies
 the seed according to the variety of the things
 she desires to produce in the world.

Against
writers of
epitomes.

I abbreviatori delle opere · fanno ingiuria ²alla cognitione e allo amore, ³concosiachè l'amore di qualūche cosa è figliuolo ⁴d'essa cognitione; l'amore ⁵è tanto più feruēte, quanto la ⁶cognitione è più certa, la qual ⁷certezza nasce dalla cognitione ⁸integrals di tutte quelle par⁹ti le quali, essendo insieme vnite, ¹⁰conpongono il tutto di quelle co¹¹se che debbono essere amate; ¹²che vale a quel, che per abbreviare ¹³le parti di quelle cose che lui fa ¹⁴professione di darne integral no¹⁵titia, che lui lascia indietro la ¹⁶maggior parte delle cose, di che il tutto ¹⁷è cōposto? egli è vero che la inpa¹⁸tientia, madre della stoltitia, è que¹⁹lla che lauda la breuità; come se ²⁰questi tali non avessino tāto di uita, ²¹ch'elli seruisse a potere avere vna ²²intera notitia d'un sol particolare co²³me è vn corpo vmano! e poi vogli²⁴ono abbracciare la mēte di dio nella ²⁵quale s'inclode l'universo cara²⁶tando e minuzzando quella in infinite ²⁷parti, come se l'avessino a anatomizzare;

Abbreviators do harm to knowledge and to love, seeing that the love of any thing is the offspring of this knowledge, the love being the more fervent in proportion as the knowledge is more certain. And this certainty is born of a complete knowledge of all the parts, which, when combined, compose the totality of the thing which ought to be loved. Of what use then is he who abridges the details of those matters of which he professes to give thorough information, while he leaves behind the chief part of the things of which the whole is composed? It is true that impatience, the mother of stupidity, praises brevity, as if such persons had not life long enough to serve them to acquire a complete knowledge of one single subject, such as the human body; and then they want to comprehend the mind of God in which the universe is included, weighing it minutely and mincing it into infinite parts, as if they had to dissect it!

²⁸O stoltitia vmana nō ²⁹t'avedi tu che tu sei stato con teco ³⁰tutta la tua età, e non ài ancora ³¹notitia di quella cosa che tu più possie³²di, cioè della tua pazzia? e vuoi po³³ colla moltitudine de' sofistichi ingannare ³⁴te e altri, sprezzando le matematiche sciē³⁵zie, nelle qual si contiene la uerità, no³⁶titia delle cose che in lor si cōtēgono; e vuoi ³⁷poi scorrere ne' miracoli e scrivere ch'ài ³⁸notitia di quelle cose, di che la mēte vmana ³⁹non è capace, e non si possono dimostrare per ne⁴⁰ssuno esemplo naturale, e ti pare avere ⁴¹fatto miraculi,

Oh! human stupidity, do you not perceive that, though you have been with yourself all your life, you are not yet aware of the thing you possess most of, that is of your folly? and then, with the crowd of sophists, you deceive yourselves and others, despising the mathematical sciences, in which truth dwells and the knowledge of the things included in them. And then you occupy yourself with miracles, and write that you possess information of those things of which the human mind is incapable and which cannot be proved by any instance from nature. And you fancy you have wrought miracles when you spoil a work of some

quādo tu ài quastato vna ⁴²opera d'alcuno ingegno speculativo, e nō ⁴³t'avedi che tu cadì nel medesimo errore, ⁴⁴che fa quello che denuda la piāta dell'orna⁴⁵mento de' sua rami, pieni di fronde, miste co⁴⁶li odoriferi fiori o frutti, ⁴⁸come fece Giv⁴⁹stino, abbreviatore delle storie scritte da Trogo ⁵⁰Pōpeo, il quale scrisse ornatamente tutti ⁵¹li eccellēti fatti delli sua antichi, li quali e⁵²rā pieni di mirabilissimi ornamēti; e così ⁵³compose vna cosa ignuda, ma sol degna d'in⁵⁴geggni inpatiēti, li quali pare lor perder ⁵⁵tanto di tempo, quāto quello è che è adoperato vtil⁵⁶mēte, cioè nelli studi delle opere di nature e delle ⁵⁷ cose vmane; Ma stieno questi tali in conpa⁵⁸gnia delle bestie; Nelli lor cortigiani sieno cani e ⁵⁹i altri animali piē di rapina e accompagniansi ⁶⁰con loro correndo sempre dietro , e seguita⁶¹no l' inocēti animali che cō la fame alli tem⁶²pi delle grā nevi ti uengono alle case, dimanda⁶³tori limosina come lor tutore.

speculative mind, and do not perceive that you are falling into the same error as that of a man who strips a tree of the ornament of its branches covered with leaves mingled with the scented blossoms or fruit [48] as Justinus did, in abridging the histories written by Trogus Pompeius, who had written in an ornate style all the worthy deeds of his forefathers, full of the most admirable and ornamental passages; and so composed a bald work worthy only of those impatient spirits, who fancy they are losing as much time as that which they employ usefully in studying the works of nature and the deeds of men. But these may remain in company of beasts; among their associates should be dogs and other animals full of rapine and they may hunt with them after . . . , and then follow helpless beasts, which in time of great snows come near to your houses 'asking' alms as from their master

C. A. 187b; 562d]

1211.

O matematici fate lume a tale er²rore!
³Lo spirito non à voce, perchè dov'è voce ⁴è corpo, e dove è corpo è occupatiō di lo⁵co, il quale impedisce all'ochio il ue⁶dere delle cose poste dopo tale loco; ⁷adunque tal corpo enpie di se tutta ⁸la circostante aria, cioè colle sua s⁹petie.

O mathematicians shed light on this error. On spirits
(1211-1213).
The spirit has no voice, because where there is a voice there is a body, and where there is a body space is occupied, and this prevents the eye from seeing what is placed behind that space; hence the surrounding air is filled by the body, that is by its image.

B. A. 8d]

1212.

Nō può essere voce, dove non è movimēto e percussione d'aria; ²nō può essere percussione d'essa aria, doue non è strumēto; ³nō può essere strumēto incorporeo; essē⁴do così, vno spirito nō può avere nè voce nè forma nè forza, ⁵e se piglierà corpo, non potrà penetrare nè ⁶entrare doue li uscì sono serrati; ⁷e se alcuno dicisse: per aria cōgregata ⁸e ristretta ìsieme lo spirito piglia i corpi ⁹di uarie forme, e

There can be no voice where there is no motion or percussion of the air; there can be no percussion of the air where there is no instrument, there can be no instrument without a body; and this being so, a spirit can have neither voice, nor form, nor strength. And if it were to assume a body it could not penetrate nor enter where the passages are closed. And if any one should say that by air, compressed and compacted

together, a spirit may take bodies of various forms and by this means speak and move with strength—to him I reply that when there are neither nerves nor bones there can be no force exercised in any kind of movement made by such imaginary spirits.

Beware of the teaching of these speculators, because their reasoning is not confirmed by experience.

W. An. II. 2126 (*N*)

1213.

Delli discorsi vmani stoltissimo è da essere riputato quello, il qual s'astēde al²la credulità della negromātia, sorella della alchimia, partoritrice del³le cose senplici e naturali; Ma è tanto più degna di riprensio⁴ne che l'alchimia, quāto ella non partorisce alcuna cosa se nō simile a se, ⁵cioè bugia; il che non interviene nella alchimia, la quale è ministra⁶tricie de'senplici prodotti della natura, il quale vfitio fatto esser nō può ⁷da essa natura, perchè in lei non sono strumēti organici colli quali essa possa operare quel ⁸che adopera l'uomo mediante le mani, che in tale vfitio ⁹à fatti i vetri ecc.; ma essa negromātia, stendardo ovvero bandiera ¹⁰volante, mossa dal uēto, è guidatrice della stolta moltitudine, la quale ¹¹al continuo testimonia collo abbaia¹²mēto d'infiniti effetti di tale ¹²arte; e uāno ēpiuti i libri, affermando che l'incāti e spiriti adoperino ¹³e senza lingua parlino, e senza strumēti organici, sāza i quali ¹⁴parlar nō si può, parlino, e portino gravissimi pesi, facino tēpestare ¹⁵e piovere, e che li omini si cōvertino il gatte, lupi e altre bestie, ¹⁶benchè in bestia prima ētrā quelli che tal cosa affermano;

¹⁷E cierto, se tale negromātia fusse in essere, come dalli bassi ingiegni è creduto, ¹⁸nessuna cosa è sopra la terra che al danno e seruitio dell'omo fusse di tanta valitudine, perchè se fus¹⁹se vero, che in tale arte si avesse potētia di far turbare la trāquilla serenità dell'ari²⁰oa, convertendo quella in notturn aspetto, e far le coruscationi o venti con spa²¹vētevoli toni e folgori scorre²²ti infra le tenebre, e con īpetuosi venti ruinare

Of all human opinions that is to be reputed the most foolish which deals with the belief in Necromancy, the sister of Alchemy, which gives birth to simple and natural things. But it is all the more worthy of reprehension than alchemy, because it brings forth nothing but what is like itself, that is, lies; this does not happen in Alchemy which deals with simple products of nature and whose function cannot be exercised by nature itself, because it has no organic instruments with which it can work, as men do by means of their hands, who have produced, for instance, glass &c. but this Necromancy the flag and flying banner, blown by the winds, is the guide of the stupid crowd which is constantly witness to the dazzling and endless effects of this art; and there are books full, declaring that enchantments and spirits can work and speak without tongues and without organic instruments — without which it is impossible to speak — and can carry heaviest weights and raise storms and rain; and that men can be turned into cats and wolves and other beasts, although indeed it is those who affirm these things who first became beasts.

And surely if this Necromancy did exist, as is believed by small wits, there is nothing on the earth that would be of so much importance alike for the detriment and service of men, if it were true that there were in such an art a power to disturb the calm serenity of the air, converting it into darkness and making coruscations or winds, with terrific thunder and lightnings rushing through the darkness, and with violent

²²li alti edifiti, e diradicare le selue, e con quelle percuotere li eserciti, e quelli ²³ronpēdo e atterrādo, e oltr'a questo le dannose tenpeste, privando li cultori ²⁴del premio delle lor fatiche,—o qual modo di guerra può essere, che con tanto dan²⁵no possa offendere il suo nemico di aver potestà di privarlo delle sue raccolte? qual bat²⁶taglia marittima può essere che si assomigli a quella? dico lui che comāda alli vēti ²⁷e fa le fortune ruvinose e sommergitrici di qual'unche armata,—cierto quel che ²⁸co māda a tali inpetuosi potētie sarā signore delli popoli, e nessuno vma²⁹no ingiegno potrà resistere alle sue dannose forze; Li occulti tesori e ³⁰giemme, riposte nel corpo della terra, fieno a costui tutti manifesti; nessun ³¹serrame o fortezza inespugnabili sarā quelle che saluar possino al³²cuno senza la voglia di tal negromāte; Questo si farā portare per l'aria dal³³l'oriente all'occidēte e per tutti li oppositi aspetti dell'universo; Ma per³⁴chè mi voglio più oltre estendere? quale è quella cosa che per ta³⁵le arteficio far nō si possa? quasi nessuna, eccietto il levarsi la morte; ad³⁶dunque è concluso in parte il danno e la vtilità che in tale arte si contiene, essē³⁷do vera; e s'ella è vera, perchè non è restata infra li omni che tanto la deside³⁸rano, non avēdo riguardo a nessuna deità? e so, che infiniti ce n'è, che per soddisfare ³⁹a vn suo appetito, ruinerebbero Iddio cō tutto l'universo; e s'ella non è rimasto infra ⁴⁰li omni, essendo a lui tanto neciessaria, essa nō fu mai, nè mai è per dovere essere, ⁴¹per la difinitō dello spirito, il quale è invisibile in corpo; e dentro alli elemē⁴²ti non sono cose incorporate, perchè doue non è corpo, è vacuo, e il uacuo nō si da dē⁴³tro alli elemēti, perchè subito sarebbe dall'elemēto riēpiuto; ¶ volta carta.

storms overthrowing high buildings and rooting up forests; and thus to oppose armies, crushing and annihilating them; and, besides these frightful storms may deprive the peasants of the reward of their labours. — Now what kind of warfare is there to hurt the enemy so much as to deprive him of the harvest? What naval warfare could be compared with this? I say, the man who has power to command the winds and to make ruinous gales by which any fleet may be submerged,—surely a man who could command such violent forces would be lord of the nations, and no human ingenuity could resist his crushing force. The hidden treasures and gems reposing in the body of the earth would all be made manifest to him. No lock nor fortress, though impregnable, would be able to save any one against the will of the necromancer. He would have himself carried through the air from East to West and through all the opposite sides of the universe. But why should I enlarge further upon this? What is there that could not be done by such a craftsman? Almost nothing, except to escape death. Hereby I have explained in part the mischief and the usefulness, contained in this art, if it is real; and if it is real why has it not remained among men who desire it so much, having nothing to do with any deity? For I know that there are numberless people who would, to satisfy a whim, destroy God and all the universe; and if this necromancy, being, as it were, so necessary to men, has not been left among them, it can never have existed, nor will it ever exist according to the definition of the spirit, which is invisible in substance; for within the elements there are no incorporate things, because where there is no body, there is a vacuum; and no vacuum can exist in the elements because it would be immediately filled up. Turn over.

medesimo ⁵reggiere nō si può, nè pigliare alcuna sorte di moto locale, ⁶e se tu dirai che per se si regga, questo essere non può ⁷dentro alli elemēti, perchè se lo spirito è quātità incorporea, questa tal quantità è detta vacuo, e il uacuo non si da in natura; e dato che si desse, subito ¹⁰rebbe riempito dalla ruina di quello elemento nel ¹¹qual il uacuo si gienerasse; adunque per la difinition del pe¹²so che dicie, la grauità è vna potētia accidentale creata ¹³d'alcuno elemento tirato o sospinto nell'altro, seguita, che ¹⁴nessuno elemēto, non pesando nel medesimo elemēto, e' pe¹⁵sa nell'elemēto superiore ch'è più lieve di lui; come si uede ¹⁶la parte dell'acqua non à gravità o leuità più che l'altra ¹⁷acqua, ma se tu la tirerai nell'aria, allora ella acqui¹⁸sterà gravezza, e se tu tirerai l'aria ¹⁹sotto l'acqua, allora l'acqua, che si trova sopra tale ²⁰aria, acquista gravezza, la qual gravezza per se sostener ²¹non si può, onde li è necessario la ruina, e così cade infra ²²l'acqua in quel loco ch'è vacuo d'essa acqua; tale ac²³caderebbe nello spirito, stando infra li elemēti, ch'è al ²⁴continuo gienererebbe vacuo in quel tale elemēto, dove ²⁵lui si trovasse, per la qual cosa li sarebbe necessario la con²⁶tinua fuga inverso il cielo, insinche vscito fusse di tali ²⁷elemēti.

SE LO SPIRITO TIENE CORPO INFRA LI ²⁹ELE-
MĒNTI.

³⁰Abbiā provato, come lo spirito non può per se stare infra li ³¹elementi senza corpo, nè per se si può mouere per moto vo³²lontario, se non è allo in sù; Ma al presente diremo co³³me, pigliando corpo d'aria tale spirito, è necies³⁴sario che s'infonda infra essa aria, perchè, s'elli stesse vnito, ³⁵e' sarebbe separato e caderebbe alla gieneratiō del uacuo, ³⁶come di sopra è detto; addunque è necessario che, a volere ³⁷restare infra l'aria, che esso s'infonda in una quātità d'aria; e ³⁸se si mista coll'aria, elli seguita due inconvenienti, cioè ³⁹che elli leuifica quella quātità dell'aria dove esso si mista, e ⁴⁰per la qual cosa l'aria leuificata per se uola in alto,

move of its own accord, nor can it have any kind of motion in space; and if you were to say that it moves itself, this cannot be within the elements. For, if the spirit is an incorporeal quantity, this quantity is called a vacuum, and a vacuum does not exist in nature; and granting that one were formed, it would be immediately filled up by the rushing in of the element in which the vacuum had been generated. Therefore, from the definition of weight, which is this—Gravity is an accidental power, created by one element being drawn to or suspended in another—it follows that an element, not weighing anything compared with itself, has weight in the element above it and lighter than it; as we see that the parts of water have no gravity or levity compared with other water, but if you draw it up into the air, then it would acquire weight, and if you were to draw the air beneath the water then the water which remains above this air would acquire weight, which weight could not sustain itself by itself, whence collapse is inevitable. And this happens in water; wherever the vacuum may be in this water it will fall in; and this would happen with a spirit amid the elements, where it would continuously generate a vacuum in whatever element it might find itself, whence it would be inevitable that it should be constantly flying towards the sky until it had quitted these elements.

AS TO WHETHER A SPIRIT HAS A BODY AMID
THE ELEMENTS.

We have proved that a spirit cannot exist of itself amid the elements without a body, nor can it move of itself by voluntary motion unless it be to rise upwards. But now we will say how such a spirit taking an aerial body would be inevitably melt into air; because if it remained united, it would be separated and fall to form a vacuum, as is said above; therefore it is inevitable, if it is to be able to remain suspended in the air, that it should absorb a certain quantity of air; and if it were mingled with the air, two difficulties arise; that is to say: It must rarefy that portion of the air with which it mingles; and for this cause the rarefied air must fly up of itself and will not

e non resta ⁴¹infra l'aria più grossa di lei; e oltre a questo tal uirtù ⁴²spirituale sparsa si disunisce e altera sua natura, per la qual ⁴³cosa esso m̄ca della prima virtù; aggiugnesi vn ^{3°} incō⁴⁴veniente, e questo è, che tal corpo d'aria, preso dallo spirito, è ⁴⁵sottoposto alla penetratiō de' venti, li quali al continuo disu⁴⁶niscono e stracciano le parti vnite dell'aria, quelle rivolgiē⁴⁷do e raggirando infra l'altra aria; adunque lo spirito, in tale

remain among the air that is heavier than itself; and besides this the subtle spiritual essence disunites itself, and its nature is modified, by which that nature loses some of its first virtue. Added to these there is a third difficulty, and this is that such a body formed of air assumed by the spirits is exposed to the penetrating winds, which are incessantly sundering and dispersing the united portions of the air, revolving and whirling amidst the rest of the atmosphere; therefore the spirit which is infused in this

W. An. II. 201 b (M)]

1215.

aria infuso, sarebbe smēbrato overo sbrannato e ²rotto insieme collo sbrannamēto dell'aria, nella qual s'infuse.

air would be dismembered or rent and broken up with the rending of the air into which it was incorporated.

SE LO SPIRITO, AVÈDO PRESO CORPO ⁴D'ARIA, SI PUÒ PER SE MOVERE O NO.

AS TO WHETHER THE SPIRIT, HAVING TAKEN THIS BODY OF AIR, CAN MOVE OF ITSELF OR NOT.

⁵Impossibile è che lo spirito, infuso a una quantità d'aria, ⁶possa muovere essa aria; e questo si manifesta per la passata dove dice ¶lo spirito leuifica quella quantità dell'aria, ⁸nella quale esso s'infonde; adunque tale aria ⁹si leuerà in alto sopra l'altra aria, e sarà moto fatto dell'a¹⁰ria per la sua leuità e nō per moto volontario dello spirito, e ¹¹se tale aria si scontra nel uēto per la ^{3^a} di questo, essa ¹²aria sarà mossa dal uēto e nō dallo spirito in lei infuso.

It is impossible that the spirit infused into a certain quantity of air, should move this air; and this is proved by the above passage where it is said: the spirit rarefies that portion of the air in which it incorporates itself; therefore this air will rise high above the other air and there will be a motion of the air caused by its lightness and not by a voluntary movement of the spirit, and if this air is encountered by the wind, according to the ^{3rd} of this, the air will be moved by the wind and not by the spirit incorporated in it.

SE LO SPIRITO PUÒ PARLARE O NO.

AS TO WHETHER THE SPIRIT CAN SPEAK OR NOT.

¹⁴Volendo mostrare, se lo spirito può parlare o no, è necies¹⁵sario in prima definire che cosa è uocie, e come si giene¹⁶ra; e diremo in questo modo: la uocie è movimē¹⁷to d'aria confricata in corpo denso, e ¹l' corpo denso ¹⁸confricato nell'aria che è il medesimo, la qual cō¹⁹fricazione di denso con raro condensa il raro e fassi resis²⁰tētia, e ancora il uelocie raro nel tardo raro si condensa²¹no l'uno e l'altro ne' contatti, e fanno suono e grandissimo ²²strepito; è il suono ovvero mormorio fatto dal raro ²³che si move nel raro cō medi-

In order to prove whether the spirit can speak or not, it is necessary in the first place to define what a voice is and how it is generated; and we will say that the voice is, as it were, the movement of air in friction against a dense body, or a dense body in friction against the air,—which is the same thing. And this friction of the dense and the rare condenses the rare and causes resistance; again, the rare, when in swift motion, and the rare in slow motion condense each other when they come in contact and make a noise and very great uproar;

occe movimēto, come ²⁴la grā fiamma gien-
 eratrice di suoni infra l'aria; è 'lgrandissi-
²⁵mo strepito fatto di raro cō raro, e quando
 il uelocie ra²⁶ro penetra in mobile raro,
 come la fiamma del foco vsci²⁷ta dalla bō-
 barda, e percossa infra l'aria, e ancora la
 fiamma ²⁸vscita dal nuvolo percuote l'aria
 nella gienaratō delle saette; ²⁹Addunque
 diremo che lo spirito non possa gienear
 vocie senza ³⁰movimento d'aria, e aria in
 lui non è, nè la può cacciare da se ³¹se elli
 nō l'ā, e se uol muovere quella, nella quale
 lui è infuso, ³²egli è necessario che lo spi-
 rito multiplichi, e multiplicar nō ³³pvò se
 lui non à quātità; e per la 4^a che dicie:
 nessuno raro ³⁴si move se non à loco sta-
 bile, donde lui pigli il movimēto, e ³⁵mas-
 simamēte auendosi a mouere lo elemento
 nello elemēto ³⁶il quale nō si move da se,
 se nō per vaporacione vniforme al ciētro
 della ³⁷cosa vaporata, come accade nella
 spugna ristretta ³⁸in nella mano che sta
 sotto l'acqua, dalla qual l'acqua fuggie per
 qua³⁹lunche verso con equal movimēto per
 le fessure interposte infra ⁴⁰le dita della
 man che dentro a se la strignie;

⁴¹Se lo spirito à vocie articolata, ⁴²e se
 lo spirito può essere audito, ⁴³e che cosa
 è audire e vedere; ⁴⁴l'ōda della vocie va
⁴⁵per l'aria come le spetic delli ⁴⁶obbietti
 vanno all'ochio.

and the sound or murmur made by the rare
 moving through the rare with only mo-
 derate swiftness, like a great flame gene-
 rating noises in the air; and the tremen-
 dous uproar made by the rare mingling
 with the rare, and when that air which is
 both swift and rare rushes into that which is
 itself rare and in motion, it is like the
 flame of fire which issues from a big gun and
 striking against the air; and again when a
 flame issues from the cloud, there is a con-
 cussion in the air as the bolt is generated.
 Therefore we may say that the spirit cannot
 produce a voice without movement of the air,
 and air in it there is none, nor can it emit
 what it has not; and if desires to move
 that air in which it is incorporated, it is
 necessary that the spirit should multiply itself,
 and that cannot multiply which has no quan-
 tity. And in the 4th place it is said that no
 rare body can move, if it has not a stable spot,
 whence it may take its motion; much more
 is it so when an element has to move within
 its own element, which does not move of
 itself, excepting by uniform evaporation at
 the centre of the thing evaporated; as
 occurs in a sponge squeezed in the hand
 held under water; the water escapes in every
 direction with equal movement through the
 openings between the fingers of the hand in
 which it is squeezed.

As to whether the spirit has an articulate
 voice, and whether the spirit can be heard,
 and what hearing is, and seeing; the wave
 of the voice passes through the air as the
 images of objects pass to the eye.

its essence, as regards time, lies precisely
 between the past and the future, and has
 nothing in the present. This nothingness
 has the part equal to the whole, and the
 whole to the part, the divisible to the in-
 divisible; and the product of the sum is the
 same whether we divide or multiply, and in
 addition as in subtraction; as is proved by
 arithmeticians by their tenth figure which
 represents zero; and its power has not exten-
 sion among the things of Nature.]

[What is called Nothingness is to be
 found only in time and in speech. In time
 it stands between the past and future and
 has no existence in the present; and thus in
 speech it is one of the things of which we
 say: They are not, or they are impossible.]

With regard to time, nothingness lies
 between the past and the future, and has
 nothing to do with the present, and as to its
 nature it is to be classed among things impos-
 sible: hence, from what has been said, it has
 no existence; because where there is nothing
 there would necessarily be a vacuum.

Br. M. 156a]

1217.

ESEMPIO DELLA SAETTA FRA NUVOLI.

²[O potente e già animato strumento
 dell'artificiosa natura, ³a te nō valēdo le
 tue grā forze ti cōiueni abbādonare la
 trāquilla vita e obbedire alla legie, ⁴che Iddio
 e 'l tēpo diede alla gienitrice natura.]

⁷O quāte volte furono vedute le ipav-
 rite schiere ⁸de' delfini e de' grā tonni fu-
 gire dal inpia tua furia, ⁹e tu, che...
¹⁰fulminando gienierasti nel mare subita tē-
 pesta con grā busse e sommersione di navili
 cō grā¹¹de òdamēto, ēpiēdo gli scoperti liti
 degli ipavriti e sbigo¹²ttiti pesci, togliē-
 dosi a te per lasciato mare rimasi in loco
 divenivano soperchia e ¹³abbondante preda
 de' vicini popoli;

EXAMPLE OF THE LIGHTNING IN CLOUDS.

[O mighty and once living instrument of
 formative nature. Incapable of availing thy-
 self of thy vast strength thou hast to abandon
 a life of stillness and to obey the law which
 God and time gave to procreative nature.]

Ah! how many a time the shoals of terri-
 fied dolphins and the huge tunny-fish were
 seen to flee before thy cruel fury, to escape;
 whilst thy fulminations raised in the sea a
 sudden tempest with buffeting and submer-
 sion of ships in the great waves; and filling the
 uncovered shores with the terrified and desperate
 fishes which fled from thee, and left by the sea,
 remained in spots where they became the abun-
 dant prey of the people in the neighbourhood.

1217—1219. The character of the handwriting
 points to an early period of Leonardo's life. It has

become very indistinct, and is at present exceedingly
 difficult to decipher. Some passages remain doubtful.

¹⁴O tēpo, veloce predatore ¹⁵delle create cose, quāti rē, quāti popoli ài tu disfatti, e quā¹⁶te mutazioni di stati e vari casi sono seguite dopo che la mara¹⁷vigliosa forma di questo pescie qui morì ¹⁸per le caverne e ritorte interiora; ¹⁹ora disfatto dal tēpo patiēte giacci i questo chiuso loco; colle spolpate e ignivde ossa ²⁰ài fatto armadura e sostegno al sopra posto mōte.

O time, swift robber of all created things, how many kings, how many nations hast thou undone, and how many changes of states and of various events have happened since the wondrous forms of this fish perished here in this cavernous and winding recess. Now destroyed by time thou liest patiently in this confined space with bones stripped and bare; serving as a support and prop for the superimposed mountain.

Br. M. 155 b]

1218.

Rimase lo elemēto dell'acqua rīchiuso īfra li crescivti argini de' fiumi, e si vede 'l mare ²īfra la crescivta terra ³e la circondatricie aria, avēdo a fasciare e circondare la moltiplicata machina della terra, e la sua ⁵grossezza, che staua fra l'acqua e lo elemēto del fuoco, ⁶rimāga molto ristretta e privata dalla bisognosa acqua; i fivmi ⁷rimarrāno senza le loro acque, la fertile terra nō māderà piv leggieri ⁸frōde, nō fieno piv i cāpi adornití dalle ricascāti piāte; tutti ⁹li animali nō trovādo da pasciare le fresche erbe, morranno, e mā¹⁰cherà il cibo ai rapaci lioni e lupi e altri animali che vivono ¹¹di ratto, e agli omini dopo molti ripari cōverrà abādonare ¹²la loro vita, e mācherà la gienerazione vmana; a questo modo la fertile e fruttuosa terra ¹³abandonata rimarrà arida e sterile e per richivso omo¹⁴re della acqua, richivsa nel suo ventre, e per la vivace natura osserverà ¹⁵alquāto dello suo accrescimēto, tāto che passata la fredda e so¹⁶ttile aria fia costretta a terminare collo elemēto del fuoco; ¹⁷allora la sua superfice rimarrà in riansa cienere, e questo fia il termine ¹⁸della terrestre natura.

The watery element was left enclosed between the raised banks of the rivers, and the sea was seen between the uplifted earth and the surrounding air which has to envelope and enclose the complicated machine of the earth, and whose mass, standing between the water and the element of fire, remained much restricted and deprived of its indispensable moisture; the rivers will be deprived of their waters, the fruitful earth will put forth no more her light verdure; the fields will no more be decked with waving corn; all the animals, finding no fresh grass for pasture, will die and food will then be lacking to the lions and wolves and other beasts of prey, and to men who after many efforts will be compelled to abandon their life, and the human race will die out. In this way the fertile and fruitful earth will remain deserted, arid and sterile from the water being shut up in its interior, and from the activity of nature it will continue a little time to increase until the cold and subtle air being gone, it will be forced to end with the element of fire; and then its surface will be left burnt up to cinder and this will be the end of all terrestrial nature.

Br. M. 156 b]

1219.

Perchè la natura non ordinò che l'uno animale nō uivesse ²dalla morte dell'altro? ³la natura, essēdo vaga e pigliādo piacere

XX.

Humorous Writings.

Just as Michaelangelo's occasional poems reflect his private life as well as the general disposition of his mind, we may find in the writings collected in this section, the transcript of Leonardo's fanciful nature, and we should probably not be far wrong in assuming, that he himself had recited these fables in the company of his friends or at the court festivals of princes and patrons. Era tanto piacevole nella conversazione — so relates Vasari — che tirava a sè gli animi delle genti. And Paulus Jovius says in his short biography of the artist: Fuit ingenio valde comi, nitido, liberali, vultu autem longe venustissimo, et cum elegantiae omnis deliciarumque maxime theatralium mirificus inventor ac arbiter esset, ad lyramque scito caneret, cunctis per omnem aetatem principibus mire placuit. There can be no doubt that the fables are the original offspring of Leonardo's brain, and not borrowed from any foreign source; indeed the schemes and plans for the composition of fables collected in division V seem to afford an external proof of this, if the fables themselves did not render it self-evident. Several of them—for instance No. 1279—are so strikingly characteristic of Leonardo's views of natural science that we cannot do them justice till we are acquainted with his theories on such subjects; and this is equally true of the 'Prophecies'.

I have prefixed to these quaint writings the 'Studies on the life and habits of animals' which are singular from their peculiar aphoristic style, and I have transcribed them in exactly the order in which they are written in MS. H. This is one of the very rare instances in which one subject is treated in a consecutive series of notes, all in one MS., and Leonardo has also departed from his ordinary habits, by occasionally not completing the text on the page it is begun. These brief notes of a somewhat mysterious bearing have been placed here, simply because they may possibly have been intended to serve as hints for fables or allegories. They can scarcely be regarded as preparatory for a natural history; rather they would seem to be extracts. On the one hand the names

of some of the animals seem to prove that Leonardo could not here be recording observations of his own; on the other hand the notes on their habits and life appear to me to dwell precisely on what must have interested him most—so far as it is possible to form any complete estimate of his nature and tastes.

In No. 1293 lines 1—10, we have a sketch of a scheme for grouping the Prophecies. I have not however availed myself of it as a clue to their arrangement here because, in the first place, the texts are not so numerous as to render the suggested classification useful to the reader, and, also, because in reading the long series, as they occur in the original, we may follow the author's mind; and here and there it is not difficult to see how one theme suggested another. I have however regarded Leonardo's scheme for the classification of the Prophecies as available for that of the Fables and Fests, and have adhered to it as far as possible.

Among the humorous writings I might perhaps have included the 'Rebusses', of which there are several in the collection of Leonardo's drawings at Windsor; it seems to me not likely that many or all of them could be solved at the present day and the MSS. throw no light on them. Nor should I be justified if I intended to include in the literary works the well-known caricatures of human faces attributed to Leonardo—of which, however, it may be incidentally observed, the greater number are in my opinion undoubtedly spurious. Two only have necessarily been given owing to their presence in text, which it was desired to reproduce: Vol. I page 326, and Pl. CXXII. It can scarcely be doubted that some satirical intention is conveyed by the drawing on Pl. LXIV (text No. 688).

My reason for not presenting Leonardo to the reader as a poet is the fact that the maxims and morals in verse which have been ascribed to him, are not to be found in the manuscripts, and Prof. Uzielli has already proved that they cannot be by him. Hence it would seem that only a few short verses can be attributed to him with any certainty.

I.

STUDIES ON THE LIFE AND HABITS OF ANIMALS.

THE LOVE OF VIRTUE.

The gold-finch is a bird of which it is related that, when it is carried into the presence of a sick person, if the sick man is going to die, the bird turns away its head and never looks at him; but if the sick man is to be saved the bird never loses sight of him but is the cause of curing him of all his sickness.

Like unto this is the love of virtue. It never looks at any vile or base thing, but rather clings always to pure and virtuous things and takes up its abode in a noble heart; as the birds do in green woods on flowery branches. And this Love shows itself more in adversity than in prosperity; as light does, which shines most where the place is darkest.

H. I. 5b]

1221.

INVIDIA.

²Del nibbio · si leggie ·, che quādo esso
 uede ³i sua figlioli nel nido esser di troppa
 gra⁴ssezza, che per invidia egli becca loro
 le coste e tiē⁵gli senza māgiare.

ENVY.

We read of the kite that, when it sees its young ones growing too big in the nest, out of envy it pecks their sides, and keeps them without food.

1220. 2. callendrino e uno. 4. chessel. 5. quessto. 6. esse. 7. isschanpare quessto. 9. chausa . . hogni. 11. trissta. 12. hones-
 ste he. 13. ripatria [senpre] in . . assi. 15. essi . . prossperi. 17. comelume . . rissplēde.

1221. 2. nibio si legie. 4. ssezza che "per inuidia" egli gli beccha . . cosste ettiē. 6. allegreza. 7. lalegreza e apropiata.

ALLEGREZZA.

⁷L'allegrezza · è appropriata · al gallo · che ⁸d'ogni piccola · cosa · si rallegra e cā-
ta · con vari e scherzāti mouimēti.

TRISTEZZA.

¹¹La tristezza · s'assomiglia al corbo, il quale, ¹²quādo uede i sua nati figlioli esser biā¹³chi, che per lo grāde dolore si parte cō tristo ¹⁴rammarichio, gl'abādonga e nō gli pascie · ¹⁵isino che non gli vede alquāte poche pēne ¹⁶nere.

CHEERFULNESS.

Cheerfulness is proper to the cock, which rejoices over every little thing, and crows with varied and lively movements.

SADNESS.

Sadness resembles the raven, which, when it sees its young ones born white, departs in great grief, and abandons them with doleful lamentations, and does not feed them until it sees in them some few black feathers.

H. 1 6a]

1222.

PACE.

²Del castoro si legge che, quādo è perse³guitato ·, cōnoscīdo · essere · per la virtù ⁴de' sua medicinali · testicoli, esso nō po⁵tēdo piv fuggire, si ferma, e per auere ⁶pace coi cacciatori coi sua tagliēti ⁷dēti si spicca i testicoli e li lascia a sua ⁸nimici.

IRA.

¹⁰Dell'orso si dice che · quādo va alle case ¹¹delle api per torre loro il mele, esse ¹²api cōminciando a pūgierlo, che lui lasci¹³a il mele e corre alla vendetta, e volē-¹⁴dosi cō tutte quelle che lo mordono vē-¹⁵dicare, cō nessuna si uēdica, in modo che la ¹⁶sua ira si cōuerte in rabbia, e gittatosi ¹⁷in terra colle mani e coi piedi inasprādo ¹⁸indarno da quelle si difende.

PEACE.

We read of the beaver that when it is pursued, knowing that it is for the virtue [contained] in its medicinal testicles and not being able to escape, it stops; and to be at peace with its pursuers, it bites off its testicles with its sharp teeth, and leaves them to its enemies.

RAGE.

It is said of the bear that when it goes to the haunts of bees to take their honey, the bees having begun to sting him he leaves the honey and rushes to revenge himself. And as he seeks to be revenged on all those that sting him, he is revenged on none; in such wise that his rage is turned to madness, and he flings himself on the ground, vainly exasperating, by his hands and feet, the foes against which he is defending himself.

H. 1 6b]

1223.

GRATITUDINE.

²La virtù · della gratitudine si dice ³essere piv nelli uccielli detti upupa, ⁴i quali, cōnoscīdo il beneficio della ⁵ricevuta vita e nvtrimēto dal pa⁶dre e dalla loro madre, quādo li uedo⁷no vechi fanno loro vno nido e li ⁸covano e li nutriscono, e cavā loro ⁹col becco le vechie e triste penne, e ¹⁰cō certe erbe li rēdano la uista, ¹¹in modo che ritornano in prospertà.

GRATITUDE.

The virtue of gratitude is said to be more [developed] in the birds called hoopoes which, knowing the benefits of life and food, they have received from their father and their mother, when they see them grow old, make a nest for them and brood over them and feed them, and with their beaks pull out their old and shabby feathers; and then, with a certain herb restore their sight so that they return to a prosperous state.

8. pichola chosa . . echā. 9. cōiari esscerzati. 10. tristezza. 11. tristezza sasomiglia al corb. 14. ramarichio. 15. nogli . . poce.

1222. 2. he. 3. cōnoscīdo. 5. fuggire. 7. sisspicha . . elli lascia assua. 11. ave. 12. ave lo cōmiciato a pūgiere o di lui lasci. 13. core. 14. chello mordano. 15. imodo chella. 17. tero chojle mani eco . . inaspādo. 18. dacquelle.

1223. 1. [misericordia] over graditudine. 3. detti upica. 4. cōnoscīdo . . nvtrimēdo. 6. ueda. 7. fano . . elli. 8. elli notriscano. 9. becho . . triste. 10. chō . . rēdano. 11. imodo. 13. rosso si pascie . . essenpre.

AVARITIA.

¹³Il rospo si pascie di terra e senpre
¹⁴sta macro, perchè nō si satia; tant'è ¹⁵il
timore che essa terra nō li manchi.

H. I 7 a]

1224.

AVARICE.

The toad feeds on earth and always
remains lean; because it never eats enough:—
it is so afraid lest it should want for earth.

INGRATITUDE.

²I colonbi sono assimigliati alla ³ingra-
titudine, inperchè quādo ⁴sono in età che
non abbino piv biso⁵gnio d'essere cibati,
cominciano a ⁶cōbattere col padre; e nō
finisce ⁷essa pugnìa insino a tātō che
⁸caccia il padre e toglì la moglie ⁹facien-
dose la sua.

CRUELTA'.

¹¹Il basilisco . è di tanta crudeltà che,
¹²quādo colla sua venenosa vista nō può
¹³occidere li animali, si volta all'erbe ¹⁴e
le piāte, e fermādo in quelle la sua ¹⁵vista
le fa seccare.

H. I 7 b]

1225.

INGRATITUDE.

Pigeons are a symbol of ingratitude; for
when they are old enough no longer to need
to be fed, they begin to fight with their
father, and this struggle does not end until
the young one drives the father out and takes
the hen and makes her his own.

CRUELTY.

The basilisk is so utterly cruel that when
it cannot kill animals by its baleful gaze, it
turns upon herbs and plants, and fixing its
gaze on them withers them up.

LIBERALIT'.

²Dell'aquila si dice che non à mai si
grā ³fame ., che non lasci parte della sua
⁴preda . a quelli vcciegli che gli son ⁵din-
torno ., i quali, nō potēdosi per se ⁶pasciere,
è necessariò che sieno cor'teggiatori d'essa
aquila, perchè in tal ⁸modo si cibano.

CORETTIONE.

¹⁰Quādo il lupo . va asentito intorno
¹¹a qualche stallo di bestiame, e che per
caso ¹²esso pōga il piede in fallo in modo
facci ¹³strepito, egli si morde il piè per
correg¹⁴giere se da tale errore.

H. I 8 a]

1226.

LUSINGHE OVER SIRENE.

²La sirena si dolcemēte cāta ³che adormēta
i marinari, e essa ⁴mōta sopra i na-
vili e occide li a⁵dormētati marinari.

GENEROSITY.

It is said of the eagle that it is never
so hungry but that it will leave a part of
its prey for the birds that are round it, which,
being unable to provide their own food, are
necessarily dependent on the eagle, since it
is thus that they obtain food.

DISCIPLINE.

When the wolf goes cunningly round some
stable of cattle, and by accident puts his
foot in a trap, so that he makes a noise, he
bites his foot off to punish himself for his
folly.

FLATTERERS OR SYRENS.

The syren sings so sweetly that she lulls
the mariners to sleep; then she climbs upon
the ships and kills the sleeping mariners.

⁷La formica per naturale cōsiglio ⁸pro-
vede la state per lo uerno, uccidēdo le
racolte semēze, perchè nō ri¹⁰nascino, e di
quelle al tempo si pascono.

PAZZIA.

¹²Il bo saluatico avēdo in odio il co-
¹³lore rosso, i cacciatori vestono di rosso
¹⁴il pedal d'una piāta, e esso bo corre a
¹⁵quella e cō gran furia v'inchioda le corti-
¹⁶ne, òde i cacciatori l'uccidono.

PRUDENCE.

The ant, by her natural foresight pro-
vides in the summer for the winter, killing
the seeds she harvests that they may not ger-
minate, and on them, in due time she feeds.

FOLLY.

The wild bull having a horror of a red
colour, the hunters dress up the trunk of a
tree with red and the bull runs at this with
great frenzy, thus fixing his horns, and forth-
with the hunters kill him there.

H. 1 8d]

1227.

GIUSTITIA.

²E' si può assimigliare la uirtù della
giustitia allo rè delle api, il quale ordina
⁴e dispone ogni cosa cō ragione, impero-
chè alcune api sono ordinate andāre per
fiori, altre ordinate a lavora⁷re, altre a cō-
battere colle vespe, ⁸altre a leuare le spor-
cicie, altre ⁹a accōpagniare e corteggiare il
loro rè; e quā¹⁰do è vecchio e sāza ali, esse
lo portano, ¹¹e se ui vna māca di suo ofi-
tio, sāza ¹²alcuna remissione è punita.

VERITÀ.

¹⁴Benchè le pernici rubino l'oua l'una
all'al¹⁵tra, nōdimeno i figlioli nati d'esse
ova ¹⁶senpre ritornano alla lor uera madre.

JUSTICE.

We may liken the virtue of Justice to
the king of the bees which orders and
arranges every thing with judgment. For
some bees are ordered to go to the flowers,
others are ordered to labour, others to fight
with the wasps, others to clear away all dirt,
others to accompany and escort the king;
and when he is old and has no wings they
carry him. And if one of them fails in his
duty, he is punished without reprieve.

TRUTH.

Although partridges steal each other's eggs,
nevertheless the young born of these eggs
always return to their true mother.

H. 1 9a]

1228.

FEDELITÀ OVER LEALTÀ.

²Le grù son tanto fedeli e leali al loro
rè ³che la notte, quādo lui dorme, alcune
vā⁴no dintorno al prato per guardare da
lū⁵ga; altre ne stanno dapresso e tengono
⁶vno sasso ciascuna in piè, che se 'l son⁷no
le uincesse, essa pietra caderebbe e fa⁸rebbe
tal romore, ch'essi ridesterebbero; e ⁹altre
vi sono che insieme intorno al rè dor¹⁰mono,
e ciò fanno ogni notte scābiādosi, ¹¹acciò
chè loro rè nō uogliono mācare.

FIDELITY, OR LOYALTY.

The cranes are so faithful and loyal to
their king, that at night, when he is sleeping,
some of them go round the field to keep
watch at a distance; others remain near,
each holding a stone in his foot, so that if
sleep should overcome them, this stone
would fall and make so much noise that
they would wake up again. And there are
others which sleep together round the king;
and this they do every night, changing in
turn so that their king may never find them
wanting.

16. i cacciatori loccidano.

1227. 2. delagusti. 3. ave. 4. chosa . . ipero. 5. alchuna ave. 6. allauora. 7. chōbottere cholle vessepe. 8. spurcicie. 9. acō-
pagnare e cortegiare loree. 10. essāza. 11. esse . . mācha. 14. benchelle.1228. 1. lialta. 2. allorere. 3. chella. 5. ettengano. 6. sasso [per] ciascuna . . chesselso. 7. vinciessi . . chaderebe effa. 8. rebe
. . ridesterebono. 9. chensieme . . are. 10. mano . . fano. 11. acio cholorore nō uē gli a māchare. 13. torma dissga.

FALSITÀ.

¹³La uolpe quādo vede alcuna torma di sgar¹⁴ze o taccole o simili uccielli, subito si gitta in ter¹⁵ra in modo colla bocca aperta che par morta, ¹⁶e essi uccielli le uogliono beccare la lingua, e essa ¹⁷gli piglia la testa.

FALSEHOOD.

The fox when it sees a flock of herons or magpies or birds of that kind, suddenly flings himself on the ground with his mouth open to look as he were dead; and these birds want to peck at his tongue, and he bites off their heads.

H. 1 9 δ]

1229.

BUGIA.

²La talpa · à li occhi molto · piccoli ·, e senpre ³sta · sotto · terra · e tanto · viue ·, quanto essa ⁴sta occulta ·, e come · viene alla luce ⁵subito · more · perchè si fa nota; così la bugia.

LIES.

The mole has very small eyes and it always lives under ground; and it lives as long as it is in the dark but when it comes into the light it dies immediately, because it becomes known;—and so it is with lies.

FORTEZZA.

⁷Il liono · mai · teme ·, anzi · cō forte animo ⁸pugna cō fiera battaglia contra la mol-⁹itudine de' cacciatori ·, senpre cercādo ¹⁰offendere · il primo · che l'offese.

VALOUR.

The lion is never afraid, but rather fights with a bold spirit and savage onslaught against a multitude of hunters, always seeking to injure the first that injures him.

TIMORE OVER ULTÀ.

¹²La lepore senpre teme ·, e le foglie che ca¹³dono dalle piāte · per autunno senpre la tē¹⁴gono in timore, e 'l piv delle volte in fuga.

FEAR OR COWARDICE.

The hare is always frightened; and the leaves that fall from the trees in autumn always keep him in terror and generally put him to flight.

H. 1 10 α]

1230.

MAGNIANIMITÀ.

²Il falcone nō preda · mai ·, se non ucelli ³grossi ·, e prima si lascierebbe morire che ⁴si cibasse de' piccoli, o che mangiasse car⁵ne fetida.

MAGNANIMITY.

The falcon never preys but on large birds; and it will let itself die rather than feed on little ones, or eat stinking meat.

VANA GLORIA.

⁷In questo vitio si legge del pavone es-^{scr}li più che altro animale sottoposto, ⁹perchè senpre contempla in nella bellezza ¹⁰della sua coda, quella allargādo in for¹¹ma di rota e col suo grido trae a se ¹²la uista de' circustāti animali;

VAIN GLORY.

As regards this vice, we read that the peacock is more guilty of it than any other animal. For it is always contemplating the beauty of its tail, which it spreads in the form of a wheel, and by its cries attracts to itself the gaze of the creatures that surround it.

¹³E questo · è l'ultimo vitio che si possa ¹⁴vinciare.

And this is the last vice to be conquered.

H. 1 10 d]

1231.

CONSTANTIA.

²Alla constantia · s'assimiglia · la fenice,
³la quale intēdēdo per natura la sua re-
⁴novatione ·, è costante a sostenere le cuo-
centi ⁵fiamme · le quali la cōsumano, e poi
⁶di novo rinascie.

INCŌSTANTIA.

⁸Il rondone si mette per la incostantia,
⁹il quale senpre sta in moto · per nō sop-
porta¹⁰re alcuno minimo disagio.

TĒPERĀZA.

¹²Il camello è il piv · lussurioso animale
¹³che sia, e andrebbe mille miglia dirieto a
vna ¹⁴camella ·, e se vsasse cōtinvo cō la
madre o so¹⁵relle, mai le tocca; tāto si sa
bē tēperare.

H. 1 11 a]

1232.

INTĒPERANZA.

²Il liocorno overo vnicorno · per la sua
intē³perāza e nō sapersi uiciere per lo di-
letto che à ⁴delle donzelle · dimētica la sua
ferocità ⁵e saluatichezza; ponēdo da cāto
ogni sospetto ⁶va alla sedente donzella e
se le adormē⁷ta · in grēbo ·, e i cacciatori
in tal modo ⁸lo pigliano.

VMILITÀ.

¹⁰Dell'umilità si uede somma speriētia
nello ¹¹agnello, il quale si sottomette a
ogni ani¹²male; e quādo per cibo son dati
ai incarcerati ¹³leoni ·, a quelli si sottomet-
tono come alla ¹⁴propria madre, in modo
che spesse volte ¹⁵si è visto i lioni non li
volere occidere.

H. 1 11 b]

1233.

SUPERBIA.

²Il falcone per la sua alterigia e super-
bia ³vole signioreggiare · e soprafare tutti
li al⁴tri vccielli · che sono di rapina, e sempre
⁵desidera · essere solo, e spesse volte si è
⁶veduto il falcone assaltare l'aquila, ⁷regina
delli vccielli.

CONSTANCY.

Constancy may be symbolised by the
phoenix which, knowing that by nature it
must be resuscitated, has the constancy to
endure the burning flames which consume it,
and then it rises anew.

INCONSTANCY.

The swallow may serve for Inconstancy,
for it is always in movement, since it cannot
endure the smallest discomfort.

CONTINENCE.

The camel is the most lustful animal
there is, and will follow the female for a
thousand miles. But if you keep it con-
stantly with its mother or sister it will leave
them alone, so temperate is its nature.

INCONTINENCE.

The unicorn, through its intemperance
and not knowing how to control itself, for
the love it bears to fair maidens forgets its
ferocity and wildness; and laying aside all
fear it will go up to a seated damsel and
go to sleep in her lap, and thus the hunters
take it.

HUMILITY.

We see the most striking example of
humility in the lamb which will submit to
any animal; and when they are given for
food to imprisoned lions they are as gentle
to them as to their own mother, so that very
often it has been seen that the lions forbear
to kill them.

PRIDE.

The falcon, by reason of its haughtiness
and pride, is fain to lord it and rule over all
the other birds of prey, and longs to be
sole and supreme; and very often the falcon
has been seen to assault the eagle, the Queen
of birds.

1231. 2. sasomiglia. 3. intēdedo. 4. sostiene lecoce 5. ti fiamme. 6. ti fiamme rinascie. 8. incostantia. 9. imoto . . soporta.

ASTINENTIA.

⁹Il saluatico · asino · quādo · va alla ¹⁰fonte · per bere · e trova · l'acqua intor¹¹bidata, non avrà mai si grā sete, che nō ¹²s'astēga di bere, e aspetti ch'essa acqua ¹³si richiari.

GOLA.

¹⁵Il vulture · è tanto sottoposto alla gola ¹⁶che andrebbe mille miglia per māgiare ¹⁷d'una carogna, e per questo seguita li eserciti.

H. I 122]

1234.

CASTITÀ.

²La tortora nō fa mai fallo al suo cōpagnio, ³e se l'uno more, l'altro osserua perpetua ca⁴stità e non si posa mai su ramo verde e nō ⁵beue mai acqua chiara.

LUSSURIA.

⁷Il pipistrello per la sua sfrenata lussu⁸ria non osserua alcuno vniversale mo⁹do di lussuria, anzi maschio cō maschio, ¹⁰femina cō femina, siccome a caso si tro¹¹vano insieme, vsano il lor coito.

MODERANZA.

¹³L'ermellino per la sua moderātia nō māgia ¹⁴se non vna sola volta il dì, e prima si lascia pi¹⁵gliare dai cacciatori che volere fugire ¹⁶nella infangata tana, ¹⁷per nō maculare la sua giētilezza.

H. I 123]

1235.

AQUILA.

²L'aquila, quādo è vecchia, vola tāto ³in alto, che abbrucia le sue penne, e na⁴tura cōsente che si rinoui in giovētù, ⁵cadendo nella poca acqua;

⁶È se i sua nati nō possono tenere la uista ⁷nel sole—; nō li pascie di nessuno uccello, ⁸che nō uole morire; non s'accostano

ABSTINENCE.

The wild ass, when it goes to the well to drink, and finds the water troubled, is never so thirsty but that it will abstain from drinking, and wait till the water is clear again.

GLUTTONY.

The vulture is so addicted to gluttony that it will go a thousand miles to eat a carrion [carcase]; therefore is it that it follows armies.

CHASTITY.

The turtle-dove is never false to its mate; and if one dies the other preserves perpetual chastity, and never again sits on a green bough, nor ever again drinks of clear water.

UNCHASTITY.

The bat, owing to unbridled lust, observes no universal rule in pairing, but males with males and females with females pair promiscuously, as it may happen.

MODERATION.

The ermine out of moderation never eats but once in the day; it will rather let itself be taken by the hunters than take refuge in a dirty lair, in order not to stain its purity.

THE EAGLE.

The eagle when it is old flies so high that it scorches its feathers, and Nature allowing that it should renew its youth, it falls into shallow water [5]. And if its young ones cannot bear to gaze on the sun [6]—; it does not feed them with any bird, that does not wish to die. Animals which much fear

VOL. II.

SS

al suo ⁹nido gli animali che forte la tema¹⁰no, ma essa a lor nō noce, senpre ¹¹lascia rimanēte della sua preda.

it do not approach its nest, although it does not hurt them. It always leaves part of its prey uneaten.

LUMERPA,—FAMA.

LUMERPA,—FAME.

¹³Questa nascie nell'Asia Maggiore, e splē¹⁴de si forte che toglie le sue òbre, e morendo ¹⁵nō perde esso lume, e mai li cadono giù le ¹⁶penne, e la penna che si spicca piv nō ¹⁷luce.

This is found in Asia Major, and shines so brightly that it absorbs its own shadow, and when it dies it does not lose this light, and its feathers never fall out, but a feather pulled out shines no longer.

H. I 13a]

1236.

PELICANO.

THE PELICAN.

²Questo porta grāde amore a sua nati, ³e trouādo quelli nel nido morti dal ⁴serpēte, si pūgie a riscōtro al core e, col ⁵suo piovente sangue bagniadoli, li tor⁶na in vita.

This bird has a great love for its young; and when it finds them in its nest dead from a serpent's bite, it pierces itself to the heart, and with its blood it bathes them till they return to life.

SALAMĀDRA.

THE SALAMANDER.

⁸Questo non à mēbra passive, e nō si ⁹cura d'altro cibo che di foco, e spesso in ¹⁰quello rinova la sua scorza.

This has no digestive organs, and gets no food but from the fire, in which it constantly renews its scaly skin.

¹¹La salamādra nel foco ¹²rinova la sua scorza; — ¹³per la ¹⁴vir¹⁵tù.

The salamander, which renews its scaly skin in the fire,—for virtue.

CAMELEO.

THE CAMELEON.

¹⁶Questo viue d'aria, e ī quella sta su ¹⁷bietto a tutti li uccielli, e per stare piv ¹⁸saluo vola sopra le nvvole; e truova ¹⁹aria tāto sottile, che nō può sostenere ²⁰vcciello che lo seguiti.

This lives on air, and there it is the prey of all the birds; so in order to be safer it flies above the clouds and finds an air so rarefied that it cannot support the bird that follows it.

²¹A questa altezza nō va, se nō a chi da cieli ²²è dato, cioè dove vola il cameleone.

At that height nothing can go unless it has a gift from Heaven, and that is where the chameleon flies.

H. I 13b]

1237.

ALEPO PESCIÉ.

THE ALEPO, A FISH.

²Alepo nō uive fori dell'acqua.

The fish *alepo* does not live out of water.

STRUZZO.

THE OSTRICH.

⁴Questo cōuerte il ferro in suo ⁵nutrimēto; cova l'uova colla vista; ⁶¶per l'arme ⁷de' capitani.¶

This bird converts iron into nourishment, and hatches its eggs by its gaze;—Armies under commanders.

nossacosti. 9. chefforte la tena. 11. lascia. 12. P. fama; — lumerpa fama (?). 13. nascie . . maggiore essplē. 14. chet-toglie. 15. li cade piv le. 16. ella pena chessi spicha.

1237. 1. alep[o] pescic. [4. suo "nutrimēto". 5. cova lava. Lines 6 and 7 are written on the margin near the title-line.

CIGNO.

⁹Cignio è candido senza alcuna ¹⁰macchia, e dolcemēte canta nel mo¹¹rire, il qual cāto terminā·la uita.

THE SWAN.

The swan is white without any spot, and it sings sweetly as it dies, its life ending with that song.

CICOGNIA.

¹³Questa, beuēdo la salsa acqua, ¹⁴caccia da se il male; se truova la cō¹⁵pagnia in fallo, l'abbandona; e quādo ¹⁶è vecchia, i sua figlioli la covano e pa¹⁷scono, infinchè more.

THE STORK.

This bird, by drinking saltwater purges itself of distempers. If the male finds his mate unfaithful, he abandons her; and when it grows old its young ones brood over it, and feed it till it dies.

H. I 14 a]

1238.

CICALA.

²Questa col suo canto fa tacere ³il cucco, more nell'olio, e resucita ⁴nello aceto, cāta per li ardēti caldi.

THE GRASSHOPPER.

This silences the cuckoo with its song. It dies in oil and revives in vinegar. It sings in the greatest heats.

PIPISTRELLO.

⁶Questo dov'è piv luce piv si fa ⁷orbo, e come piv guarda il sole ⁸piv s'acciecca; ⁹pel uitio che nō può ¹⁰stare do¹¹v'è la vir¹²tù.

THE BAT.

The more light there is the blinder this creature becomes; as those who gaze most at the sun become most dazzled.—For Vice, that cannot remain where Virtue appears.

PERNICE.

¹⁴Questa si trasmuta di femina i maschio, ¹⁵e dimētica il primo sesso, e fura per iuidia ¹⁶l'oua al'altre, e le coua, ma i nati segu¹⁷tano la uera madre.

THE PARTRIDGE.

This bird changes from the female into the male and forgets its former sex; and out of envy it steals the eggs from others and hatches them, but the young ones follow the true mother.

RŌDINE.

¹⁹Questa colla celidonia lumina i sua ²⁰ciecchi nati.

THE SWALLOW.

This bird gives sight to its blind young ones by means of celandine.

H. I 14 b]

1239.

OSTRIGA.—PEL TRADIMĒTO.

²Questa, quādo la luna è piena, s'apre tutta, ³e quādo il grācio la vede, dētro le gietta ⁴qualche sasso o festuca, e questa nō si ⁵può riserrare, ōde è cibo d'esso grāchio; ⁶così fa, chi apre la bocca a dire il suo segreto, ⁷chè si fa preda dello indiscreto auditore.

THE OYSTER.—FOR TREACHERY.

This creature, when the moon is full opens itself wide, and when the crab looks in he throws in a piece of rock or seaweed and the oyster cannot close again, whereby it serves for food to that crab. This is what happens to him who opens his mouth to tell his secret. He becomes the prey of the treacherous hearer.

8. cinguo. 10. cānta. 14. caccia dasse. 15. equādo. 16. issua. 17. scano.

BASILISCO.—CRUDELTA.

⁹Questo è fugito da tutti i serpēti; la don¹⁰nola per lo mezzo della ruta cōbatte con essi ¹¹e si l'uccide.

L'ASPIDO.

¹⁴Questo porta ne'dēti la subita morte ¹⁵e per nō sentire l'incāti, colla coda si ¹⁶stoppa li orecchi.

H. 1 15a]

DRAGO.

²Questo lega le gābe al liofante ³e quel li cade adosso, e l'uno e l'al⁴tro more, e morēdo fa sua vēdetta.

VIPERA.

⁶Questa nel suo accoppiare apre la bocca, e nel fine ⁷strīgnie dēti e amazza il marito, poi ⁸i figlioli in corpo crescivti straccia⁹no il uētre e occidono la madre.

SCORPIONE.

¹¹La saliu a sputa a digivno sopra dello scor¹²pione e l'occide; à similitudine dell'a-¹³stinētia della gola, che togle via e cura ¹⁴le malatie che da essa gola dipēdono, e a¹⁵pre la strada alle virtù.

H. 1 17a]

COCCODRILLO. IPOCRISIA.

²Questo animale piglia l'o³mo e subito l'uccide poichè l'à morso ⁴con lamētevole voce e molte lacrime ⁵lo piāge., e finito il lamēto crudel⁶mēte lo diuora.; così fa l'ipocrito ⁷che per ogni lieue cosa s'empie il uiso ⁸di lagrime; mostrādo un cor di tiglio e'ral⁹legrasi nel core dell'altrui male cō ¹⁰piātoso volto.

BOTTA.

¹²La botta fugie la luce del sole, e se pure ¹³per forza v'è tenyta, si gōfia tāta, che s'ascon¹⁴de la testa in basso, e privasi d'essi razzi; ¹⁵così fa chi è nimico della chiara e luciē¹⁶te virtù, che nō può se nō con gōfiato ¹⁷animo forzatamēte starle davāti.

16. stopa.

1240. delluno ellal. 6. suo coperbocha. 7. stīgnie dēti e amaza. 8. crescivti. 11. la sciliua . . dell'gsschor. 12. pione locide assimilitudine. 13. chettote viaconde. 14. I ||| mal ||||| che ||| a. Lines 14 and 15 are very indistinct and nearly effaced.

1241. 1. cocodrillo. 2. animale [essendo]. 3. poichella morto. 4. collamētevole. 8. mostrādo icor di tiglio e ra. 12. esse. 13. scofia chessasco. 14. baso. 15. così facie nimico . . ciara. 16. po . . con ||||| cōfiati. 17. ||||| animo . . stale.

THE BASILISK.—CRUELTY.

All snakes flee from this creature; but the weasel attacks it by means of rue and kills it.

THE ASP.

This carries instantaneous death in its fangs; and, that it may not hear the charmer it stops its ears with its tail.

1240.

THE DRAGON.

This creature entangles itself in the legs of the elephant which falls upon it, and so both die, and in its death it is avenged.

THE VIPER.

She, in pairing opens her mouth and at last clenches her teeth and kills her husband. Then the young ones, growing within her body rend her open and kill their mother.

THE SCORPION.

Saliva, spit out when fasting will kill a scorpion. This may be likened to abstinence from greediness, which removes and heals the ills which result from that gluttony, and opens the path of virtue.

1241.

THE CROCODILE. HYPOCRISY.

This animal catches a man and straightway kills him; after he is dead, it weeps for him with a lamentable voice and many tears. Then, having done lamenting, it cruelly devours him. It is thus with the hypocrite, who, for the smallest matter, has his face bathed with tears, but shows the heart of a tiger and rejoices in his heart at the woes of others, while wearing a pitiful face.

THE TOAD.

The toad flies from the light of the sun, and if it is held there by force it puffs itself out to much as to hide its head below and shield itself from the rays. Thus does the foe of clear and radiant virtue, who can only be constrainedly brought to face it with puffed up courage.

H. I 17 b]

1242.

BRUCO.—DELLA VIRTÙ IN GIENERALE.

³Il bruco, che mediante l'esercitato studio ⁴di tessere con mirabile artificio e sottile lauoro ⁵intorno a se fa la nova abitatione, escie ⁵poi fori di quella colle dipinte e belle ⁷ali, cō quelle leuādosi inverso il cielo.

RAGNIO.

⁹Il ragnio partorisce fori di se l'ar^{to}ti-
fittosa e maestrevole tela, la quale ¹¹gli
rēde per benefitto la presa preda.

H. I 18 a]

LIONE.

²Questo animale col suo tonāte grido
³desta i sua figlioli dopo il terzo giorno
⁴nati, aprēdo a quelli tutti li adormēta⁵ti
sēsi, e tutte le fiere, che ⁶nella selua sono,
fuggono.

⁷Puossi assimigliare a figlioli della ⁸virtù,
che mediāte il grido delle lode ⁹si sue-
gliano e crescono per li studi onorevoli
¹⁰che senpre piv gli inalza, e tutti i tristi
¹¹a esso grido fuggono ciessādosi dai ¹²ver-
tuosi.

¹³Ancora il leone copre le sue pedate,
¹⁴perchè nō s'intenda il suo viaggio ¹⁵per
i nimici; questo sta bene al capitano ¹⁶a
cielare i segreti del suo animo, acciochè
¹⁷il nimico nō cognosca i sua tratti.

H. I 18 b]

TARĀTA.

²Il morso della tarāta mātiene l'omo
³nel suo proponimēto, cioè quello che ⁴pen-
sano quādo fu morso.

DUGO E CIVETTA.

⁶Questi gastigano i loro schernitori ⁷pri-
vādoli di uista, chè così à ordina^{to} la na-
tura, perchè si cibino.

1242. Two notes are underneath this text. The first: 'nessuna chosa e da temere piu che lla sozza fama' is a repetition of the first line of the text given in Vol. I No. 695.

THE CATERPILLAR.—FOR VIRTUE IN GENERAL.

The caterpillar, which by means of assiduous care is able to weave round itself a new dwelling place with marvellous artifice and fine workmanship, comes out of it afterwards with painted and lovely wings, with which it rises towards Heaven.

THE SPIDER.

The spider brings forth out of herself the delicate and ingenious web, which makes her a return by the prey it takes.

THE LION.

This animal, with his thundering roar, rouses his young the third day after they are born, teaching them the use of all their dormant senses and all the wild things which are in the wood flee away.

This may be compared to the children of Virtue who are roused by the sound of praise and grow up in honourable studies, by which they are more and more elevated; while all that is base flies at the sound, shunning those who are virtuous.

Again, the lion covers over its foot tracks, so that the way it has gone may not be known to its enemies. Thus it besseems a captain to conceal the secrets of his mind so that the enemy may not know his purpose.

THE TARANTULA.

The bite of the tarantula fixes a man's mind on one idea; that is on the thing he was thinking of when he was bitten.

THE SCREECH-OWL AND THE OWL.

These punish those who are scoffing at them by pecking out their eyes; for nature has so ordered it, that they may thus be fed.

The second: *faticha fugga cholla fama in braccio quasi ochultata c* is written in red chalk and is evidently an incomplete sentence.

1245.

LEOFANTE.

²Il grāde elefante · à per natura quel
³che raro negli omīni si truova, cioè ⁴pro-
bità, prudētia, equità e osser⁵vātia e reli-
gione, inperochè, quādo ⁶la luna · si rinova ·,
questi vanno ai fivmī e quivi purgādosi
sollemnemēte ⁸si lauanò, e così salutato il
pianeta ⁹ritornano alle selue; E quādo ¹⁰sono
ammalati, stando supini, gitta¹¹no l'erbe
verso il cielo, quasi com'esse ¹²sacrificare
volessino; ¶ sotterrano li dē¹³ti quādo per
vecchiezza gli cadono; ¶ de' ¹⁴sua due dēti
l'uno adopera a caure ¹⁵le radici per ci-
barsi; all'altro cōserua ¹⁶la pūta per cō-
battere; Quādo sono ¹⁷superati da caccia-
tori, e chè la stāchezza ¹⁸gli uīcie per
cotali dēti l'elefanti, quelle trattesi, con esse
si ricomprano.

THE ELEPHANT.

The huge elephant has by nature what
is rarely found in man; that is Honesty,
Prudence, Justice, and the Observance of
Religion; inasmuch as when the moon is
new, these beasts go down to the rivers, and
there, solemnly cleansing themselves, they
bathe, and so, having saluted the planet, return
to the woods. And when they are ill, being
laid down, they fling up plants towards
Heaven as though they would offer sacri-
fice.—They bury their tusks when they fall
out from old age.—Of these two tusks they
use one to dig up roots for food; but they
save the point of the other for fighting with;
when they are taken by hunters and when
worn out by fatigue, they dig up these buried
tusks and ransom themselves.

H. 1 19 b]

1246.

Sono di leni menti e conoscono i peri-
coli; ²¶e se esso trova · l'omo solo e smarito,
³piacievilmēte lo rimette nella perduta
⁴strada, se truova le pedate dell'omo ⁵prima
che veda l'omo; ⁶¶esso teme tradimēto,
ōde si ferma ⁷e soffia, mostrādolo ali altri
elefanti, ⁸e fanno schiera e vanno assentita-
mēte.

⁹Questi vanno senpre a schiere, e 'l più
¹⁰vechio va ināzi, e 'l secōdo d'età resta
¹¹l'ultimo, e così chiudono la schiera; ¹²te-
monò vergognia, non vsano il co¹³ito se nō
di notte di nascosto, e nō tor¹⁴nano dopo
il coito alli armēti, se prima ¹⁵nō si lauanò
nel fiume; nō cōbattono ¹⁶le femine, come
gli altri animali; ¹⁷¶ed è tāto clemēte, che
mal uolōtieri per na¹⁸tura nō noce ai mē
potenti di se, e scō¹⁹trādosi nella sua via
e greggi delle pecore

They are merciful, and know the dangers,
and if one finds a man alone and lost, he
kindly puts him back in the road he has
missed, if he finds the footprints of the man
before the man himself. It dreads betrayal,
so it stops and blows, pointing it out to
the other elephants who form in a troop and
go warily.

These beasts always go in troops, and the
oldest goes in front and the second in age
remains the last, and thus they enclose the
troop. Out of shame they pair only at night
and secretly, nor do they then rejoin the herd
but first bathe in the river. The females do
not fight as with other animals; and it is
so merciful that it is most unwilling by nature
ever to hurt those weaker than itself. And
if it meets in the middle of its way a flock
of sheep

raising the bottom that he may easily get
 out. They greatly dread the noise of swine
 and fly in confusion, doing no less harm
 then, with their feet, to their own kind than
 to the enemy. They delight in rivers and
 are always wandering about near them,
 though on account of their great weight they
 cannot swim. They devour stones, and the
 trunks of trees are their favourite food.
 They have a horror of rats. Flies delight
 in their smell and settle on their back, and
 the beast scrapes its skin making its folds
 even and kills them.

H. I 20 b]

1248.

Quādo passano i fiumi, mādano ²i figli-
 oli diuerso il calar dell'acqua, ³e stando
 loro inverso l'erta ronpono ⁴il rapido corso
 dell'acqua, aciochè 'l cor⁵so non le menasse

 colla ⁷coda l'annoda le gābe, coll'alie ⁸e
 colle braccia anche li tigniē le coste ⁹e coi
 denti lo scanna, el liofante ¹⁰li cade adosso
 o il drago scoppia, ¹¹e così colla sua morte
 del nemico ¹²si uēdica.

When they cross rivers they send their
 young ones up against the stream of the
 water; thus, being set towards the fall, they
 break the united current of the water so that
 the current does not carry them away. The
 dragon flings itself under the elephant's body,
 and with its tail it ties its legs; with its wings
 and with its arms it also clings round its
 ribs and cuts its throat with its teeth, and
 the elephant falls upon it and the dragon
 is burst. Thus, in its death it is revenged
 on its foe.

IL DRAGONE.

THE DRAGON.

¹⁴Questi s'accōpagniano insieme e si
 tessa¹⁵no a uso di radici, e colla testa le-
 uata ¹⁶passano i paduli, e notano dove
 trouano ¹⁷migliore pastura, e se così non
 si vnissero,

These go in companies together, and
 they twine themselves after the manner of
 roots, and with their heads raised they cross
 lakes, and swim to where they find better
 pasture; and if they did not thus combine

H. I 21 a]

annegherebbero; così fa la unitione.

they would be drowned, therefore they
 combine.

SERPÈTE.

THE SERPENT.

³Il serpēte, grādissimo animale, ⁴quādo
 vede alcuno ucciello per l'aria, ⁵tira a se
 si forte il fiato, che si tira ⁶gli uccielli in
 bocca; Marco, ⁷Regulo, consule dello eser-
 cito Roma⁸no, fu col suo esercito da un simile
⁹animale assalito e quasi rotto, il qua¹⁰le
 animale, essēdo morto per una machina
¹¹mvrale, fu misurato 123 piedi, cio¹²è 64
 braccia e ¹1/2; avāzava colla testa tutte ¹³le
 piāte d'una selua.

The serpent is a very large animal.
 When it sees a bird in the air it draws in
 its breath so strongly that it draws the birds
 into its mouth too. Marcus Regulus, the
 consul of the Roman army was attacked,
 with his army, by such an animal and
 almost defeated. And this animal, being
 killed by a catapult, measured 123 feet,
 that is 64 1/2 braccia and its head was high
 above all the trees in a wood.

vna che avea vno putto intero in corpo ²il quale avea trāghiottito

one which had inside it a boy, entire, that it had swallowed.

MACLI. ¶ PEL SONNO È GIÛTO.

⁴Questa bestia nascie in Scādinavia isola; ⁵à forma di grā cavallo, se nō che la ⁶grā lūghezza dello collo e delli orecchi lo vari-⁷ano; pascie l'erba allo indietro, perchè à si ⁸lūgo il labro di sopra che pasciēdo inā⁹zi coprirebbe l'erba; à le gābe d'ū pezzo; ¹⁰per questo, quādo vuol dormire s'appoggia ¹¹a vno albero, e i cacciatori, ātivedēdo ¹²il loco vsato a dormire, segā quasi tutta ¹³la piāta, e quādo questo poi vi s'appoggia ¹⁴nel dormire, per lo sonno cade, e i cacciato¹⁵ri così lo piglano, e ogni altro modi di pi¹⁶glarlo è vano, perchè è d'incredibile velocità ¹⁷nel correre.

THE MACLI.—CAUGHT WHEN ASLEEP.

This beast is born in Scandinavia. It has the shape of a great horse, excepting that the great length of its neck and of its ears make a difference. It feeds on grass, going backwards, for it has so long an upper lip that if it went forwards it would cover up the grass. Its legs are all in one piece; for this reason when it wants to sleep it leans against a tree, and the hunters, spying out the place where it is wont to sleep, saw the tree almost through, and then, when it leans against it to sleep, in its sleep it falls, and thus the hunters take it. And every other mode of taking it is in vain, because it is incredibly swift in running.

H. 1 22 a]

1251.

BONASO NOCE COLLA FUGA.

²Questo nascie in Peonia; à collo ³cō crini simile al cauallo, in tutte ⁴l'altre parti è simile al toro, saluo ⁵che le sue corna sono in modo piegate ⁶indētro, che nō può cozzare, e per questo ⁷non à altro scanpo che la fuga, nella ⁸quale getta sterco per spatio di 400 ⁹braccia del suo corso, il quale, dove to¹⁰cca, abbrucia come foco.

THE BISON WHICH DOES INJURY IN ITS FLIGHT.

This beast is a native of Paeonia and has a neck with a mane like a horse. In all its other parts it is like a bull, excepting that its horns are in a way bent inwards so that it cannot butt; hence it has no safety but in flight, in which it flings out its excrement to a distance of 400 braccia in its course, and this burns like fire wherever it touches.

LEONI, PARDI, PĀTERE, TIGRI.

THE LIONESS.

When the lioness defends her young from the hand of the hunter, in order not to be frightened by the spears she keeps her eyes on the ground, to the end that she may not by her flight leave her young ones prisoners.

THE LION.

This animal, which is so terrible, fears nothing more than the noise of empty carts, and likewise the crowing of cocks. And it is much terrified at the sight of one, and looks at its comb with a frightened aspect, and is strangely alarmed when its face is covered.

THE PANTHER IN AFRICA.

This has the form of the lioness but it is taller on its legs and slimmer and long bodied; and it is all white and marked with black spots after the manner of rosettes; and all animals delight to look upon these rosettes, and they would always be standing round it if it were not for the terror of its face;

therefore knowing this, it hides its face, and the surrounding animals grow bold and come close, the better to enjoy the sight of so much beauty; when suddenly it seizes the nearest and at once devours it.

CAMELS.

The Bactrian have two humps; the Arabian one only. They are swift in battle and most useful to carry burdens. This animal is extremely observant of rule and measure, for it will not move if it has a greater weight than it is used to, and if it is taken too far it does the same, and suddenly stops and so the merchants are obliged to lodge there.

THE TIGER.

This beast is a native of Hyrcania, and it is something like the panther from the various spots on its skin. It is an animal

THE WEASEL.

This beast finding the lair of the basilisk kills it with the smell of its urine, and this smell, indeed, often kills the weasel itself.

THE CERASTES.

This has four movable little horns; so, when it wants to feed, it hides under leaves all of its body except these little horns which, as they move, seem to the birds to be some small worms at play. Then they immediately swoop down to pick them and the Cerastes suddenly twines round them and encircles and devours them.

THE AMPHISBOENA.

This has two heads, one in its proper place the other at the tail; as if one place were not enough from which to fling its venom.

THE IACULUS.

This lies on trees, and flings itself down like a dart, and pierces through the wild beast and kills them.

THE ASP.

The bite of this animal cannot be cured unless by immediately cutting out the bitten part. This pestilential animal has such a love for its mate that they always go in company. And if, by mishap, one of them is killed the other, with incredible swiftness, follows him who has killed it; and it is so determined and eager for vengeance that it overcomes every difficulty, and passing by every troop it seeks to hurt none but its enemy. And it will travel any distance, and it is impossible to avoid it unless by crossing water and by very swift flight. It has its eyes turned inwards, and large ears and it hears better than it sees.

THE ICHNEUMON.

This animal is the mortal enemy of the asp. It is a native of Egypt and when it sees an asp near its place, it runs at once to the bed or mud of the Nile and with this makes itself muddy all over, then it dries

sole, di nò'vo di fango s'inbratta; e così se-
guitando l'ū do⁸po l'altro si fa tre o 4 veste
a similitudine ⁹di corazza, e dipoi assalta
l'aspido, e bē cō¹⁰testa cō quello in modo
che, tolto il tēpo, ¹¹se li caccia in gola e
l'annega.

CROCODILLO.

¹³Questo nasce nel Nilo, à 4 piedi, vi¹⁴ve
in terra e in acqua, nè altro terrestre ¹⁵ani-
male si truova senza lingua che questo;
¹⁶e solo morde movēdo la mascella di
sopra; ¹⁷cresce insino in 40 piedi, è un-
gliato, ¹⁸armato di corame, atto a ogni colpo;
el di ¹⁹sta in terra, e la notte in acqua;
questo, ²⁰cibato di pesci, s'adormēta sulla
riua del ²¹Nilo colla bocca aperta e l'uc-
ciello detto

H. r 26 a]

trochilo, piccolissimo vciello, subito
li ²corre alla bocca e, saltatoli fra denti
³dentro, e' fora leva beccando il rimaso
⁴cibo; e così stuzzicādolo cō dilettevole
⁵voluttà lo inuita aprire tutta la bocca, ⁶e
così s'adormēta; questo veduto ⁷dal icneu-
mone subito si li slācia in bocca, ⁸e for-
toli lo stomaco e le budelle finalmēte ⁹l'uc-
cide.

DELFINI.

¹¹La natura à dato tal cognitione alli
ani¹²mali che, oltre allo conoscere la lor co-
¹³modità, conoscono la incomodità del ni-
¹⁴mico; onde intēde il delfino quāto ¹⁵va-
glia il taglio delle sue penne, posteli ¹⁶sulla
schiena, e quāto sia tenera la pācia ¹⁷del
cocodrillo; onde nel lor cōbattere se li
¹⁸caccia sotto e tagliali la pācia, e così
¹⁹l'uccide.

²⁰Il cocodrillo è terribile a chi fuggie, e
vilis²¹simo a chi lo caccia.

itself in the sun, smears itself again with
mud, and thus, drying one after the other,
it makes itself three or four coatings like a
coat of mail. Then it attacks the asp, and fights
well with him, so that, taking its time it
catches him in the throat and destroys him.

THE CROCODILE.

This is found in the Nile, it has four feet
and lives on land and in water. No other
terrestrial creature but this is found to have
no tongue, and it only bites by moving its
upper jaw. It grows to a length of forty feet
and has claws and is armed with a hide that
will take any blow. By day it is on land
and at night in the water. It feeds on fishes,
and going to sleep on the bank of the Nile
with its mouth open, a bird called

1259.

trochilus, a very small bird, runs at once
to its mouth and hops among its teeth
and goes pecking out the remains of the
food, and so inciting it with voluptuous
delight tempts it to open the whole of its
mouth, and so it sleeps. This being observed
by the ichneumon it flings itself into its
mouth and perforates its stomach and
bowels, and finally kills it.

THE DOLPHIN.

Nature has given such knowledge to
animals, that besides the consciousness of
their own advantages they know the disad-
vantages of their foes. Thus the dolphin
understands what strength lies in a cut from
the fins placed on his chine, and how tender
is the belly of the crocodile; hence in
fighting with him it thrusts at him from be-
neath and rips up his belly and so kills him.

The crocodile is a terror to those that flee,
and a base coward to those that pursue him.

1260.

THE HIPPOPOTAMUS.

This beast when it feels itself over-full
goes about seeking thorns, or where there
may be the remains of canes that have been

ve⁵na che la taglia, e cauato il sangue, che li ⁶bisogna, colla litta s'infanga, e risalta alla ⁷piaggia; à forma quasi come cavallo; l'ūghia, ⁸fessa, cōda torta, e dēti di cīghiale; collo cō ⁹crini la pelle; nō si può passare, se nō si ba¹⁰gnia; pasciesi di piāte ne' cāpi, entravi ¹¹allo dirieto; acciochè pare ne sia uscito.

IBIS.

¹³Questo à similitudine colla cicognia, e quan¹⁴do si sente ammalato, ēpie il gozzo d'acqua, ¹⁵e col becco si fa vn clistero.

CIERUI.

¹⁷Questo quando si sente morso dal ragno ¹⁸detto falangio māgia de' grāchi, e si libera ¹⁹di tale veneno.

H. 1 27 a)

LUCERTE.

²Questa quādo cōbatte colle serpi ³mangia la cicierbita; e sō libere.

CINGHIALE.

¹¹Questo medica i sua mali mangiādo ¹²della edera.

SERPE.

¹⁴Questa quādo si uol renouare, gitta il ¹⁵vechio scoglio, comīciādosì dalla testa; ¹⁶mvtasi in vn dì e vna notte.

PARTERA.

¹⁸Questa, poichè le sono uscite l'interiora, ¹⁹ancora combatte coi cani e cacciatori.

split, and it rubs against them till a vein is opened; then when the blood has flowed as much as he needs, he plasters himself with mud and heals the wound. In form he is something like a horse with long haunches, a twisted tail and the teeth of a wild boar, his neck has a mane; the skin cannot be pierced, unless when he is bathing; he feeds on plants in the fields and goes into them backwards so that it may seem, as though he had come out.

THE IBIS.

This bird resembles a crane, and when it feels itself ill it fills its craw with water, and with its beak makes an injection of it.

THE STAG.

These creatures when they feel themselves bitten by the spider called father-long-legs, eat crabs and free themselves of the venom.

1261.

THE LIZARD.

This, when fighting with serpents eats the sow-thistle and is free.

THE SWALLOW.

This [bird] gives sight to its blind young ones, with the juice of the celandine.

THE WEASEL.

This, when chasing rats first eats of rue.

THE WILD BOAR.

This beast cures its sickness by eating of ivy.

THE SNAKE.

This creature when it wants to renew itself casts its old skin, beginning with the head, and changing in one day and one night.

THE PANTHER.

This beast after its bowels have fallen out will still fight with the dogs and hunters.

9. si po passare. 10. pasciesi . . biāde. 11. vscito. 13. assimilitudine . . cignogna ecq"ā". 14. amalato . . il cozo dacque. 15. e chol becho . . cristero. 18. falange . . grāci essi.

FAVOLA.

²I tordi si rallegrarono forte, vedēdo
che l'omo prese la ciuetta ³e le tolse la
libertà, quella legando con forti legami ai
sua piedi; la ⁴qual ciuetta fu poi mediante
il uischio causa nō di far perdere ⁵la libertà
ai tordi, ma la loro propia vita; detta
per quelle ⁶terre che si rallegrā di uedere
perdere la libertà ai loro maggio⁷ri, me-
diante i quali poi perdono il soccorso, e
rimāgono lega⁸ti in potētia del loro nemico,
lasciādo la libertà e spesse volte la uita.

A FABLE.

The thrushes rejoiced greatly at seeing a
man take the owl and deprive her of liberty,
tying her feet with strong bonds. But this
owl was afterwards by means of bird-lime
the cause of the thrushes losing not only
their liberty, but their life. This is said
for those countries which rejoice in seeing their
governors lose their liberty, when by that
means they themselves lose all succour, and
remain in bondage in the power of their ene-
mies, losing their liberty and often their life.

²Dormèdo · il cane · sopra la pelle · d'un · castrone, vna delle sua ³pulci ·, sentèdo · l'odore · della vnta · lana ·, giudicò quello ⁴dovesse essere · loco di migliore · vita e piv sicura da denti e unghie del cane, che pascier⁵si del cane ·; e senza altri pensieri abbandonò il cane, e li entrata ⁶infra la folta lana ·, cominciò cō somma fatica · a volere ⁷trapassare alle radici de' peli ·; la quale impresa dopo molto ⁸sudore trovò esser uana ·, perchè tali peli erano tanto spessi che ⁹quasi si toccavano, e nō u'era spatio dove la pulcie potesse saggiare ¹⁰tal pelle ·; òde · dopo lūgo travaglio e fatica cominciò a vole¹¹re ritornare al suo cane ·, il quale essendo già partito, fu ¹²costretta dopo lūgo pētīmēto e amari piāti a morirsi di fame.

A FABLE.

A dog, lying asleep on the fur of a sheep, one of his fleas, perceiving the odour of the greasy wool, judged that this must be a land of better living, and also more secure from the teeth and nails of the dog than where he fed on the dog; and without farther reflection he left the dog and went into the thick wool. There he began with great labour to try to pass among the roots of the hairs; but after much sweating had to give up the task as vain, because these hairs were so close that they almost touched each other, and there was no space where fleas could taste the skin. Hence, after much labour and fatigue, he began to wish to return to his dog, who however had already departed; so he was constrained after long repentance and bitter tears, to die of hunger.

no; Io mi voglio nascondere in qualche occulto loco, e lì cō trāquillo riposo passare mia vita.; E così nascosto per alquāti mesi, ¹⁰vn giorno ritornato all'aria e uscito fori della sua guaina, vide se essere fatto a similitudine d'una rugginēte sega, e la sua superfittie non ui spechiare piv lo splendēte sole; ¹²cō vano pētīmēto indarno piāse lo inriparabile danno, con seco diciēdo: o quanto ¹³meglio era esercitare col barbiere il mio perduto taglio di tāta sottilità; dov'è la lustrante ¹⁴superfittie? certo la fastitiosa e brutta ruggine l'à consumata!

¹⁵Questo medesimo accade nelli ingiegni che in scābio dello esercitio si danno al'otio; ¹⁶I quali a similitudine del sopra detto rasojo perdonano la tagliente sua sottilità, ¹⁷e la rugine della ignioranza guasta la sua forma.

FAUOLA.

¹⁹Vna pietra novamēte per l'acque scoperta di bella grādezza si staua sopra vn certo loco rilevato, ²⁰dove terminava un dilettevole boschetto sopra vna sassosa strada in cō²¹pagnia d'erbe, di uari fiori di diuersi colori ornate, e vedea ²²la grā somma delle pietre che nella a se sotto ²³posta strada collocate erano.; le uenne desiderio di là giv lasciarsi ca²⁴dere, diciēdo cō seco: che fo io qui cō queste erbe? io voglio cō que²⁵ste mie sorelle in cōpagnia abitare; e giv lasciatosi cadere infra ²⁶le desiderate cōpagnie finì suo volubile corso.; e stata alquāto co²⁷miciò a essere dalle rote de' carri, dai piè de' ferrati cavalli, e de ²⁸viandāti a essere in continvo travaglio.; chi la volta, quello la pesta²⁹va; alcuna volta se leuava alcuno pezzo, quādo stava coperta da fā³⁰go o sterco di qualche animale.; e in vano riguardava il loco dō³¹de partita s'era in nel loco della solletaria e trāquilla pace;

³²Così accade a quelli che dalla vita soletaria cōtenplativa voglio³³no venir abitare nelle città infra i popoli pieni d'infiniti mali.

there pass my life in tranquil repose." And having thus remained hidden for some months, one day he came out into the air, and issuing from his sheath, saw himself turned to the similitude of a rusty saw while his surface no longer reflected the resplendent sun. With useless repentance he vainly deplored the irreparable mischief saying to himself: "Oh! how far better was it to employ at the barbers my lost edge of such exquisite keenness! Where is that lustrous surface? It has been consumed by this vexatious and unsightly rust."

The same thing happens to those minds which instead of exercise give themselves up to sloth. They are like the razor here spoken of, and lose the keenness of their edge, while the rust of ignorance spoils their form.

A FABLE.

A stone of some size recently uncovered by the water lay on a certain spot somewhat raised, and just where a delightful grove ended by a stony road; here it was surrounded by plants decorated by various flowers of divers colours. And as it saw the great quantity of stones collected together in the roadway below, it began to wish it could let itself fall down there, saying to itself: "What have I to do here with these plants? I want to live in the company of those, my sisters." And letting itself fall, its rapid course ended among these longed for companions. When it had been there sometime it began to find itself constantly toiling under the wheels of the carts the iron-shoed feet of horses and of travellers. This one rolled it over, that one trod upon it; sometimes it lifted itself a little and then it was covered with mud or the dung of some animal, and it was in vain that it looked at the spot whence it had come as a place of solitude and tranquil place.

Thus it happens to those who choose to leave a life of solitary comtemplation, and come to live in cities among people full of infinite evil.

²Le fiamme già aveano durato nella fornace ³de' bichieri, e veduto a se avvicinarsi vna ⁴candela in vn bello e lustrante candelieri, con gran desiderio si forzauano accostarsi a quella; infra le qua⁶li vna, lasciato el suo naturale ⁷corso e tiratasi dentro a vno voto stizzo, dove ⁸si pascieua e vsscita fori d'una piccola fessura ⁹alla cādela, che vicina l'era, si ¹⁰gittò e cō somma gelosità e ingordigia quella ¹¹diuorandō quasi a fine la condusse; e volendo ripa¹²rare al prolungamēto della sua vita, indar¹³no tētō tornare alla fornace, donde partita s'era, ¹⁴perchè fu costretta morire, le mazze insieme ¹⁵colla cādela, oē al fine cō piāto e pētīmēto ¹⁶in fastidioso fumo si converti, lasciādo ¹⁷tutte le sorelle in splendente e lūga vita e bellezza.

Some flames had already lasted in the furnace of a glass-blower, when they saw a candle approaching in a beautiful and glittering candlestick. With ardent longing they strove to reach it; and one of them, quitting its natural course, writhed up to an unburnt brand on which it fed and passed at the opposite end out by a narrow chink to the candle which was near. It flung itself upon it, and with fierce jealousy and greediness it devoured it, having reduced it almost to death, and, wishing to procure the prolongation of its life, it tried to return to the furnace whence it had come. But in vain, for it was compelled to die, the wood perishing together with the candle, being at last converted, with lamentation and repentance, into foul smoke, while leaving all its sisters in brilliant and enduring life and beauty.

Trovandosi alquanta poca neve ²appiccata alla sommità d'un sasso, il quale ³era collocato sopra la strema al⁴tezza d'una altissima mōtagnia, e raccol⁵to in se la imaginatione, comiciò con quella ⁶a considerare e infra se dire: Or nō son io ⁷da essere givdicata altera e superba, avere ⁸me piccola dramma di neve posto in si al⁹to loco? e sopportare che tanta quātità di neve, ¹⁰quanta di qui per me essere veduta può, stia ¹¹piv bassa di me? cierto la mia poca quāti¹²tà non merita questa altezza, chè bene posso per ¹³testimonāza della mia piccola figura conoscie¹⁴re quello che 'l sole fecie ieri alle mia ¹⁵conspagnie, le quali in poche ore dal solē furo¹⁶no disfatte; e questo interuenne per essersi ¹⁷posto piv alto che a loro nō si richiedea; io vo¹⁸glio fugire l'ira del sole, e abbassar mi, e trovare ¹⁹loco cōueniēte alla mia parua quātità; ²⁰e gittatasi in baso e comiciata a disciēdere rottādo ²¹dall'alte spiagge super l'altra neve, quāto piv ciercò ²²loco basso, piv crebbe sua quātità in

A small patch of snow finding itself clinging to the top of a rock which was lying on the topmost height of a very high mountain and being left to its own imaginings, it began to reflect in this way, saying to itself: "Now, shall not I be thought vain and proud for having placed myself—such a small patch of snow—in so lofty a spot, and for allowing that so large a quantity of snow as I have seen here around me, should take a place lower than mine? Certainly my small dimensions by no means merit this elevation. How easily may I, in proof of my insignificance, experience the same fate as that which the sun brought about yesterday to my companions, who were all, in a few hours, destroyed by the sun. And this happened from their having placed themselves higher than became them. I will flee from the wrath of the sun, and humble myself and find a place befitting my small importance." Thus, flinging itself down, it began to descend, hurrying from its high home on to the other snow; but the more it sought a low place

The cedar, being desirous of producing
a fine and noble fruit at its summit, set to
work to form it with all the strength of its
sap. But this fruit, when grown, was the
cause of the tall and upright tree-top being
bent over.

The peach, being envious of the vast
quantity of fruit which she saw borne on
the nut-tree, her neighbour, determined to
do the same, and loaded herself with her
own in such a way that the weight of the
fruit pulled her up by the roots and broke
her down to the ground.

The nut-tree stood always by a road side
displaying the wealth of its fruit to the passers
by, and every one cast stones at it.

The fig-tree, having no fruit, no one
looked at it; then, wishing to produce fruits
that it might be praised by men, it was
bent and broken down by them.

The fig-tree, standing by the side of the
elm and seeing that its boughs were bare
of fruit, yet that it had the audacity to keep
the Sun from its own unripe figs with its
branches, said to it: "Oh elm! art thou not
ashamed to stand in front of me. But wait
till my offspring are fully grown and you
will see where you are!" But when her
offspring were mature, a troop of soldiers
coming by fell upon the fig-tree and her

FAVOLA.

A FABLE.

²Trovādosi la noce essere della cornacchia ³portata sopra vn alto campanile, e per ⁴vna fessura, doue caddè, fu liberata dal mortale ⁵suo becco; pregò · esso muro · ⁶per quella · gratia che Dio li aveva dato · del essere tanto ⁷eminēte · e magnio · e ricco di si belle cāpane e di tā⁸to · onorevole · suono · ch'ella douesse soccorrere, ⁹poi ch'ella non avea potuta cadere sotto ¹⁰i verdi rami del suo vecchio padre ·, e essere nella gras¹¹sa terra, ricoperta dalle sue cadēti foglie ·, che non la ¹²volesse lui abbandonare ·, jnperoch'ella, trovādosi ¹³nel becco della · fiera corua, ¹⁴votò, che scappādo da essa voleua finire la ui¹⁵ta · sua · in un piccolo buco; alle quali parole ¹⁶il mvro ·, mosso · a cōpassione, fu cōtento riciettar¹⁷la nel loco ov' era caduta ·; e infra poco tēpo ¹⁸la noce cominciò aprirsi e mettere le radici infra ¹⁹le fessure delle pietre ·, e quelle allargare, e gitta²⁰re i rami fori della sua · caverna ·; e quegli ²¹in brieve leuati sopra lo edifitio, e ingrossate le ²²ritorte radici, cominciò aprire i mvri e ca²³uare le antiche pietre de' loro · uechi lochi; allo²⁴ra il muro · tardi e indarno pianse · la cagione del suo danno; ²⁵e in breve aprì e rovinò grā parte delle sua mēbra.

A nut, having been carried by a crow to the top of a tall campanile and released by falling into a chink from the mortal grip of its beak, it prayed the wall by the grace bestowed on it by God in allowing it to be so high and thick, and to own such fine bells and of so noble a tone, that it would succour it, and that, as it had not been able to fall under the verdurous boughs of its venerable father and lie in the fat earth covered up by his fallen leaves it would not abandon it; because, finding itself in the beak of the cruel crow, it had there made a vow that if it escaped from her it would end its life in a little hole. At these words the wall, moved to compassion, was content to shelter it in the spot where it had fallen; and after a short time the nut began to split open and put forth roots between the rifts of the stones and push them apart, and to throw out shoots from its hollow shell; and, to be brief, these rose above the building and the twisted roots, growing thicker, began to thrust the walls apart, and tear out the ancient stones from their old places. Then the wall too late and in vain bewailed the cause of its destruction and in a short time, it wrought the ruin of a great part of it.

FAVOLA.

²Il rovistico, sendo stimolato nelli sua sottili rami ripieni di novelli ³frutti dai pugnietti artigli e becco delle inportune merle, si do⁴leva cō pietoso ramarichio iuerso essa merla, pregando quella ⁵che, poichè lei li toglieva e sua diletti frutti, il merlo non le privasse ⁶delle foglie, le quali lo difendevano dai cocieti razzi del sole, e che coll'acute vnghe non la scorticasse e suestisse della sua tenera pelle; ⁸Alla quale la merla con vilani rāpognie rispose: o taci salua⁹tico sterpo! nō sai che la natura t'ha fatto produrre questi frutti ¹⁰per mio notrimēto? nō uedi che sei al mōdo per servirmi di tale cibo? ¹¹nō sai, vilano, che tu farai in nella prossima iuernata notrimēto e cibo del fuoco? le quali parole ascoltate dal albero ¹³patiētemēte, nō senza lacrime, infra poco tempo il merlo preso ¹⁴dalla ragnia, e colti de' rami per fare gabbia per icarcerare esso merlo ¹⁵toccò infra l'altri rami al sottile rovistico a fare legni minimi ¹⁶della gabbia, le quali vedēdo essere causa della persa liberta del merlo, ¹⁷rallegratasi mosse tale parole: O merlo io sono qui non ācora ¹⁸consumata, come dicievi, dal foco; prima vedrò te prigione, che tu me brughiata.

FAVOLA.

²⁰Veduto il lavro e mirto tagliare il pero, con alta voce ²¹gridarono: O pero, ove vai tu? ov'è la superbia che avevi quādo ²²avevi i tua maturi frutti? ora nō ci farai tu obra ²³colle tue folte chiome; Allora il pero rispose: io ne ve²⁴do l'agricola che mi taglia e mi porterà alla bottega d'ottimo ²⁵scultore, il quale mi farà con su' arte pigliare la forma ²⁶di Giove. Idio, e sarò dedicato nel tempio e dagli omini ²⁷adorato invece di Giove; e tu ti metti i pūto a rimanere ²⁸spesso storpiata e pelata de' tua rami, i quali mi sieno ²⁹dali omini per onorarmi poste d'intorno.

A FABLE.

The privet feeling its tender boughs loaded with young fruit, pricked by the sharp claws and beak of the insolent blackbird, complained to the blackbird with pitious remonstrance entreating her that since she stole its delicious fruits she should not deprive it of the leaves with which it preserved them from the burning rays of the sun, and that she should not divest it of its tender bark by scratching it with her sharp claws. To which the blackbird replied with angry upbraiding: "O, be silent, uncultured shrub! Do you not know that Nature made you produce these fruits for my nourishment; do you not see that you are in the world [only] to serve me as food; do you not know, base creature, that next winter you will be food and prey for the Fire?" To which words the tree listened patiently, and not without tears. After a short time the blackbird was taken in a net and boughs were cut to make a cage, in which to imprison her. Branches were cut, among others from the pliant privet, to serve for the small rods of the cage; and seeing herself to be the cause of the Blackbird's loss of liberty it rejoiced and spoke as follows: "O Blackbird, I am here, and not yet burnt by fire as you said. I shall see you in prison before you see me burnt."

A FABLE.

The laurel and the myrtle seeing the pear tree cut down cried out with a loud voice: "O pear-tree! whither are you going? Where is the pride you had when you were covered with ripe fruits? Now you will no longer shade us with your mass of leaves." Then the pear-tree replied: "I am going with the husbandman who has cut me down and who will take me to the workshop of a good sculptor who by his art will make me take the form of Jove the god; and I shall be dedicated in a temple and adored by men in the place of Jove, while you are bound always to remain maimed and stripped of your boughs, which will be placed round me to do me honour.

The hapless willow, finding that she could not enjoy the pleasure of seeing her slender branches grow or attain to the height she wished, or point to the sky, by reason of the vine and whatever other trees that grew near, but was always maimed and lopped and spoiled, brought all her spirits together and gave and devoted itself entirely to imagination, standing plunged in long meditation and seeking, in all the world of plants, with which of them she might ally herself and which could not need the help of her withes. Having stood for some time in this prolific imagination, with a sudden flash the gourd presented itself to her thoughts and tossing all her branches with extreme delight, it seemed to her that she had found the companion suited to her purpose, because the gourd is more apt to bind others than to need binding; having come to this conclusion

diliberatione rizza sua rami in uerso il cielo aspettando ¹⁷ qualche amichevole vcciello, che li fusse al desiderio mezzano; ¹⁸ jfra quali veduta a se vicina la sgarza disse inverso ¹⁹ di quella: o giẽtile vcciello, per quello soccorso ²⁰ che a questi giorni da mattina ne' mia rami trovasti, ²¹ quãdo l'affamato, crudele e rapace falcone ti voleva diuorare, ²² e per quelli riposi che sopra me spesso ài ²³ vsato quãdo ²⁴ l'ali tue a te riposo chiedeano, e per quelli piacie ²⁵ ri che infra detti mia rami scherzãdo colle tue cõpagnie ²⁶ ne' tua amoreggiamenti ài vsato, jo ti priego che tu truovi, ²⁷ la zucca, e inpetri da quella alquãte delle sue semẽze; ²⁸ e di a quelle che, nate ch'elle fieno, ch'io le tratterò no ²⁹ n altramẽte che se del mio corpo generate l'auessi; ³⁰ e similmẽte vsa tutte quelle parole, che di simile intẽ ³¹ tione persuasiue sieno, benchè a te, maestra de' linguag ³² gi, insegnare non bisogna; e se questo ³³ farai, io sono cõteta di ricieure il tuo nidio sopra ³⁴ il nascimẽto de' mia rami insieme colla tua fa ³⁵ miglia senza pagamẽto d'alcũ fitto; allora la sgar ³⁶ za fatto e fermato alquãti capitoli di novo col salice, e mas ³⁷ sima che biscie o faine sopra se mai non accettasse, ³⁸ alzato la coda e bassato la testa e gittatasi dal ramo ³⁹ rẽde il suo peso all'ali, e quelle battẽdo sopra ⁴⁰ la fugitiva aria, ora qua, ora in là curiosamẽte col timõ della coda ⁴¹ dirizzãdosi, perueñe a vna zucca, e cõ bel saluto ⁴² e alquãte bone parole inpetrò le dimandate semẽze; ⁴³ e condottele al salice fu con lieta ciera ricevuta; ⁴⁴ e rasspato alquãto coi piè il terreno vicino al salice, ⁴⁵ col becco in cierchio a esso essi grani piatò, li quali ⁴⁶ in brieve tẽpo cresciẽdo comiciarono collo accrescimẽto e aprimẽto de' sua ⁴⁷ rami a occupare tutti i rami del salice, e colle sue ⁴⁸ grã foglie a toglierle la bellezza del sole e del cielo; e nõ ⁴⁹ bastãdo tãto male, seguẽdo le zucche comiciarono, per discõ ⁵⁰ cio preso, a tirare le cime de' teneri rami inverso la te ⁵¹ rra con strane torture e disagio di quelli.

she awaited eagerly some friendly bird who should be the mediator of her wishes. Presently seeing near her the magpie she said to him: "O gentle bird! by the memory of the refuge which you found this morning among my branches, when the hungry cruel, and rapacious falcon wanted to devour you, and by that repose which you have always found in me when your wings craved rest, and by the pleasure you have enjoyed among my boughs, when playing with your companions or making love—I entreat you find the gourd and obtain from her some of her seeds, and tell her that those that are born of them I will treat exactly as though they were my own flesh and blood; and in this way use all the words you can think of, which are of the same persuasive purport; though, indeed, since you are a master of language, I need not teach you. And if you will do me this service I shall be happy to have your nest in the fork of my boughs, and all your family without payment of any rent." Then the magpie, having made and confirmed certain new stipulations with the willow,—and principally that she should never admit upon her any snake or polecat, cocked his tail, and put down his head, and flung himself from the bough, throwing his weight upon his wings; and these, beating the fleeting air, now here, now there, bearing about inquisitively, while his tail served as a rudder to steer him, he came to a gourd; then with a handsome bow and a few polite words, he obtained the required seeds, and carried them to the willow, who received him with a cheerful face. And when he had scraped away with his foot a small quantity of the earth near the willow, describing a circle, with his beak he planted the grains, which in a short time began to grow, and by their growth and the branches to take up all the boughs of the willow, while their broad leaves deprived it of the beauty of the sun and sky. And not content with so much evil, the gourds next began, by their rude hold, to drag the ends of the tender shoots down towards the earth, with strange twisting and distortion.

⁵²Allora scontēdosi, e indarno crollandosi per fare da se esse zuche cadere, e indarno ⁵³vaneggiando alquāti giorni in simile inganno, perchè la bona e forte collegatione tal ⁵⁴pēsiero negava, vedēdo passare il uēto., a quello racomādādosi, e quello soffiò forte; allora s'a⁵⁵perse il uechio e voto gābo del salice in 2 parti insino ⁵⁶alle sue radici; e caduto in 2 parti indarno pianse se me⁵⁷desimo, e conobbe che era nato per non aver mai bene.

Then, being much annoyed, it shook itself in vain to throw off the gourd. After raving for some days in such plans vainly, because the firm union forbade it, seeing the wind come by it commended itself to him. The wind flew hard and opened the old and hollow stem of the willow in two down to the roots, so that it fell into two parts. In vain did it bewail itself recognising that it was born to no good end.

FACIETIA.

²Andādo vn prete per la sua parrochia il sabato santo, dādo ³come vsanza l'acqua benedetta per le case, capitò nella stāza ⁴d'ū pittore, doue spargiēdo essa acqua sopra alcuna sua pittu⁵ra esso pittore vol-
tosi indiriato, alquāto crucciato; dis⁶se perchè faciesse tale spargimēto sopra le sue pit-
ture? allora ⁷il prete disse, essere così vsanza, e ch'era suo debito il fare ⁸così, e che faceva bene, e chi fa bene debbe aspettare be⁹ne e meglio, chè così promettea Dio, e che d'ogni bene, che si ¹⁰faceva in terra, se n'avrebbe di sopra per ogni vn 100; allora ¹¹il pittore, aspettato ch'egli uscisse fori, se li fecie di sopra ¹²alla finestra, e gittò vn grā sechione d'acqua adosso a esso ¹³prete, diciēdo: ecco che di sopra ti uiene per ogni v̄ 100, come ¹⁴tu diciesti, che accaderebbe del bene che mi facievi colla ¹⁵tua acqua santa, colla quale m'ài guasto mezze le mie ¹⁶pitture.

A JEST.

A priest, making the rounds of his parish on Easter Eve, and sprinkling holy water in the houses as is customary, came to a painter's room, where he sprinkled the water on some of his pictures. The painter turned round, somewhat angered, and asked him why this sprinkling had been bestowed on his pictures; then said the priest, that it was the custom and his duty to do so, and that he was doing good; and that he who did good might look for good in return, and, indeed, for better, since God had promised that every good deed that was done on earth should be rewarded a hundred-fold from above. Then the painter, waiting till he went out, went to an upper window and flung a large pail of water on the priest's back, saying: "Here is the reward a hundred-fold from above, which you said would come from the good you had done me with your holy water, by which you have damaged my pictures."

Vno · artigiano andando ²spesso a visitare vno signiore ³sanza · altro · proposito dimādare ⁴al quale, 'l signiore domandò ⁵quello · che · andava faciēdo? ⁶questo · disse che veniuā lì ⁷per · avere · de' piaciēri che

Wine, the divine juice of the grape, finding itself in a golden and richly wrought cup, on the table of Mahomet, was puffed up with pride at so much honour; when suddenly it was struck by a contrary reflection, saying to itself: "What am I about, that I should rejoice, and not perceive that I am now near to my death and shall leave my golden abode in this cup to enter into the foul and fetid caverns of the human body, and to be transmuted from a fragrant and delicious liquor into a foul and base one. Nay, and as though so much evil as this were not enough, I must for a long time lie in hideous receptacles, together with other fetid and corrupt matter, cast out from human intestines." And it cried to Heaven, imploring vengeance for so much insult, and that an end might henceforth be put to such contempt; and that, since that country produced the finest and best grapes in the whole world, at least they should not be turned into wine. Then Jove made that wine drunk by Mahomet to rise in spirit to his brain; and that in so deleterious a manner that it made him mad, and gave birth to so many follies that when he had recovered himself, he made a law that no Asiatic should drink wine, and henceforth the vine and its fruit were left free.

As soon as wine has entered the stomach it begins to ferment and swell; then the spirit of that man begins to abandon his body, rising as it were skywards, and the brain finds itself parting from the body. Then it begins to degrade him, and make him rave like a madman, and then he does irreparable · evil, killing his friends.

An artisan often going to visit a great gentleman without any definite purpose, the gentleman asked him what he did this for. The other said that he came there to have a pleasure which his lordship could not have;

lui ⁸aver nō potea; perochè ⁹volentieri vedeua omi¹⁰ni piv potenti di lui, come ¹¹fanno i popolani, ma che ¹²l' si¹²gnore non potea vedere se ¹³non omini di mē possa di lui; ¹⁴per questo i signori māca¹⁵vano d'esso piacere.

since to him it was a satisfaction to see men greater than himself, as is the way with the populace; while the gentleman could only see men of less consequence than himself; and so lords and great men were deprived of that pleasure.

C. A. 147b; 439a]

1284.

Vsano i frati minori a cīerti tempi alcune loro quaresime, nelle quali essi non māgiano carne ne' lor cōuēti, ²ma in viaggio, perchè essi viuono di limosine, anno liciētia di māgiare. ciò che è posto loro innāzi; oēde abattē³dosi in detti viaggi una copia d'essi frati a vn osteria. in cōpagnia d'ū cierto. mecantucolo, il quale essendo ⁴a vna medesima mēsa, alla quale nō fu portato per la pouertà dell'ostiero altro che vn pvllastro cotto; oēde es⁵so mercatucolo, vedendo questo essere poco per lui, si uolse a essi frati e disse: se io ho bē ⁶di ricordo, voi nō māgiate in tali di ne' vostri cōuēti. d'alcuna maniera di carne; alle quali parole i fra⁷ti furono costretti per la regola senza altre cavillationi. a dire ciò essere la uerità; oēde il mercātello ⁸ebbe il suo desiderio, e così māgiò essa polastra, e i frati fecero il meglio poterono; ove dopo tale desinare ⁹questi cōmēsari si partirono tutti e 3 di compagnia, e dopo alquanto di uiagio, trovati vn fiume di bona ¹⁰larghezza e profondità, essendo tutti 3 a piedi, i frati per pouertà e l'altro per auarità, fu neciessario per l'uso ¹¹della cōpagnia che vno de' frati, essendo scalzi, passasse sopra i sua omeri esso mercātucolo; onde datoli ¹²il frate al seruo i zoccoli, si caricò di tale uomo; onde accade, che trovandosi esso frate in mezzo del ¹³fiume, esso ancora si ricordò della sua regola, e fermatosi a vso di San Cristoforo alzò la testa ¹⁴inverso quello che l'aggravava, e disse: diñi vn poco, ài tu nessū dinari adosso? bē sai, rispose que¹⁵sto; come credete voi ch' a mia pari mercatēte andasse altramēti attorno? oimè, disse il frate, la nostra ¹⁶regola vieta che noi nō possiamo portare danari adosso. e subito lo gittò nell'acqua; la qual cosa conosciuta ¹⁷dal mercatēte facetamēte la già fatta ingivria essere vēdicata, cō piacevole uiso pacificamēte, ¹⁸mezzo arossito per vergognia, la uēdetta sopportò.

Franciscan begging Friars are wont, at certain times, to keep fasts, when they do not eat meat in their convents. But on journeys, as they live on charity, they have license to eat whatever is set before them. Now a couple of these friars on their travels, stopped at an inn, in company with a certain merchant, and sat down with him at the same table, where, from the poverty of the inn, nothing was served to them but a small roast chicken. The merchant, seeing this to be but little even for himself, turned to the friars and said: "If my memory serves me, you do not eat any kind of flesh in your convents at this season." At these words the friars were compelled by their rule to admit, without cavil, that this was the truth; so the merchant had his wish, and eat the chicken and the friars did the best they could. After dinner the messmates departed, all three together, and after travelling some distance they came to a river of some width and depth. All three being on foot—the friars by reason of their poverty, and the other from avarice—it was necessary by the custom of company that one of the friars, being barefoot, should carry the merchant on his shoulders: so having given his wooden shoes into his keeping, he took up his man. But it so happened that when the friar had got to the middle of the river, he again remembered a rule of his order, and stopping short, he looked up, like Saint Christopher, to the burden on his back and said: "Tell me, have you any money about you?"—"You know I have", answered the other, "How do you suppose that a Merchant like me should go about otherwise?" "Alack!" cried the friar, "our rules forbid as to carry any money on our persons," and forthwith he dropped him into the water, which the merchant perceived was a facetious way of being revenged on the indignity he had done them; so, with a smiling face, and blushing somewhat with shame, he peaceably endured the revenge.

per ⁹ch'io · ti uoglio bene ·, e non uoglio che, dici¹⁰do tu male ad altri di me ·, tuo amico ·, che al¹¹tri abbiano, come me, a fare trista impressione ¹²di te ·, dicendo tu a quelli male di me, tuo amico; ¹³ōde, non vsando noi piv insieme, parrà che noi ¹⁴siamo fatti nimici, e per il dire tu male di me, com'è ¹⁵tua vsanza ·, non sarai tanto da essere biasi¹⁶mato ·, come se noi usassimo · insieme.

timate with you because I love you, and I do not choose that you, by speaking ill of me, your friend, to others, should produce in others, as in me, a bad impression of yourself, by speaking evil to them of me, your friend. Therefore, being no longer intimate together, it will seem as though we had become enemies; and in speaking evil of me, as is your wont, you will not be blamed so much as if we continued intimate.

C. A. 75 b; 219 d]

1288.

Vno disputādo e vantādosī · di sapere fare molti vari · e belli · giochi ·, vn altro de' circostanti · disse: jo so fare ²vno gioco · il quale · farā · trarre le brache · a chi a me parirā; il primo vantatore, trovandosi senza brache, ³disse · che a me non le sarai trarre e vo' dare vn pajo di calze; il proponitore d'esso gioco accettato ⁴lo invito · in pro mvto piv paja di brache, e trassele nel uolto · al mittitore delle calze, e vinse il pegnio.

A man was arguing and boasting that he knew many and various tricks. Another among the bystanders said: "I know how to play a trick which will make whomsoever I like pull off his breeches." The first man—the boaster—said: "You won't make me pull off mine, and I bet you a pair of hose on it." He who proposed the game, having accepted the offer, produced breeches and drew them across the face of him who bet the pair of hose and won the bet [4].

⁵Vno disse a vn suo consciēte: tu ài · tutti · li ochi · trasmutati · in strano · colore; Quello · li ripose interuenirli ⁶spesso, ma tu nō ci ài posto cura;—e quādo t'adiuicē questo?—rispose l'altro: ogni volta, che mia · ochi vedono jl tuo viso ⁷strano ·, per la violenza ricevuta da si grā dispiaciere · subito s'impallidiscono · e mvntano in istrā colore;

A man said to an acquaintance: "Your eyes are changed to a strange colour." The other replied: "it often happens, but you have not noticed it." "When does it happen?" said the former. "Every time that my eyes see your ugly face, from the shock of so unpleasing a sight they suddenly turn pale and change to a strange colour."

⁸Vno disse a un altro: tu ài tutti li occhi mutati in istrā colore; Quello li rispose egli è perchè i mia ochi vedono ⁹il tuo viso strano.

A man said to another: "Your eyes are changed to a strange colour." The other replied: "It is because my eyes behold your strange ugly face."

¹⁰Vno disse che in suo paese · nascievano le piv strane cose del mōdo ·; l'altro rispose: tu che sei vi na¹¹to, confermi ciò esser uero · per la stranezza della tua brutta presenza.

A man said that in his country were the strangest things in the world. Another answered: "You, who were born there, confirm this as true, by the strangeness of your ugly face."

Tr. 78]

1289.

Dispreggiādo uno vecchio publicamēte vn giovane mostrādo auda²cemēte nō temer quello, onde il giovane li rispuose che la ³sua lūga · età li faceva migliore scudo che la lingua ⁴o la forza.

An old man was publicly casting contempt on a young one, and boldly showing that he did not fear him; on which the young man replied that his advanced age served him better as a shield than either his tongue or his strength.

PROPHECIES.

C. A. 143 a; 426 a]

1293.

DIVISIONE DELLA PROFETIA.

²Prima delle cose degli animali; secōda delli ³irrationali; ³^a delle piāte, quarta delle cerimonie; ⁴quīta de' costumi; sesta delli casi overo editti, over qui⁵stioni; settima de' casi che nō possono stare ⁶in natura, come dire dī quella cosa, quāto piv ne le-⁷vi piv cresce; e riserua i grādi casi ⁸inverso il fine, e deboli dà dal principio, ⁹e mōstra prima i mali, e poi le punitiōi ¹⁰delle cose filosofiche.

〔Delle formiche.〕

¹²Molti popoli fien quelli che nascōderā se ¹³i figlioli e le sue vettovaglie dentro alle oscure caverne, ¹⁴e lì nelli lochi tenebrosi ciberā se e sua ¹⁵famiglia per molti mesi senza altro lume accidentale o naturale.

THE DIVISION OF THE PROPHECIES.

First, of things relating to animals; secondly, of irrational creatures; thirdly of plants; fourthly, of ceremonies; fifthly, of manners; sixthly, of cases or edicts or quarrels; seventhly, of cases that are impossible in nature [paradoxes], as, for instance, of those things which, the more is taken from them, the more they grow. And reserve the great matters till the end, and the small matters give at the beginning. And first show the evils and then the punishment of philosophical things.

〔Of Ants.〕

These creatures will form many communities, which will hide themselves and their young ones and victuals in dark caverns, and they will feed themselves and their families in dark places for many months without any light, artificial or natural.

1293. 3. inrationali . . cirimonie. 4. sessta. 5. chasi. 6. inatura. 7. cresscie . . chasi. 9. emāli. 12. quei . . nascōderā. 13. e sue | "figlioli" e . . dēntro alle "osscure" caverne. 14. elli nelli. 15. famiglia "per molti mesi" senza . . accidentale.

1293. Lines 1—51 are in the original written in one column, beginning with the text of line 11. At the end of the column is the programme for the arrangement of the prophecies, placed here at the head: Lines 56—79 form a second column, VOL. II.

lines 80—97 a third one (see the reproduction of the text on the facsimile Pl. CXVIII).

Another suggestion for the arrangement of the prophecies is to be found among the notes 55—57 on page 357.

[[Dell'api.]]

¹⁷E a molti altri sarā tolte le mvnítoni e lor cibi, ¹⁸e crudelmēte da giēte senza ragione saranno ¹⁹sommerse e annegate; o giustitia di Dio ²⁰perchè nō ti desti a vedere così malmenare e tua ²¹creati?

[[Delle pecore vacche ²³e capre e simili.]]

²⁴A innumerabili saran tolti i loro piccoli figlio²⁵li e quelli scarnati ²⁶e crudelissimamēti squartati.

[[Delle noci e vliue e ghiā²⁸de e castagnie e simili.]]

²⁹Molti figlioli da spietate bastona³⁰te fieno tolti dalle propie braccia delle lor ³¹madri e gittati in terra e poi lacerati.

[[De'fanciulli che stanno ³³legati nelle fascie.]]

³⁴O città marine, io vedo in uoi i vostri citta³⁵dini così femine come maschi stret³⁶tamente dai forti legami colle braccia e ganbe esser le³⁷gati da gente che non itenderanno i vostri li³⁸guaggi, e sol ui potrete sfogare li vostri dolori e per³⁹duta libertà mediante i lagrimosi piā⁴⁰ti e li sospiri e lamentatione infra uoi mede⁴²simi, chè chi vi lega, non v'intenderà, nè voi loro in⁴²tenderete.

[[Delle gatte che māgiano i topi.]]

⁴⁴A voi città dell'Africa si uedrā i uostri nati essere ⁴⁵squarciati nelle propie case de' crudelissimi e ra⁴⁶paci animali del paese vostro.

[[Delli asini bastonati.]]

⁴⁸O natura, perchè ti sei fatto ⁴⁹partiale, facci⁵⁰doti ai tua figli d'alcuna pietosa e benignia madre, ad'altri crudelissima e spieta⁵¹ta matrignia? io vedo i tua figlioli esser dati in al⁵²trui seruitù senza mai benefito alcuno, e in lo⁵³co di remunerazione de' fatti benefiti esser pagati ⁵⁴di grādissimi martiri, e spēdere senpre la lo⁵⁵r vita in benefito del suo mal fattore.

[[Of Bees.]]

And many others will be deprived of their store and their food, and will be cruelly submerged and drowned by folks devoid of reason. Oh Justice of God! Why dost thou not wake and behold thy creatures thus ill used?

[[Of Sheep, Cows, Goats and the like.]]

Endless multitudes of these will have their little children taken from them ripped open and flayed and most barbarously quartered.

[[Of Nuts, and Olives, and Acorns, and Chesnuts, and such like.]]

Many offspring shall be snatched by cruel thrashing from the very arms of their mothers, and flung on the ground, and crushed.

[[Of Children bound in Bundles.]]

O cities of the Sea! In you I see your citizens—both females and males—tightly bound, arms and legs, with strong withes by folks who will not understand your language. And you will only be able to assuage your sorrows and lost liberty by means of tearful complaints and sighing and lamentation among yourselves; for those who will bind you will not understand you, nor will you understand them.

[[Of Cats that eat Rats.]]

In you, O cities of Africa your children will be seen quartered in their own houses by most cruel and rapacious beasts of your own country.

[[Of Asses that are beaten.]]

[48] O Nature! Wherefore art thou so partial; being to some of thy children a tender and benign mother, and to others a most cruel and pitiless stepmother? I see children of thine given up to slavery to others, without any sort of advantage, and instead of remuneration for the good they do, they are paid with the severest suffering, and spend their whole life in benefitting those who ill treat them.

[[Delli omini che dormono nell'asse d'alberi.]]

⁵⁷Li omini dormiranno e māgieranno e abiterāno ⁵⁸infra li alberi nelli selue e cāpagnie.

[[Del sogniare.]]

⁶⁰Alli omini parrà vedere nel cielo nove rui⁶¹ne; parrā in quello leuarsi a uolo, e di quello fuggi⁶²re cō penvria le fiamme che di lui discē⁶³dono; sentirā parlare li animali di qua⁶⁴lūche sorte in linguaggio vmano; scorre⁶⁵ranno immediate colla lor persona ⁶⁶in diverse parti del mōdo senza mo⁶⁷to; vedrāno nelle tenebre grādissimi ⁶⁸splēdori; o meraviglia della vmana ⁶⁹spetie qual frenesia t'ā sī condotto! ⁷⁰parlerai cogli animali di qualūche spetie, ⁷¹e quelli cō tecò in linguaggio vmano, ⁷²vedrāti cadere di grande alture san⁷³za tuo danno; i torrēti t'accompa⁷⁴gneranno e mischieranno col lor rapido corso . . .

[[De' cristiani.]]

⁸¹Molti che tengono la fede del figlio-⁸²lo e sol fan tenpli nel nome ⁸³della madre.

[[Del cibo stato animato.]]

⁸⁴Gran parte de' corpi animati ⁸⁵passerà pe' corpi degli altri animali, ⁸⁶cioè le case disabitate passerā ⁸⁷in pezzi per le case abitate, dan⁸⁸do a quella vtile, e portā⁸⁹do cō seco i sua danni; ⁹⁰cioè la uita dell'omo si fa dalle cose ⁹¹māgiate, le quali portā con se⁹²co la parte dell'omo ch'è morta . . .

[[Of Men who sleep on boards of Trees.]]

Men shall sleep, and eat, and dwell among trees, in the forests and open country.

[[Of Dreaming.]]

Men will seem to see new destructions in the sky. The flames that fall from it will seem to rise in it and to fly from it with terror. They will hear every kind of animals speak in human language. They will instantaneously run in person in various parts of the world, without motion. They will see the greatest splendour in the midst of darkness. O! marvel of the human race! What madness has led you thus! You will speak with animals of every species and they with you in human speech. You will see yourself fall from great heights without any harm and torrents will accompany you, and will mingle with their rapid course.

[[Of Christians.]]

Many who hold the faith of the Son only build temples in the name of the Mother.

[[Of Food which has been alive.]]

[84] A great portion of bodies that have been alive will pass into the bodies of other animals; which is as much as to say, that the deserted tenements will pass piecemeal into the inhabited ones, furnishing them with good things, and carrying with them their evils. That is to say the life of man is formed from things eaten, and these carry with them that part of man which dies . . .

C. A. 1436; 4266]

1294.

[[Delli uftj funerali ²e processioni e lumi ³e cāpane e cōpagnia.]]

⁴Agli omini saran fatti grandissimi ⁵onori e ponpe senza lor saputa.

[[Of Funeral Rites, and Processions, and Lights, and Bells, and Followers.]]

The greatest honours will be paid to men, and much pomp, without their knowledge.

the other notes on the same sheet and of a somewhat different style. The ink is also of a different hue, as may be seen on the original sheet at Milan.

C. A. 362a; 1143a]

1295.

[[Dell auaro.]]

²Molti fieno quelli che con ogni studio e sollecitudine seguiranno ³con furia quella cosa che senpre li à spauētati, nō conosciendo la sua ⁴malignità.

[[Delli omini che, quāto piv inuechiano, piv ⁶si fanno avari, chè auēdosi a star poco dovrebbero farsi liberali.]]

⁷Vedansi a quelli, che son giudicati di piv speriētia e giuditio, quanto ⁸egli' anno mē bisogno delle cose, cō piv auidità cercale e riseruarle.

[[Della fossa.]]

¹¹Starā molti occupati in esercitio a leuare di quella cosa che tanto crescerā, quan¹²to se ne leuò.

[[Del peso posto sul piumaccio.]]

¹⁴E a molti corpi nel vedere da lor leuar la testa, si uedrā manifesta¹⁵mente crescere, e rendendo loro la leuata testa · immediatamente ¹⁶diminviscono la grādezza.

[[Del pigliare de' pidocchi.]]

¹⁸E saran molti cacciatori d'animali che, quanto piv ne piglierāno ¹⁹māco n'avranno, e così de conuerso piv n'avrà, quāto men ne piglie²⁰ranno.

[[Dello tignere l'acqua colle 2 sechie a vna sola corda.]]

²²E rimaranno occupati molti che quāto piv ²³tirerāno in giù la cosa, essa piv se ne fugirà in contrario ²⁴modo.

[[Le lingue de' porci e vitelli nelle budelle.]]

²⁸O cosa spurca, che si vedrà l'uno animale aver la lingua ²⁹in culo all'altro.

[[De' crivelli fatti di pelle d'animali.]]

³¹Vedrassi il cibo degli animali passar dentro alle ³²lor pelli per ogni parte salvo che per la bocca, e penetra³³re dall'opposita parte insino alla piana terra.

[[Of the Avaricious.]]

There will be many who will eagerly and with great care and solicitude follow up a thing, which, if they only knew its malignity, would always terrify them.

[[Of those men, who, the older they grow, the more avaricious they become, whereas, having but little time to stay, they should become more liberal.]]

We see those who are regarded as being most experienced and judicious, when they least need a thing, seek and cherish it with most avidity.

[[Of the Ditch.]]

Many will be busied in taking away from a thing, which will grow in proportion as it is diminished.

[[Of a Weight placed on a Feather-pillow.]]

And it will be seen in many bodies that by raising the head they swell visibly; and by laying the raised head down again, their size will immediately be diminished.

[[Of catching Lice.]]

And many will be hunters of animals, which, the fewer there are the more will be taken; and conversely, the more there are, the fewer will be taken.

[[Of Drawing Water in two Buckets with a single Rope.]]

And many will be busily occupied, though the more of the thing they draw up, the more will escape at the other end.

[[Of the Tongues of Pigs and Calves in Sausage-skins.]]

Oh! how foul a thing, that we should see the tongue of one animal in the guts of another.

[[Of Sieves made of the Hair of Animals.]]

We shall see the food of animals pass through their skin everyway excepting through their mouths, and penetrate from the outside downwards to the ground.

〔Of Lanterns.〕

[35]The cruel horns of powerful bulls will screen the lights of night against the wild fury of the winds.

〔Of Feather-beds.〕

Flying creatures will give their very feathers to support men.

〔Of Animals which walk on Trees—wearing wooden Shoes.〕

The mire will be so great that men will walk on the trees of their country.

〔Of the Soles of Shoes, which are made from the Ox.〕

And in many parts of the country men will be seen walking on the skins of large beasts.

〔Of Sailing in Ships.〕

There will be great winds by reason of which things of the East will become things of the West; and those of the South, being involved in the course of the winds, will follow them to distant lands.

〔Of Worshipping the Pictures of Saints.〕

Men will speak to men who hear not; having their eyes open, they will not see; they will speak to these, and they will not be answered. They will implore favours of those who have ears and hear not; they will make light for the blind.

〔Of Sawyers.〕

There will be many men who will move one against another, holding in their hands a cutting tool. But these will not do each other any injury beyond tiring each other; for, when one pushes forward the other will draw back. But woe to him who comes between them! For he will end by being cut in pieces.

〔Silk-spinning.〕

Dismal cries will be heard loud, shrieking with anguish, and the hoarse and smothered tones of those who will be despoiled, and at last left naked and motionless; and this by reason of the mover, which makes every thing turn round.

¶ Del mettere e trarre il pan dalla bocca del forno. ¶

⁷⁰Per tutte le città e terre e castelli e case si uedrà, per desiderio di māgiare, trarre il ⁷¹proprio cibo di bocca l'uno all'altro senza poter fare difesa alcuna.

¶ Le terre lauorate. ¶

⁷³Vedrassi voltare la terra sotto sopra e risguardare l'opositi ⁷⁴emispherii e scoprire le splonche a ferocissimi animali.

¶ Del seminare. ¶

⁷⁶Allora in grā parte delli omini, che resterā uiui, gitterā ⁷⁷fori delle lor case le scrbate vettovaglie in libera preda delli ⁷⁸vcelli e animali terrestri senza curarsi d'essi in parte alcuna.

¶ Delle piogge che fanno che fiumi intorbidati ⁸⁰portan via le terre. ¶

⁸¹Verrà diuerso il cielo chi trasmuterā gran parte dell'Africa ⁸²che si mostra a esso cielo. inverso l'Europa, e quella di Euro⁸³pa inverso l'Africa, e quelle delle provincie Scitiche si mischieranno in⁸⁴sieme con grā revolutione.

¶ De legniami che bruciano. ¶

⁸⁷Li alberi e arbusti delle grā selue si convertiranno in cenere.

¶ Delle fornaci di mattoni e calcina. ¶

⁸⁹Al fine la terra si farà rossa per lo infocamēto di molti giorni, ⁹⁰e le pietre si convertiranno in cenere.

¶ I pesci lessi. ¶

⁹²Li animali d'acqua moriranno nelle bellonti acque.

¶ L'uliuē che cadono dagli uliui dannoci l'olio che fa lume. ¶

⁹⁴Discenderā con furia diuerso la terra, chi ci darā notrimēto e luce.

¶ Of putting Bread into the Mouth of the Oven and taking it out again. ¶

In every city, land, castle and house, men shall be seen, who for want of food will take it out of the mouths of others, who will not be able to resist in any way.

¶ Of tilled Land. ¶

The Earth will be seen turned up side down and facing the opposite hemispheres, uncovering the lurking holes of the fiercest animals.

¶ Of Sowing Seed. ¶

Then many of the men who will remain alive, will throw the victuals they have preserved out of their houses, a free prey to the birds and beasts of the earth, without taking any care of them at all.

¶ Of the Rains, which, by making the Rivers muddy, wash away the Land. ¶

[81] Something will fall from the sky which will transport a large part of Africa which lies under that sky towards Europe, and that of Europe towards Africa, and that of the Scythian countries will meet with tremendous revolutions [84].

¶ Of Wood that burns. ¶

The trees and shrubs in the great forests will be converted into cinder.

¶ Of Kilns for Bricks and Lime. ¶

Finally the earth will turn red from a conflagration of many days and the stones will be turned to cinders.

¶ Of boiled Fish. ¶

The natives of the waters will die in the boiling flood.

¶ Of the Olives which fall from the Olive trees, shedding oil which makes light. ¶

And things will fall with great force from above, which will give us nourishment and light.

¶ Delle ciuette e gufi; ciò che succhiella alla parra. ¶

⁹⁶Molti periranno di fracassamento di testa e salteranno loro li occhi in grā par⁹⁷te della testa per causa d'animali pavrosi vsciti dalle tenebre.

¶ Del lino che fa la cura de' giēti. ¶

⁹⁹Sarā reveriti e onorati e cō reuerētia e amore ascoltati, li sua precetti ¹⁰⁰di chi prima fusse legato, stratiato o martorizzato da molte e diuerse battitoje.

¶ De' libri che insegnano precetti. ¶

¹⁰²I corpi sanz'anima ci daranno con lor sententie precietti vtili al ben morire.

¶ De' battuti e scoreggiati. ¶

¹⁰⁴Li omini si nasconderanno sotto le scorze delle scorticate erbe, e quiui gri¹⁰⁵dando si darā martiri con battimēti di menbra a se medesimi.

¶ Delle maniche de' coltegli fatte di corna ¹¹¹di castrone. ¶

¹¹²Nelle corna delli animali si vedranno tagliēti ¹¹³ferri colli quali si torna la uita a molti della loro ¹¹⁴spetie.

¶ Della notte che nō si conosce ¹¹⁶alcun colore. ¶

¹¹⁷Verrā a tanto che non si conoscerà differenza infra ¹¹⁸colori, anzi si faran tutti di nera qualità.

¶ Delle spade e lance che per se ¹²⁰mai nuocono a nessuno. ¶

¹²¹Chi per se è māsueto e senza alcuna offensione, si farā ¹²²spauentevole e feroce mediante le triste cōpa¹²³gnie, e torrā la vita crudelissimamēte ¹²⁴a molte genti; e piv n'ucciderebbe, se corpi sā¹²⁵z'anima e usciti dalle spelonche non li difendessino, ¹²⁶cioè le corazze di ferro.

¶ De' laccioli e trappole. ¶

¹²⁸Molti morti si moverā con furia e piglierāno e legheranno ¹²⁹i vivi, e serviranno gli a lor nemici circa ¹³⁰la lor morte e distrutione.

¶ Of Owls and screech owls and what will happen to certain birds. ¶

Many will perish of dashing their heads in pieces, and the eyes of many will jump out of their heads by reason of fearful creatures come out of the darkness.

¶ Of flax which works the cure of men. ¶

That which was at first bound, cast out and rent by many and various beaters will be respected and honoured, and its precepts will be listened to with reverence and love.

¶ Of Books which teach Precepts. ¶

Bodies without souls will, by their contents give us precepts by which to die well.

¶ Of Flagellants. ¶

Men will hide themselves under the bark of trees, and, screaming, they will make themselves martyrs, by striking their own limbs.

¶ Of the Handles of Knives made of the Horns of Sheep. ¶

We shall see the horns of certain beasts fitted to iron tools, which will take the lives of many of their kind.

¶ Of Night when no Colour can be discerned. ¶

There will come a time when no difference can be discerned between colours, on the contrary, everything will be black alike.

¶ Of Swords and Spears which by themselves never hurt any one. ¶

One who by himself is mild enough and void of all offence will become terrible and fierce by being in bad company, and will most cruelly take the life of many men, and would kill many more if they were not hindered by bodies having no soul, that have come out of caverns—that is, breastplates of iron.

¶ Of Snares and Traps. ¶

Many dead things will move furiously, and will take and bind the living, and will ensnare them for the enemies who seek their death and destruction.

〔De' metalli.〕

¹³²Uscirà dalle oscure e tenebrose ¹³³spelonche · che metterà tutta l'umana spe¹³⁴tie in grandi affanni, pericoli e mor¹³⁵te ·; a molti segua¹³⁶ci lor, dopo molti affanni, darà ¹³⁷diletto; ma chi nō fia suo partigiano morrà ¹³⁸con stento e calamità; questo commette¹³⁹rà infiniti tradimēti, questo avmēte¹⁴⁰rà e persuaderà li omini tristi alli assassinamēti ¹⁴¹e latrocini · e le perfidie ·; questa darà ¹⁴²sospetto · a i sua partigiani ·; questo torrà ¹⁴³lo stato alle città libere; questo torrà ¹⁴⁴la uita a molti; questo travaglierà ¹⁴⁵li omini infra loro con molte arti, ¹⁴⁶inganni e tradimēti; o animal mo¹⁴⁷struoso! quāto sarebbe meglio agli omini ¹⁴⁸che tutti tornassero nell'inferno! per costui ¹⁴⁹rimarrā diserte le grā selue delle lor ¹⁵⁰piāte; per costui infiniti animali perderanno la ui¹⁵¹ta.

〔Del fuoco.〕

¹⁵³Nascierà di piccolo principio, ¹⁵⁴chi si farà cō prestezza grande; que¹⁵⁵sto non stimerà alcuna creata ¹⁵⁶cosa, anzi colla sua potētia ¹⁵⁷quasi il tutto avrà in potentia ¹⁵⁸di trasformare di suo essere ¹⁵⁹in vn altro.

〔De' navili che annegano.〕

¹⁶¹Vedrannosi grandissimi ¹⁶²corpi senza vita por¹⁶³tare con furia moltitu¹⁶⁴dine d'omini alla distrutti¹⁶⁵one di lor uita.

〔De' boi che si māgiano.〕

¹⁶⁷Māgieranno i padrō delle posses¹⁶⁸sioni i lor propi lauatoratori.

〔De' battere il letto per rifarlo.〕

¹⁷⁰Veranno li omini in tanta ingratitudine, ¹⁷¹che, chi darà loro albergo senza alcū prezzo, ¹⁷²sarà carico di bastonate, in modo che ¹⁷³gran parte delle interiora si spigerà¹⁷⁴no dal loco loro e s'andranno rivoltando pel ¹⁷⁵suo corpo.

〔Delle cose che si māgiano ¹⁷⁷che prima s'uccidono.〕

¹⁷⁸Sarà morto da loro il loro nutritore e flag¹⁷⁹giellato cō spietata morte.

〔Of Metals.〕

That shall be brought forth out of dark and obscure caves, which will put the whole human race in great anxiety, peril and death. To many that seek them, after many sorrows they will give delight, and to those who are not in their company, death with want and misfortune. This will lead to the commission of endless crimes; this will increase and persuade bad men to assassinations, robberies and treachery, and by reason of it each will be suspicious of his partner. This will deprive free cities of their happy condition; this will take away the lives of many; this will make men torment each other with many artifices deceptions and treasons. O monstrous creature! How much better would it be for men that every thing should return to Hell! For this the vast forests will be devastated of their trees; for this endless animals will lose their lives.

〔Of Fire.〕

One shall be born from small beginnings which will rapidly become vast. This will respect no created thing, rather will it, by its power, transform almost every thing from its own nature into another.

〔Of Ships which sink.〕

Huge bodies will be seen, devoid of life, carrying, in fierce haste, a multitude of men to the destruction of their lives.

〔Of Oxen, which are eaten.〕

The masters of estates will eat their own labourers.

〔Of beating Beds to renew them.〕

Men will be seen so deeply ungrateful that they will turn upon that which has harboured them, for nothing at all; they will so load it with blows that a great part of its inside will come out of its place, and will be turned over and over in its body.

〔Of Things which are eaten and which first are killed.〕

Those who nourish them will be killed by them and afflicted by merciless deaths.

¶ Dello spechiare le mura ¹⁸¹delle città nell'acqua de' lor fossi. ¶

¹⁸²Vedrannosi l'alte mvra delle grā città sotto sopra ne' lo ¹⁸³ro fossi.

¶ Dell'acqua che corre torbida ¹⁸⁵e mista cō terra, e della polue¹⁸⁶re e nebbia mista coll'aria, e del ¹⁸⁷foco misto col suo e altri cō ciascuo. ¶

¹⁸⁸Vedrassi tutti li elementi insieme misti con grā re¹⁸⁹volutione trascorrere ora inverso il centro del mō¹⁹⁰do, ora inverso il celo, e quādo dalle parti meri¹⁹¹dionali scorrere cō furia inverso il fred¹⁹²do settentrione, qualche volta dall'oriēte inverso ¹⁹³l'occidente, e così di questo in quell'altro emisperio.

¶ In ogni punto si può fare diuisio¹⁹⁵ne de' 2 emisperi. ¶

¹⁹⁶Li omini tutti scābieranno emisperio immediate.

¶ In ogni pūto è diuisione da o¹⁹⁸riente a occidente. ¶

¹⁹⁹Moverannosi tutti li animali da oriēte a occidente, e così ²⁰⁰da aquilone a meriggio scanbievolmēte, e così de' cōuerso.

¶ Del moto dell'acque che portano ²⁰²i legniami che son morti. ¶

²⁰³Corpi sanz'anima per se medesimi si moveranno e porterā ²⁰⁴cō seco innumerable generatione di morti, toglien²⁰⁵do le ricchezze a circūstanti viuēti.

¶ Dell'oua che sendo māgiate nō possono ²⁰⁷fare e pulcini. ¶

²⁰⁸O quanti fiē quegli, ai quali sarà proibito il nascere!

¶ De' pesci che si māgiano non nati. ¶

²¹⁰Infinita gieneratione si perderà per la morte delle grauide.

¶ Del piāto fatto il venerdì santo. ¶

²²⁰In tutte le parti d'Europa sarà piāto da grā popoli per la morte d'ū ²²¹solo omo morto in oriēte.

¶ Of the Reflection of Walls of Cities in the Water of their Ditches. ¶

The high walls of great cities will be seen up side down in their ditches.

¶ Of Water, which flows turbid and mixed with Soil and Dust; and of Mist, which is mixed with the Air; and of Fire which is mixed with its own, and each with each. ¶

All the elements will be seen mixed together in a great whirling mass, now borne towards the centre of the world, now towards the sky; and now furiously rushing from the South towards the frozen North, and sometimes from the East towards the West, and then again from this hemisphere to the other.

¶ The World may be divided into two Hemispheres at any Point. ¶

All men will suddenly be transferred into opposite hemispheres.

¶ The division of the East from the West may be made at any point. ¶

All living creatures will be moved from the East to the West; and in the same way from North to South, and vice versa.

¶ Of the Motion of Water which carries wood, which is dead. ¶

Bodies devoid of life will move by themselves and carry with them endless generations of the dead, taking the wealth from the bystanders.

¶ Of Eggs which being eaten cannot form Chickens. ¶

Oh! how many will they be that never come to the birth!

¶ Of Fishes which are eaten unborn. ¶

Endless generations will be lost by the death of the pregnant.

¶ Of the Lamentation on Good Friday. ¶

Throughout Europe there will be a lamentation of great nations over the death of one man who died in the East.

[[Del sogniare.]]

²²³Andranno li omini e nō si moveranno,
²²⁴parleranno cō chi nō si trova, senti²²⁵rāo
chi nō parla.

[[Dell'onbra che si move coll'uomo.]]

²²⁷Vedrannosi forme e figure d'uomini
²²⁸e d'animali, che seguiranno essi ani²²⁹mali
e omini dovunque fugiranno; ²³⁰e tal fia il
moto di lui qual è del²³¹l'altro, ma parrà
cosa mirabile delle ²³²varie grandezze in
che essi si tras²³³mutano.

[[Dell' ombra del sole e dello spechiarsi
²³⁵nell'acqua in un medesimo tēpo.]]

²³⁶Vedrassi molte volte l'uno uomo
²³⁷diuentare 3, e tutti lo seguo²³⁸no, e spesso
l'uno, il piv certo, l'abandona.

[[Delle casse che riseruanò ²⁴⁰molti
tesori.]]

²⁴¹Troverrassi dentro a de' noci e deli
alberi ²⁴²e altre piante tesori grādissimi, i
quali ²⁴³li stanno occulti e ben guardati.

[[Dello spegnere el lume a chi ²⁴⁵va al
letto.]]

²⁴⁶Molti per mandare fori il fiato ²⁴⁷con
troppa prestezza perderanno il ue²⁴⁸dere e
in brieue tutti i sentimēti.

[[Delle canpanelle de' muli ²⁵⁰che stanno
presso ai loro orecchi.]]

²⁵¹Sentirassi in molte parti dell'Europa
stru²⁵²mēti di uarie magnitudini far diuerse
²⁵³armonie con grandissime fatiche di chi
²⁵⁴piv presso l'ode.

[[Delli asini.]]

²⁵⁶Le molte fatiche saran remvnerate di
²⁵⁷fame, di sete, di disagio, e di mazzate, e
di pū²⁵⁸ture, e bestemie, e grā uillanie.

[[De' soldati a cauallo.]]

²⁶⁰Molti sarā veduti portati da grādi
ani²⁶¹mali con veloce corso alla ruina della
sua ²⁶²vita e prestissima morte.

²⁶³Per l'aria e per la terra saranno ve-
duti ani²⁶⁴mali di diuersi colori portarne cō
fu²⁶⁵rore li omini alla destrutione di lor vita.

[[Delle stelle delli sproni.]]

²⁶⁷Per causa delle stelle si uedranno li
omini ²⁶⁸esser velocissimi al pari di qua-
lūche ²⁶⁹animal ueloce.

[[Of Dreaming.]]

Men will walk and not stir, they will
talk to those who are not present, and hear
those who do not speak.

[[Of a Man's Shadow which moves with him.]]

Shapes and figures of men and animals
will be seen following these animals and men
wherever they flee. And exactly as the one
moves the other moves; but what seems so
wonderful is the variety of height they
assume.

[[Of our Shadow cast by the Sun, and our Reflec-
tion in the Water at one and the same time.]]

Many a time will one man be seen as
three and all three move together, and
often the most real one quits him.

[[Of wooden Chests which contain great
Treasures.]]

Within walnuts and trees and other plants
vast treasures will be found, which lie hidden
there and well guarded.

[[Of putting out the Light when going
to Bed.]]

Many persons puffing out a breath with
too much haste, will thereby lose their sight,
and soon after all consciousness.

[[Of the Bells of Mules, which are close to
their Ears.]]

In many parts of Europe instruments of
various sizes will be heard making divers har-
monies, with great labour to those who hear
them most closely.

[[Of Asses.]]

The severest labour will be repaid with
hunger and thirst, and discomfort, and blows,
and goadings, and curses, and great abuse.

[[Of Soldiers on horseback.]]

Many men will be seen carried by large
animals, swift of pace, to the loss of their
lives and immediate death.

In the air and on earth animals will be
seen of divers colours furiously carrying men
to the destruction of their lives.

[[Of the Stars of Spurs.]]

By the aid of the stars men will be seen
who will be as swift as any swift animal.

[[Il bastone ch'è morto.]]

²⁷¹Il movimēto de' morti farà fugire
²⁷²cō dolore e piāto e cō grida molti
viui.

[[Dell' esca.]]

²⁷⁴Cō pietra e con ferro si rende²⁷⁵ranno
visibili le cose che prima nō ²⁷⁶si vedeano.

[[Of a Stick, which is dead.]]

The motions of a dead thing will make
many living ones flee with pain and lamen-
tation and cries.

[[Of Tinder.]]

With a stone and with iron things will
be made visible which before were not seen.

C. A. 362 b; 1134 b]

1296.

[[Del navigare.]]

²Vedrassi li alberi delle grā selue
di Taurus, ³e di Sinai, Apenino, e Atlante
scorrere per l'aria ⁴da oriēte a occidēte, da
aquilone a meridiē, e porteranno per l'aria
grā moltitudine ⁶d'omini; o quāti voti! o
quāti mor⁷ti! o quanta seperatiō d'amici e di
parēti! o quā⁸ti fiē quelli che nō rivedranno
più le lor pro⁹vincie nè le lor patrie, e che
moriranno senza se¹⁰poltura colle lor ossa
sparse in diuersi ¹¹siti del mōdo!

[[Dello sgomberare l'ogni santi.]]

¹³Molti abandoneranno le proprie abita-
zioni, e por¹⁴terā cō seco tutti e sua valsenti,
e andran¹⁵no abitare in altri paesi.

[[Del di de' morti.]]

¹⁷E quāti fiē quelli che piāgeranno i
lor ¹⁸antichi morti portādo lumi a quelli.

[[De' frati che spēdendo parole; ²⁰riceuono
di grā ricchezze e danno ²¹il paradiso.]]

²⁴¶ Le invisibili monete farà triōfare
molti spē²⁵ditori di quelle. ¶

[[Degli archi fatti ²⁷colli corni de' boi.]]

²⁸Molti fiē quelli che per causa delle
bouine cor²⁹na moriranno di dolente morte.

[[Dello scriver lettere da un ³¹paese a vn
altro.]]

³²Parleransi li uomini di remotissimi paesi
l'uno all'altro e rispōderāsi.

[[Degli emisperi che sono infiniti ³⁴e da
infinite linie son diuisi, in mo³⁵do che senpre
ciascuno uomo n'ā ³⁶vna d'esse linie infra
l'ū de' piedi e l'altro.]]

³⁷Parleransi e coccheransi e abbracceransi
si li omni stanti da l'uno al³⁸altro emisperio,
e tenderansi i loro linguaggi.

[[Of going in Ships.]]

We shall see the trees of the great forests
of Taurus and of Sinai and of the Appenines
and others, rush by means of the air, from
East to West and from North to South; and
carry, by means of the air, great multi-
tudes of men. Oh! how many vows!
Oh! how many deaths! Oh! how many
partings of friends and relations! Oh! how
many will those be who will never again
see their own country nor their native land,
and who will die unburied, with their bones
strewn in various parts of the world!

[[Of moving on All Saints' Day.]]

Many will forsake their own dwellings
and carry with them all their belongings and
will go to live in other parts.

[[Of All Souls' Day.]]

How many will they be who will bewail
their deceased forefathers, carrying lights
to them.

[[Of Friars, who spending nothing but words,
receive great gifts and bestow Paradise.]]

Invisible money will procure the triumph
of many who will spend it.

[[Of Bows made of the Horns of Oxen.]]

Many will there be who will die a painful
death by means of the horns of cattle.

[[Of writing Letters from one Country to
another.]]

Men will speak with each other from
the most remote countries, and reply.

[[Of Hemispheres, which are infinite; and
which are divided by an infinite number of
Lines, so that every Man always has one of
these Lines between his Feet.]]

Men standing in opposite hemispheres will
converse and deride each other and embrace each
other, and understand each other's language.

[(Delle doti delle fanciulle.)]

⁷¹E doue prima la gioventù feminina nō si potea difendere dal⁷²la lussuria e rapina de' maschi, nè per guardie di parenti nè fortezze di mvra, ⁷³verrà tempo che bisognerà che padri e parēti d'esse fanciulle ⁷⁴le paghino di grā prezzi chi voglia dormire con loro, ancorachè es⁷⁵se sien ricche, nobili, e bellissime; cierto è, par qui che la ⁷⁶natura voglia spegnere la umana spetie come cosa invtile al mondo, ⁷⁷e guastatrice di tutte le cose create.

[(Della crudeltà dell'omo.)]

⁷⁹Vedrannosi animali sopra della terra, i quali senpre combatteranno infra ⁸⁰loro e

[(Of Priests who say Mass.)]

There will be many men who, when they go to their labour will put on the richest clothes, and these will be made after the fashion of aprons [petticoats].

[(Of Friars who are Confessors.)]

And unhappy women will, of their own free will, reveal to men all their sins and shameful and most secret deeds.

[(Of Churches and the Habitations of Friars.)]

Many will there be who will give up work and labour and poverty of life and goods, and will go to live among wealth in splendid buildings, declaring that this is the way to make themselves acceptable to God.

[(Of Selling Paradise.)]

An infinite number of men will sell publicly and unhindered things of the very highest price, without leave from the Master of it; while it never was theirs nor in their power; and human justice will not prevent it.

[(Of the Dead which are carried to be buried.)]

The simple folks will carry vast quantities of lights to light up the road for those who have entirely lost the power of sight.

[(Of Dowries for Maidens.)]

And whereas, at first, maidens could not be protected against the violence of Men, neither by the watchfulness of parents nor by strong walls, the time will come when the fathers and parents of those girls will pay a large price to a man who wants to marry them, even if they are rich, noble and most handsome. Certainly this seems as though nature wished to eradicate the human race as being useless to the world, and as spoiling all created things.

[(Of the Cruelty of Man.)]

Animals will be seen on the earth who will always be fighting against each other

con danni grandissimi e spesso morte di ciascuna delle ⁸¹parti; questi non avrā termine nelle lor malignità; per le fiere mē⁸²bra di questi uerranno a terra grā parte delli alberi delle gran selue dell'u⁸³niverso, e poi ch'essi avranno pasciuto, il nutrimento de' loro desiderii sa⁸⁴rā, di dar morte e affanno e fatiche e guerre e furie a qualche cosa animata; e per la loro smisurata superbia questi si vor⁸⁵ranno leuare inverso il cielo, ma la superchia gravezza delle lor membra gli porrā ⁸⁶in basso; nulla cosa resterà sopra la terra o sotto la terra e l'acqua che nō ⁸⁷sia perseguitata, remossa o guasta, e quella dell'ū paese remossa nell'altro; ⁸⁸e 'l corpo di questi si farà sepultura e transito di tutti i già da lor morti cor⁸⁹pi animati; o mōdo, come è che nō t'apri a precipitarlo nell' alte fessure de' tua ⁹⁰grā baratri e spelonche, e non mostrare più al cielo si crudele e spie⁹¹tato mōstro!

with the greatest loss and frequent deaths on each side. And there will be no end to their malignity; by their strong limbs we shall see a great portion of the trees of the vast forests laid low throughout the universe; and, when they are filled with food the satisfaction of their desires will be to deal death and grief and labour and wars and fury to every living thing; and from their immoderate pride they will desire to rise towards heaven, but the too great weight of their limbs will keep them down. Nothing will remain on earth, or under the earth or in the waters which will not be persecuted, disturbed and spoiled, and those of one country removed into another. And their bodies will become the sepulture and means of transit of all they have killed.

O Earth! why dost thou not open and engulf them in the fissures of thy vast abyss and caverns, and no longer display in the sight of heaven such a cruel and horrible monster.

Br. M. 42 6]

1297.

PROFETIE.

²Molte fien quelle che cresce³rā nelle lor ruine.

¶ La palla della neue ⁵rotolādo sopra la ⁶neue. ¶

⁷Molta turba fie quella ⁸che, dimēticato loro esse⁹re e nome, staran come ¹⁰morti sopra le spoglie ¹¹deli altri morti.

¶ Il dormire sopra ¹³le piume dell'uccelli. ¶

¹⁴Vedrannosi le parti oriēta¹⁵li discorrere ¹⁶nell'occidentali e le me¹⁷ridionali in settentri¹⁸one, avviluppando¹⁹si per l'universo con grande ²⁰strepito e tremore o furore.

¶ Il uento d'oriēte che ²²scorreua in ponente. ¶

²³I razzi solari accende²⁴rāno il foco in te²⁵rra coll' quale s'in²⁶focherà ciò ch'è sotto ²⁷il cielo, e ripercossi ²⁸nel suo inpedimē²⁹to ritorneranno ³⁰in basso.

¶ Lo spechio cavo ³²acciēde il foco, col ³³quale si scalda il ³⁴forno che à il fō³⁵do che sta sotto il suo ³⁶cielo. ¶

PROPHECIES.

There will be many which will increase in their destruction.

¶ The Ball of Snow rolling over Snow. ¶

There will be many who, forgetting their existence and their name, will lie as dead on the spoils of other dead creatures.

¶ Sleeping on the Feathers of Birds. ¶

The East will be seen to rush to the West and the South to the North in confusion round and about the universe, with great noise and trembling or fury.

¶ In the East wind which rushes to the West. ¶

The solar rays will kindle fire on the earth, by which a thing that is under the sky will be set on fire, and, being reflected by some obstacle, it will bend downwards.

¶ The Concave Mirror kindles a Fire, with which we heat the oven, and this has its foundation beneath its roof. ¶

³⁷Gran parte del mare ³⁸si fuggirà in-
verso il ³⁹cielo e per molto tēpo nō fa-
⁴⁰rà ritorno; (Cioè pe' nuvoli.)

⁴¹Restaci il moto che separa ⁴²il mo-
tore dal mobile.

⁴³Sarà annegato chi fa il lume ⁴⁴al culto
diuino. || (Le ape che ⁴⁵faño la cera delle
candele.)

⁴⁶I morti uscirāno di sotto terra ⁴⁷e
coi loro fieri mouimēti cac⁴⁸cieranno dal
mondo innumera⁴⁹bili creature umane.

(Il ferro uscito di sot⁵⁰to terra è morto,
⁵²e se ne fa l'arme che ⁵³ammorti tanti
uomini.)

⁵⁴Le grandissime montagne ⁵⁶ācorachè
sieno remo⁵⁷te da marini liti, scaccieraño
⁵⁸il mare dal suo sito.

(Questo sono li fiumi ⁶⁰che portano le
terre, ⁶¹da loro leuate dalle mō⁶²tagne, e le
scarica⁶³no ai marini liti, ⁶⁴e doue entra
⁶⁵la terra si fuggie il ⁶⁶mare.)

⁶⁷L'acqua caduta dai nuvoli ancora in
moto sopra le spiagge de' mōti si ferme-
⁶⁸rà per lūgo spatio di tempo senza ⁶⁹fare
alcū moto, e questo accade⁷⁰rà in molte e
diuerse provincie.

(La neve che fiocca ⁷²che è acqua.)

⁷³I gran sassi de' monti gitterā ⁷⁴fuoco
tale che brucieranno il le⁷⁵gnome di molte
e grādissime selue ⁷⁶e molte fere saluatiche
e dimestiche.

(La pietra del fucile, ⁷⁸che fa foco che
consu⁷⁹ma tutte le some del⁸⁰le legnie con
che si ⁸¹disfā le selve; ⁸²E cuocierassi con
esse ⁸³la carne delle bestie.)

⁸⁴O quanti grandi ediftj fieno ruinati
⁸⁵per causa del fuoco!

(Del fuoco delle bonbarde.)

⁸⁷I buoi fieno in gran parte cavsa delle
ruine ⁸⁸delle città, e similmēte cavalli e
bufoli

(Tirā le bonbarde.)

A great part of the sea will fly towards
heaven and for a long time will not return.
(That is, in Clouds.)

There remains the motion which divides
the mover from the thing moved.

Those who give light for divine service
will be destroyed. (The Bees which make
the Wax for Candles.)

Dead things will come from underground
and by their fierce movements will send
numberless human beings out of the world.

(Iron, which comes from under ground is
dead but the Weapons are made of it which
kill so many Men.)

The greatest mountains, even those which
are remote from the sea shore, will drive the
sea from its place.

(This is by Rivers which carry the Earth
they wash away from the Mountains and bear
it to the Sea-shore; and where the Earth
comes the sea must retire.)

The water dropped from the clouds still
in motion on the flanks of mountains will lie
still for a long period of time without any
motion whatever; and this will happen in
many and divers lands.

(Snow, which falls in flakes and is Water.)

The great rocks of the mountains will
throw out fire; so that they will burn the
timber of many vast forests, and many beasts
both wild and tame.

(The Flint in the Tinder-box which makes
a Fire that consumes all the loads of Wood
of which the Forests are despoiled and with
this the flesh of Beasts is cooked.)

Oh! how many great buildings will be
ruined by reason of Fire.

(The Fire of great Guns.)

Oxen will be to a great extent the cause
of the destruction of cities, and in the same
way horses and buffaloes

I.2 15a]

1298.

¶ Vedrassi la spetie leonina · colle unghiate ²branche aprire la terra · e nelle fatte ³spelonche · seppellire · se insieme co⁴li altri animali a se sottoposti. ¶

¶ ⁵Usciranno dalla terra · animali · vestiti di tenebre, ⁶i quali con maravigliosi assalti ⁷assaliranno l'umana generatione, e quella ⁸da feroci morsi · fia con confusion di sã⁹gue da essi · diuorata. ¶

¹⁰Acora scorrerà per l'aria · la nefada spetie volatile, ¹¹la quale · assalirà · li omini e li a¹²nimali, e di quelli si ciberanno cõ grã ¹³gridore; empierãno i loro vëtri di vermiglio sange.

The Lion tribe will be seen tearing open the earth with their clawed paws and in the caves thus made, burying themselves together with the other animals that are beneath them.

Animals will come forth from the earth in gloomy vesture, which will attack the human species with astonishing assaults, and which by their ferocious bites will make confusion of blood among those they devour.

Again the air will be filled with a mischievous winged race which will assail men and beasts and feed upon them with much noise—filling themselves with scarlet blood.

I.2 15b]

1299.

Vedrassi il sange uscire dalle · stracciate carni, ²rigare le superfitali parti delli omini;

¶ ³Verrà alli omini · tal crudele mala⁴tia, che colle propie vnghie · si straccieranno le loro carni ¶ (sarà la rognia; D) ¶

¶ ⁶Vedrannosi le piãte rimanere senza foglie, ⁷e i fiumi fermare i loro corsi; ¶

¶ ⁸L'acqua del mare si leuerà sopra l'alte cime de' mōti ⁹verso il cielo, e ricaderà sopra alle a¹⁰bitationi delli omini ¶ (ciòè per nuvoli; D) ¶

¶ ¹¹Vedrannosi i maggiori alberi delle selue essere ¹²portati dal furor de' venti dall'oriète ¹³all'occidente ¶ (ciòè per mare; D) ¶

¶ ¹⁴Li omini gitterãno via le propie vetovaglie ¶ (ciòè seminãdo. D) ¶

Blood will be seen issuing from the torn flesh of men, and trickling down the surface.

Men will have such cruel maladies that they will tear their flesh with their own nails. (The Itch. D)

Plants will be seen left without leaves, and the rivers standing still in their channels.

The waters of the sea will rise above the high peaks of the mountains towards heaven and fall again on to the dwellings of men. (That is, in Clouds. D)

The largest trees of the forest will be seen carried by the fury of the winds from East to West. (That is across the Sea. D)

Men will cast away their own victuals. (That is, in Sowing. D)

I.2 26a]

1300.

¶ Verrà a tale la gieneratione vmana ²che nō si intēderà il parlare · l'uno dell'altro; ³ciòè un tedesco con un turco. ¶

¶ ⁴Vedrassi ai padri donare le lor figliole ⁵a lussuria · delli omini e premiare e abbãdonare ogni ⁶passata guardia ¶ (quãdo si maritano le putte. D) ¶

¶ ⁷Usciranno li omini dalle sepulture cõuertiti ⁸in vcelli ·, e assaliranno li altri omini togliendo ⁹loro il cibo dalle propie mani e mēse ¶ (le mosche. D) ¶

Human beings will be seen who will not understand each other's speech; that is, a German with a Turk.

Fathers will be seen giving their daughters into the power of man and giving up all their former care in guarding them. (When Girls are married. D)

Men will come out their graves turned into flying creatures; and they will attack other men, taking their food from their very hand or table. (As Flies. D)

I.2 17 b]

1303.

〔De' noci battuti.〕

²Quelli che avranno fatto meglio, saranno ³piv battuti e i sua figlioli tolti ⁴e scorticati ovvero spogliati e rotte e fra⁵casate le sue ossa.

〔Delle sculture.〕

⁷Oimè, che vedo il salvatore di novo crocifisso.

〔Della bocca dell'omo ch'è sepoltura.〕

⁹Usciranno grā romori dalle sepulture di ¹⁰quelli che sō finiti da cattiva e uiolēte morte.

〔Delle pelli delli animali ¹²che tengono il senso del tatto ¹³che v'è sulle scritte.〕

¹⁴Quāto piv si parlerà colle pelli, veste del ¹⁵sentimento, tanto piv s'acquisterà sapiētia.

〔De' preti che tengono l'ostia ¹⁷in corpo.〕

¹⁸Allora tutti quasi i tabernaculi dove sta il ¹⁹corpus domini si vedrāno manifestamēte ²⁰per se stessi andare per diuerse strade del mōdo.

〔Of Walnut trees, that are beaten.〕

Those which have done best will be most beaten, and their offspring taken and flayed or peeled, and their bones broken or crushed.

〔Of Sculpture.〕

Alas! what do I see? The Saviour crucified anew.

〔Of the Mouth of Man, which is a Sepulchre.〕

Great noise will issue from the sepulchres of those who died evil and violent deaths.

〔Of the Skins of Animals which have the sense of feeling what is in the things written.〕

The more you converse with skins covered with sentiments, the more wisdom will you acquire.

〔Of Priests who bear the Host in their body.〕

Then almost all the tabernacles in which dwells the Corpus Domini, will be plainly seen walking about of themselves on the various roads of the world.

I.2 18 a]

1304.

¶E quelli che pascono l'erbe ²farā della notte ³giorno; ||〔sevo.〕¶

¶E molti terrestri e acquatici ⁵animali mōterāno fralle ⁶stelle; |〔cioè pianeti.〕¶

¶Vedrassi i morti portare ⁸i vivi; ||〔i carri e navi in diuerse parti.〕¶

¹⁰A molti fia tolto il cibo di bocca;〔Ai forni.〕

¶¹²E quelli che si inboccheranno, per l'altrui ¹³mani fia lor tolto il cibo di bocca;〔il forno.〕¶

And those who feed on grass will turn night into day〔Tallow.〕

And many creatures of land and water will go up among the stars〔that is Planets.〕

The dead will be seen carrying the living〔in Carts and Ships in various places.〕

Food shall be taken out of the mouth of many〔the oven's mouth.〕

And those which will have their food in their mouth will be deprived of it by the hands of others〔the oven.〕

I.2 18 b]

1305.

〔De' crocifissi vĕduti.〕

²Io vedo di novo vĕduto e crocifisso Cristo ³e marterizzare i sua sātī.

〔I medici che uiuono de' malati.〕

⁵Verrāno li omini in tanta viltà, che avrā di grā⁶tia, che altri triōfino sopra i loro mali ⁷ovvero della perduta lor uera ricchezza, cioè la sanità.

〔Of Crucifixes which are sold.〕

I see Christ sold and crucified afresh, and his Saints suffering Martyrdom.

〔Of Physicians, who live by sickness.〕

Men will come into so wretched a plight that they will be glad that others will derive profit from their sufferings or from the loss of their real wealth, that is health.

1330.

PERCHÈ LI CANI ODORÀ VOLENTIERI IL CULO
L'UNO AL'ALTRO.

Questo animale à in odio i po³veri, perchè e' māgiano tristi cibi, e ama li richi, ⁴perchè essi àn' bone vivāde e massime di car⁵ne; E lo sterco delli animali senpre ri⁶tiene della virtù della sua origine, come mo⁷strano le feccie

¹⁰Ora i cani àno si sottilissimo odo¹¹rato che col naso sentono la uirtù rima¹²sta in tali feccie; e che sie uero, se le trovā ¹³per le strade odorano, e se vi sentono dentro ¹⁴virtù di carne o d'altro, essi le pigliano, e ¹⁵se nò, le lasciano; e per tornare al quesito di¹⁶co, che se conoscono il cane mediante tali ¹⁷odori essere ben pasciuto, essi lo riguar¹⁸dano, perchè stimano quello avere potēte e ricco pa¹⁹drone, e se nò sentono tale odore cō uirtù, essi sti²⁰mano tal cane essere da poco, e avere povero ²¹e tristo padrone, e però mordono tali cani come fare²²bbero il suo padrone.

WHY DOGS TAKE PLEASURE IN SMELLING AT
EACH OTHER.

This animal has a horror of the poor, because they eat poor food, and it loves the rich, because they have good living and especially meat. And the excrement of animals always retains some virtue of its origin as is shown by the faeces.

Now dogs have so keen a smell, that they can discern by their nose the virtue remaining in these faeces, and if they find them in the streets, smell them and if they smell in them the virtue of meat or of other things, they take them, and if not, they leave them: And to return to the question, I say that if by means of this smell they know that dog to be well fed, they respect him, because they judge that he has a powerful and rich master; and if they discover no such smell with the virtue of meat, they judge that dog to be of small account and to have a poor and humble master, and therefore they bite that dog as they would his master.

C. A. 68 b; 203 b]

1331.

Sono li moti della terra ²circulari assai vtili, ³cōciosiachè mai li o⁴mini si fermano; e fa⁵si in piv modi, de' qua⁶li nell'uno li omini por⁷tano la terra in spal⁸la, l'altro, colli bau⁹li, e altri col carret¹⁰to; Quel che la porta ¹¹in spalla si fa prima ¹²enpiere il uassoio in ter¹³ra, e perde tēpo a metterselo ¹⁴in spalla; Quel dello bau¹⁵le non perde tempo.

The circular plans of carrying earth are very useful, inasmuch as men never stop in their work; and it is done in many ways. By one of these ways men carry the earth on their shoulders, by another in chests and others on wheelbarrows. The man who carries it on his shoulders first fills the tub on the ground, and he loses time in hoisting it on to his shoulders. He with the chests loses no time.

Tr. 2.]

1332.

Se'l Petrarca amò si forte il lauro, ²fu perch'egli è buon fralla salsiccia e tonno; ³io nò posso di lor ciancie far tesauro.

If Petrarch was so fond of bay, it was because it is of a good taste in sausages and with tunny; I cannot put any value on their foolery.

Letters. Personal Records. Dated Notes.

When we consider how superficial and imperfect are the accounts of Leonardo's life written some time after his death by Vasari and others, any notes or letters which can throw more light on his personal circumstances cannot fail to be in the highest degree interesting. The texts here given as Nos. 1351—1353, set his residence in Rome in quite a new aspect; nay, the picture which irresistibly dwells in our minds after reading these details of his life in the Vatican, forms a striking contrast to the contemporary life of Raphael at Rome.

I have placed foremost of these documents the very remarkable letters to the Desterdar of Syria. In these Leonardo speaks of himself as having staid among the mountains of Armenia, and as the biographies of the master tell nothing of any such distant journeys, it would seem most obvious to treat this passage as fiction, and so spare ourselves the onus of proof and discussion. But on close examination no one can doubt that these documents, with the accompanying sketches, are the work of Leonardo's own hand. Not merely is the character of the handwriting his, but the spelling and the language are his also. In one respect only does the writing betray any marked deviation from the rest of the notes, especially those treating on scientific questions; namely, in these observations he seems to have taken particular pains to give the most distinct and best form of expression to all he had to say; we find erasures and emendations in almost every line. He proceeded, as we shall see, in the same way in the sketches for letters to Giuliano de' Medici, and what can be more natural, I may ask, than to find the draft of a letter thus altered and improved when it is to contain an account of a definite subject, and when personal interests are in the scale? The finished copies as sent off are not known to exist; if we had these instead of the rough drafts, we might unhesi-

tatingly have declared that some unknown Italian engineer must have been, at that time, engaged in Armenia in the service of the Egyptian Sultan, and that Leonardo had copied his documents. Under this hypothesis however we should have to state that this unknown writer must have been so far one in mind with Leonardo as to use the same style of language and even the same lines of thought. This explanation might—as I say—have been possible, if only we had the finished letters. But why should these rough drafts of letters be regarded as anything else than what they actually and obviously are? If Leonardo had been a man of our own time, we might perhaps have attempted to account for the facts by saying that Leonardo, without having been in the East himself, might have undertaken to write a Romance of which the scene was laid in Armenia, and at the desire of his publisher had made sketches of landscape to illustrate the text.

I feel bound to mention this singular hypothesis as it has actually been put forward (see No. 1336 note 5); and it would certainly seem as though there were no other possible way of evading the conclusion to which these letters point, and their bearing on the life of the master,—absurd as the alternative is. But, if, on a question of such importance, we are justified in suggesting theories that have no foundation in probability, I could suggest another which, as compared with that of a Fiction by Leonardo, would be neither more nor less plausible; it is, moreover the only other hypothesis, perhaps, which can be devised to account for these passages, if it were possible to prove that the interpretation that the documents themselves suggest, must be rejected *a priori*; viz may not Leonardo have written them with the intention of mystifying those who, after his death, should try to decipher these manuscripts with a view to publishing them? But if, in fact, no objection that will stand the test of criticism can be brought against the simple and direct interpretation of the words as they stand, we are bound to regard Leonardo's travels in the East as an established fact. There is, I believe nothing in what we know of his biography to negative such a fact, especially as the details of his life for some few years are wholly unknown; nor need we be at a loss for evidence which may serve to explain—at any rate to some extent—the strangeness of his undertaking such a journey. We have no information as to Leonardo's history between 1482 and 1486; it cannot be proved that he was either in Milan or in Florence. On the other hand the tenor of this letter does not require us to assume a longer absence than a year or two. For, even if his appointment (*offitio*) as Engineer in Syria had been a permanent one, it might have become untenable—by the death perhaps of the *Defterdar*, his patron, or by his removal from office—, and Leonardo on his return home may have kept silence on the subject of an episode which probably had ended in failure and disappointment.

From the text of No. 1379 we can hardly doubt that Leonardo intended to make an excursion secretly from Rome to Naples, although so far as has hitherto been known, his biographers never allude to it. In another place (No. 1077) he says that he had worked as an Engineer in Friuli. Are we to doubt this statement too, merely because no biographer has hitherto given us any information on the matter? In the geographical notes Leonardo frequently speaks of the East, and though such passages

afford no direct proof of his having been there, they show beyond a doubt that, next to the Nile, the Euphrates, the Tigris and the Taurus mountains had a special interest in his eyes. As a still further proof of the futility of the argument that there is nothing in his drawings to show that he had travelled in the East, we find on Pl. CXX a study of oriental heads of Armenian type,—though of course this may have been made in Italy.

If the style of these letters were less sober, and the expressions less strictly to the point throughout, it might be possible to regard them as a romantic fiction instead of a narrative of fact. Nay, we have only to compare them with such obviously fanciful passages as No. 1354, Nos. 670—673, and the Fables and Prophecies. It is unnecessary to discuss the subject any further here; such explanations as the letter needs are given in the foot notes.

The drafts of letters to Lodovico il Moro are very remarkable. Leonardo and this prince were certainly far less closely connected, than has hitherto been supposed. It is impossible that Leonardo can have remained so long in the service of this prince, because the salary was good, as is commonly stated. On the contrary, it would seem, that what kept him there, in spite of his sore need of the money owed him by the prince, was the hope of some day being able to carry out the project of casting the 'gran cavallo'.

1336. Lines 1—52 are reproduced in facsimile
on Pl. CXVI.

1. *Diodario*. This word is not to be found in any Italian dictionary, and for a long time I vainly sought an explanation of it. The youthful reminiscences of my wife afforded the desired clue. The chief town of each Turkish Villayet, or province—such as Broussa, for instance, in Asia Minor, is the residence of a Defterdar, who presides over the financial affairs of the province. *Defterdar hane* was, in former times, the name given to the Ministry of Finance at Constantinople; the Minister of Finance to the Porte is now known as the *Malliè-Nazri* and the *Defterdars* are his subordinates. A *Defterdar*, at the present day is merely the head of the finance department in each Provincial district. With regard to my suggestion that Leonardo's *Diodario* might be identical with the Defterdar of former times, the late M. C. DEFRÉMERIE, Arabic Professor, and Membre de l'Institut de France wrote to me as follows: *Votre conjecture est parfaitement fondée; diodario est l'équivalent de dévadar ou plus exactement dévâdâr, titre d'une importante dignité en Egypte, sous les Mamlouks.*

The word however is not of Turkish, but of Perso-Arabic derivation. دفتر دار, دواة دار literally *Defter* (Arabic) meaning *folio*; for *dar* (Persian) Book-keeper or holder is the English equivalent; and the idea is that of a deputy in command. During

the Mamelook supremacy over Syria, which corresponded in date with Leonardo's time, the office of Defterdar was the third in importance in the State.

Soltano di Babilonia. The name of Babylon was commonly applied to Cairo in the middle ages. For instance BREIDENBACH, *Itinerarium Hierosolyma* p. 218 says: "At last we reached Babylon. But this is not that Babylon which stood on the further shore of the river Chober, but that which is called the Egyptian Babylon. It is close by Cairo and the twain are but one and not two towns; one half is called Cairo and the other Babylon, whence they are called together Cairo-Babylon; originally the town is said to have been named Memphis and then Babylon, but now it is called Cairo." Compare No. 1085, 6.

Egypt was governed from 1382 till 1517 by the Borgite or Tcherkessian dynasty of the Mamelook Sultans. One of the most famous of these, Sultan Kaït Bey, ruled from 1468—1496 during whose reign the Gama (or Mosque) of Kaït Bey and tomb of Kaït Bey near the Okella Kaït Bey were erected in Cairo, which preserve his name to this day. Under the rule of this great and wise prince many foreigners, particularly Italians, found occupation in Egypt, as may be seen in the 'Viaggio di Josaphat Barbaro', among other travellers. "Next to Leonardo (so I learn from Prof. Jac. Burckhardt of Bâle) Kaït Bey's most helpful engineer was a German

quale [ere] sō cierto" che . . atte mattutto . . dara. 4. terrore [e ca] il . . causa [e du]. 5. dare | "con amore essollecitudine" opera ac quello [pe] vftio . . mādasstī. 6. parte [chontingne ne a noi] che . . pareano | "esser" piv . . nostro. 7. cita

who in about 1487 superintended the construction of the Mole at Alexandria. Felix Fabii knew him and mentions him in his *Historia Suevorum*, written in 1488."

3. *Il nuovo accidente accaduto*, or as Leonardo first wrote and then erased, è *accaduto un nuovo accidente*. From the sequel this must refer to an earthquake, and indeed these were frequent at that period, particularly in Asia Minor, where they caused immense mischief. See No. 1101 note.

4. The text here breaks off. The following lines are a fresh beginning of a letter, evidently addressed to the same person, but, as it would seem, written at a later date than the previous text. The numerous corrections and amendments amply prove that it is not a copy from any account of a journey by some unknown person; but, on the contrary, that Leonardo was particularly anxious to choose such words and phrases as might best express his own ideas.

5. *Parti d'Erminia*. See No. 945, note. The extent of Armenia in Leonardo's time is only approximately known. In the XVth century the Persians governed the Eastern, and the Arabs the Southern portions. Arabic authors—as, for instance Abulfeda—include Cilicia and a part of Cappadocia in Armenia, and Greater Armenia was the tract of that country known later as Turcomania, while Armenia Minor was the territory between Cappadocia and the Euphrates. It was not till 1522, or even 1574 that the whole country came under the dominion of the Ottoman Turks, in the reign of Selim I.

The Mamelook Sultans of Egypt seem to have taken a particular interest in this, the most Northern province of their empire, which was even then in danger of being conquered by the Turks. In the autumn of 1477 Sultan Kaït Bey made a journey of inspection, visiting Antioch and the valleys of the Tigris and Euphrates with a numerous and brilliant escort. This tour is briefly alluded to by *Moodshireddin* p. 561; and by WEIL, *Geschichte der Abbasiden* V, p. 358. An anonymous member of the suite wrote a diary of the expedition in Arabic, which has been published by R. V. LONZONE (*Viaggio in Palestina e Soria di Kaïd Ba XVIII sultano della II dinastia*

mamelucca, fatto nel 1477. Testo arabo. Torino 1878, without notes or commentary). Compare the critique on this edition, by J. GILDEMEISTER in *Zeitschrift des Deutschen Palaestina Vereins* (Vol. III p. 246—249). Lanzone's edition seems to be no more than an abridged copy of the original. I owe to Professor Schéfer, Membre de l'Institut, the information that he is in possession of a manuscript in which the text is fuller, and more correctly given. The Mamelook dynasty was, as is well known, of Circassian origin, and a large proportion of the Egyptian Army was recruited in Circassia even so late as in the XVth century. That was a period of political storms in Syria and Asia Minor and it is easy to suppose that the Sultan's minister, to whom Leonardo addresses his report as his superior, had a special interest in the welfare of those frontier provinces. Only to mention a few historical events of Sultan Kaït Bey's reign, we find that in 1488 he assisted the Circassians to resist the encroachments of Alaeddoulet, an Asiatic prince who had allied himself with the Osmanli to threaten the province; the consequence was a war in Cilicia by sea and land, which broke out in the following year between the contending powers. Only a few years earlier the same province had been the scene of the so-called Caramenian war in which the united Venetian, Neapolitan and Slavonic fleets had been engaged. (See CORIALANO CIPPICO, *Della guerra dei Veneziani nell'Asia dal 1469—1474*. Venezia 1796, p. 54) and we learn incidentally that a certain Leonardo Boldo, Governor of Scutari under Sultan Mahmoud,—as his name would indicate, one of the numerous renegades of Italian birth—played an important part in the negotiations for peace.

Tu mi mandasti. The address *tu* to a personage so high in office is singular and suggests personal intimacy; Leonardo seems to have been a favourite with the Diodario. Compare lines 54 and 55.

I have endeavoured to show, and I believe that I am also in a position to prove with regard to these texts, that they are draughts of letters actually written by Leonardo; at the same time I must not omit to mention that shortly after I had discovered

nostro, entrai nella città di Calindra, vicina ai nostri confini; questa città è posta nelle spiagge di quella parte del mōte Tavro, che è divisa dall' Eufrates e riguarda i corni del grā Mōte Tavro per ponēte; Questi corni son di tanta altura che par che tocchino il cielo, chē nell' universo non è parte terre¹⁰stre piv alta della sua cima; e senpre 4 ore inanzi di è per-

the city of Calindra[7], near to our frontiers. This city is situated at the base of that part of the Taurus mountains which is divided from the Euphrates and looks towards the peaks of the great Mount Taurus[8] to the West[9]. These peaks are of such a height that they seem to touch the sky, and in all the world there is no part of the earth, higher than its summit[10], and the rays of

di chalindra . . confini [e] questa . . ispiegge [del m] di quel. 8. divisa [dal lago] dalleufrates [essa per le] e riguarda i [grā] corni del "grā". 9. altura [che lo per me non credo] "che par chettochino il celo" che nell universo [sia] "none" parte. 10. ste piv al della . . essenpre . . di [allu] e perchossa . . sole [che allei si mostra]. 11. lesere . . petra biāchissima

these texts in the Codex Atlanticus and published a paper on the subject in the *Zeitschrift für bildende Kunst* (Vol. XVI), Prof. Govi put forward this hypothesis to account for their origin:

"Quanto alle notizie sul monte Tauro, sull'Armenia e sull'Asia minore che si contengono negli altri frammenti, esse vennero prese da qualche geografo o viaggiatore contemporaneo. Dall'indice imperfetto che accompagna quei frammenti, si potrebbe dedurre che Leonardo volesse farne un libro, che poi non venne compiuto. A ogni modo, non è possibile di trovare in questi brani nessun indizio di un viaggio di Leonardo in oriente, nè della sua conversione alla religione di Maometto, come qualcuno pretenderebbe. Leonardo amava con passione gli studi geografici, e nei suoi scritti s'incontran spesso itinerari, indicazioni, o descrizioni di luoghi, schizzi di carte e abbozzi topografici di varie regioni, non è quindi strano che egli, abile narratore com'era, si fosse proposto di scrivere una specie di romanzo in forma epistolare svolgendone l'intreccio nell'Asia Minore, intorno alla quale i libri d'allora, e forse qualche viaggiatore amico suo, gli avevano somministrato alcuni elementi più o meno fantastici. (See *Transunti della Reale Accademia dei Lincei* Vol. V Ser. 3).

It is hardly necessary to point out that Prof. Govi omits to name the sources from which Leonardo could be supposed to have drawn his information, and I may leave it to the reader to pronounce judgment on the anomaly which is involved in the hypothesis that we have here a fragment of a Romance, cast in the form of a correspondence. At the same time, I cannot but admit that the solution of the difficulties proposed by Prof. Govi is, under the circumstances, certainly the easiest way of dealing with the question. But we should then be equally justified in supposing some more of Leonardo's letters to be fragments of such romances; particularly those of which the addresses can no longer be named. Still, as regards these drafts of letters to the *Diodario*, if we accept the Romance theory, as proposed by Prof. Govi, we are also compelled to assume that Leonardo purposed from the first to illustrate his tale; for it needs only a glance at the

sketches on Pl. CXVI to CXIX to perceive that they are connected with the texts; and of course the rest of Leonardo's numerous notes on matters pertaining to the East, the greater part of which are here published for the first time, may also be somehow connected with this strange romance.

7. *Città de Calindra (Chalindra)*. The position of this city is so exactly determined, between the valley of the Euphrates and the Taurus range that it ought to be possible to identify it. But it can hardly be the same as the sea port of Cilicia with a somewhat similar name Celenderis, Kelandria, Celendria, Kilindria, now the Turkish Gulnar. In two Catalonian Portulans in the Bibliothèque Nationale in Paris—one dating from the XVth century, by Wilhelm von Soler, the other by Olivez de Majorca, in 1584—I find this place called Calandra. But Leonardo's Calindra must certainly have lain more to the North West, probably somewhere in Kurdistan. The fact that the geographical position is so carefully determined by Leonardo seems to prove that it was a place of no great importance and little known. It is singular that the words first written in l. 8 were *divisa dal lago* (Lake Van?), altered afterwards to *dall' Eufrates*.

Nostri confini, and in l. 6 *proposito nostro*. These refer to the frontier and to the affairs of the Mamelook Sultan. Lines 65 and 66 throw some light on the purpose of Leonardo's mission.

8. *I corni del grā mōte Tauro*. Compare the sketches Pl. CXVI—CXVIII. So long as it is impossible to identify the situation of Calindra it is most difficult to decide with any certainty which peak of the Taurus is here meant; and I greatly regret that I had no foreknowledge of this puzzling topographical question when, in 1876, I was pursuing archaeological enquiries in the Provinces of Aleppo and Cilicia, and had to travel for some time in view of the imposing snow-peaks of Bulghar Dagh and Ala Tepessi.

9—10. The opinion here expressed as to the height of the mountain would be unmeaning, unless it had been written before Leonardo moved to Milan, where Monte Rosa is so conspicuous an

cossa dai razzi del sole "in oriète .; e per essere lei di pietra biächissima, essa forte risplende, e fa l'ufitio a questi Ermini come farebbe vn bel lume ¹²di luna nel mezzo delle tenebre; e per la sua grande altura essa passa la somma altezza de' nuvoli per spatio di 4 miglia; e per linia retta ¹³questa cima è ueduta di grā parte dell'occidente alluminata dal sole dopo il suo tramontare ¹⁴insino alla 3^a parte della notte; ed è quella che appresso di voi ne' tempi sereni abbi-amo già giudicato essere vna cometa, e pare a noi nelle ¹⁵tenebre della notte mvtarsi in varie figure, e quādo diuidersi in due o in 3 parti, e quādo lūga e quādo corta; e questo nascie per li ¹⁶nuvoli che nel orizzonte del cielo s'interpongono infra parte d'esso monte e il sole, e per tagliare l'uno essi raz¹⁷zi solari, il lume del monte è interrotto con vari spati di nvoli, e però è di figvra uaria¹⁸bile nel suo splendore.

object in the landscape. 4 *ore inanzi* seems to mean, four hours before the sun's rays penetrate to the bottom of the valleys.

11. *Pietra bianchissima*. The Taurus Mountains consist in great part of limestone.

14. *Appresso di voi*. Leonardo had at first written *noi* as though his meaning had been: This peak appeared to us to be a comet when you and I observed it in North Syria (at Aleppo? at Aintas?). The description of the curious reflection in the evening, resembling the "Alpine-glow" is certainly not an invented fiction, for in the next lines an explanation of the phenomenon is offered, or at least attempted.

19. The next 33 lines are evidently the contents of a connected Report or Book, but not of one

the sun always fall upon it on its East side, four hours before day-time, and being of the whitest stone[11] it shines resplendently and fulfils the function to these Armenians which a bright moon-light would in the midst of the darkness; and by its great height it out-reaches the utmost level of the clouds by a space of four miles in a straight line. This peak is seen in many places towards the West, illuminated by the sun after its setting the third part of the night. This it is, which with you[14] we formerly in calm weather had supposed to be a comet, and appears to us in the darkness of night, to change its form, being sometimes divided in two or three parts, and sometimes long and sometimes short. And this is caused by the clouds on the horizon of the sky which interpose between part of this mountain and the sun, and by cutting off some of the solar rays the light on the mountain is intercepted by various intervals of clouds, and therefore varies in the form of its brightness.

THE DIVISIONS OF THE BOOK[19].

- The praise and confession of the faith[20].
 The sudden inundation, to its end.
 [23]The destruction of the city.
 [24]The death of the people and their despair.
 The preacher's search, his release and benevolence[28].
 Description of the cause of this fall of the mountain[30].
 The mischief it did.

which he had at hand; more probably, indeed, of one he purposed writing.

20. *Persuasione di fede*, of the Christian or the Mohammedan faith? We must suppose the latter, at the beginning of a document addressed to so high a Mohammedan official. *Predica* probably stands as an abbreviation for *predicazione* (lat. *praedicatio*) in the sense of praise or glorification; very probably it may mean some such initial doxology as we find in Mohammedan works. (Comp. l. 40.)

26. 28. The phraseology of this is too general for any conjecture as to its meaning to be worth hazarding.

30. *Ruina del monte*. Of course by an earthquake. In a catalogue of earthquakes, entitled *kechf aussal-salèb an auasf ezzel-zelèh*, and written by Djelal eddin

Syouthy, the following statement occurs: "In the year 889 (1484 A.D.) there were six shocks of earthquake at Aleppo. They were excessively violent and threw the inhabitants into consternation." I owe this communication to the kindness of Prof. Ch. Schéfer, Membre de l'Institut, to whom this unpublished Arabic MS. belongs. The foregoing entries refer to two earthquakes in Cairo, in 1476 and 1481: the following ones indicate a time at which Leonardo was, certainly, living in Milan.

36. *Tagliata di Monte Tauro.* The Euphrates flows through the Taurus range near the influx of the Kura Shai; it rushes through a rift in the wildest cliffs from 2000 to 3000 feet high and runs on for 90 miles in 300 falls or rapids till it reaches Telek, near which at a spot called Gleikash, or the Hart's leap, it measures only 35 paces across. Compare the map on Pl. CXIX and the explanation fo it on p. 391.

[32] Fall of snow.

The finding of the prophet [33].

His prophesy.

[35] The inundation of the lower portion of Eastern Armenia, the draining of which was effected by the cutting through the Taurus Mountains.

How the new prophet showed [40] that this destruction would happen as he had foretold.

Description of the Taurus Mountains [43] and the river Euphrates.

Why the mountain shines at the top, from half to a third of the night, and looks like a comet to the inhabitants of the West after the sunset, and before day to those of the East.

Why this comet appears of variable forms, so that it is now round and now long, and now again divided into two or three parts, and now in one piece, and when it is to be seen again.

OF THE SHAPE OF THE TAURUS MOUNTAINS [53].

I am not to be accused, Oh Devatdar, of idleness, as your chidings seem to hint; but your excessive love for me, which gave rise to the benefits you have conferred on me [55] is that which has also compelled me to the utmost painstaking in seeking out and diligently investigating the cause of so great and stupendous an effect. And this could not be done without time; now, in order to satisfy you fully as to the cause of so great an effect, it is requisite that I should explain to you the form of the place, and then I will proceed to the effect, by which I believe you will be amply satisfied.

40. *Novo profeta*, l. 33, *profeta*. Mohammed. Leonardo here refers to the Koran:

In the name of the most merciful God.—When the earth shall be shaken by an earthquake; and the earth shall cast forth her burdens; and a man shall say, what aileth her? On that day the earth shall declare her tidings, for that thy Lord will inspire her. On that day men shall go forward in distinct classes, that they may behold their works. And whoever shall have wrought good of the weight of an ant, shall behold the same. And whoever shall have wrought evil of the weight of an ant, shall behold the same. (The Koran, translated by G. Sale, Chapter XCIX, p. 452).

53—94. The facsimile of this passage is given on Pl. CXVII.

54. The foregoing sketch of a letter, lines 5, 18, appears to have remained a fragment when Leonardo received pressing orders which caused

⁵⁹Nō ti dolere, o Diodario, del mio tardare a dar risposta alla tua desiderosa richiesta, perchè queste cose, di che tu mi richie⁶⁰desti, son di natura che nō senza processo di tempo si possono bene esprimere, e massime perchè, a voler mostrare la causa di ⁶¹si grande effetto, bisogna descrivere cō bona forma la natura del sito, e mediante quella tu potrai poi cō ⁶²facilità satisfarti della predetta richiesta;

⁶³Jo lascierò indietro la descrizione della forma dell'Asia Minore, e che mari o terre sien quelle che terminono ⁶⁴la figura della sua quātità, perchè so che la diligenza e sollecitudine de' tua studi non t'anno di tal notizia ⁶⁵privato; e verrò a denotare la vera figura di Taurus Mōte, il quale è quello ch'è cavatore di si stupenda e dannosa meraviglia, la quale serue alla espeditione del nostro pro⁶⁶posito; Questo monte Tavro è quello che appresso di molti è detto essere il giogo del Monte Cavcasso, ma, avēdo ⁶⁷voluto ben chiarirmi, ò voluto parlare con alquanti di quelli che abitano sopra del Mar Caspio, i quali mostrano che ⁶⁸quel sia il uero Mōte Cavcasso, che, benchè i mōti loro abbino il medesimo nome, questi son di maggiore altura, e però cōfermano, perchè Cavcasso in lingua Scitica vuol dire somma altezza, e in vero non ci è noti⁶⁹tia che l'oriēte nè l'occidente abbia monte di si grande altura; e la pruova, che così sia, è che li abitatori de' pac⁷⁰si, che gli stanno per ponēte, vedono i razzi del sole che allumina insino alla 4^a parte delle maggior notti grā ⁷¹parte della sua cima, e' simile fa a quelli paesi che gli stanno per oriēte.

QUALITÀ E QUĀTITÀ DEL MŌTE TAVRO.

⁷³L'onbra di questo giogo del Tauro è di tanta altura che, quādo di mezzo giugno il sole è a mezzo giorno, la sua obra s'a-

[59] Do not be aggrieved, O Devatdar, by my delay in responding to your pressing request, for those things which you require of me are of such a nature that they cannot be well expressed without some lapse of time; particularly because, in order to explain the cause of so great an effect, it is necessary to describe with accuracy the nature of the place; and by this means I can afterwards easily satisfy your above-mentioned request [62].

I will pass over any description of the form of Asia Minor, or as to what seas or lands form the limits of its outline and extent, because I know that by your own diligence and carefulness in your studies you have not remained in ignorance of these matters [65]; and I will go on to describe the true form of the Taurus Mountain which is the cause of this stupendous and harmful marvel, and which will serve to advance us in our purpose [66]. This Taurus is that mountain which, with many others is said to be the ridge of Mount Caucasus; but wishing to be very clear about it, I desired to speak to some of the inhabitants of the shores of the Caspian sea, who give evidence that this must be the true Caucasus, and that though their mountains bear the same name, yet these are higher; and to confirm this in the Scythian tongue Caucasus means a very high [68] peak, and in fact we have no information of there being, in the East or in the West, any mountain so high. And the proof of this is that the inhabitants of the countries to the West see the rays of the sun illuminating a great part of its summit for as much as a quarter of the longest night. And in the same way, in those countries which lie to the East.

OF THE STRUCTURE AND SIZE OF MOUNT TAURUS.

[73] The shadow of this ridge of the Taurus is of such a height that when, in the middle of June, the Sun is at its meridian, its

him to write immediately and fully on the subject mentioned in line 43.

59—62. This passage was evidently intended as an improvement on that immediately preceding it. The purport of both is essentially the same, but the first is pitched in a key of ill-disguised annoyance

which is absent from the second. I do not see how these two versions can be reconciled with the romance-theory held by Prof. Govi.

68. Caucasus; Herodot *Καύκασος*; Armen. *Kaukaz*.

73—75. The statements are of course founded on those of the 'inhabitants' spoken of in l. 67.

Handwritten text in a cursive script, likely a historical or geographical record, covering the left and bottom portions of the page. The text is organized into several distinct sections, some separated by horizontal lines. The script is dense and difficult to decipher due to its cursive nature and the age of the document.

159

Handwritten text in the lower right section, including a list of numbers (1000, 1000, 1000, 1000, 1000) and other numerical or descriptive entries, possibly a ledger or a list of items.

74 stende insino al principio della Sarmatia, che sō giornate · 12, e a mezzo dicembre s'astē⁷⁵de insino ai mōti Iperborei, che è viaggio d'un mese inverso tramontana; E senpre la sua parte opposita al u⁷⁶to che soffia è priva di nuvoli e nebbie, perchè il uento, che s'apre nella percussione del sasso, dopo esso sasso si uiene a richi-
77 vedere, e in tal moto porta con seco i nuvoli da ogni parte, e lasciali nella lor percussione; e senpre è piena di percussione di saette per la grā moltitudine di nvoli che li sō ricettati, onde il sasso è tutto fracassato e pien di grā ruine; Questo nelle ⁷⁸sua radici è abitato da richissimi popoli, ed è pieno di bellissimi fonti e fiumi; è fer⁷⁹tile e abbondante d'ogni bene e massime nelle parti che riguardano a mezzo giorno; — ⁸⁰ma quando se n'è montato circa 3 miglia, si comīcia a trovare le selue de' grā⁸¹di abeti, pini e faggi e altri simili alberi; dopo questi per spatio di 3 al⁸²tre miglia si trovano praterie e grādissime pasture, e tutto il resto, insino ⁸³al nascimēto del Monte Tavo, sono nevi

shadow extends as far as the borders of Sarmatia, twelve days off; and in the middle of December it extends as far as the Hyperborean mountains, which are at a month's journey to the North[75]. And the side which faces the wind is always free from clouds and mists, because the wind which is parted in beating on the rock, closes again on the further side of that rock, and in its motion carries with it the clouds from all quarters and leaves them where it strikes. And it is always full of thunderbolts from the great quantity of clouds which accumulate there, whence the rock is all riven and full of huge débris[77]. This mountain, at its base, is inhabited by a very rich population and is full of most beautiful springs and rivers, and is fertile and abounding in all good produce, particularly in those parts which face to the South. But after mounting about three miles we begin to find forests of great fir trees, and beech and other similar trees; after this, for a space of three more miles, there are meadows and vast pastures; and all the rest, as far as the beginning of the Taurus, is eternal snows

77. Sudden storms are equally common on the heights of Ararat. It is hardly necessary to observe that Ararat cannot be meant here. Its summit is formed like the crater of Vesuvius. The peaks sketched on Pl. CXVI—CXVIII are probably views of the same mountain, taken from different sides. Near the solitary peak, Pl. CXVIII these three names are written *goba*, *arnigasar*, *carūda*, names most likely of different peaks. Pl. CXVI and CXVII are in the original on a single sheet folded down the middle, 30 centimètres high and 43½ wide. On the reverse of one half of the sheet are notes on *peso* and *bilancia* (weight and balance), on the other are the 'prophecies' printed under Nos. 1293 and 1294. It is evident from the arrangement that these were written subsequently, on the space which had been left blank. These pages are facsimilied on Pl. CXVIII. In Pl. CXVI—CXVIII the size is smaller than in the original; the map of Armenia, Pl. CXVIII, is on Pl. CXIX slightly enlarged. On this map we find the following names, beginning from the right hand at the top: *pariades mō* (for Paryadres Mons, Arm. Parchar, now Barchal or Kolai Dagħ; Trebizond is on its slope).

Aquilone—North, *Antitaurus*. *Antitaurus* IIII *psis mō* (probably meant for Thospitis = Lake Van, Arm. Dgov Vanai, Tospoi, and the Mountain range to the South); *Gordis mō* (Mountains of Gordyaea), the birth place of the Tigris; *Oriente*—East; *Tigris*, and then, to the left, *Eufrates*. Then, above to the left *Argeo mō* (now Erdshigas, an extinct volcano, 12000 feet high); *Celano mō* (no doubt Sultan Dagħ in Pisidia). Celeno is the Greek town of Κελαιναί—see Arian 1, 29, 1—now the ruins of Dineir); *oriente*—East; *africo libezcō* (for libeccio—South West). In the middle of the Euphrates river on this small map we see a shaded portion surrounded by mountains, perhaps to indicate the inundation mentioned in l. 35. The affluent to the Euphrates shown as coming with many windings from the high land of 'Argeo' on the West, is the Tōchma Su, which joins the main river at Malatie. I have not been able to discover any map of Armenia of the XVth or XVIth century in which the course of the Euphrates is laid down with any thing like the correctness displayed in this sketch. The best I have seen is the Catalanian Portulan of Olivez de Majorca, executed in 1584, and it is far behind Leonardo's,

eterne che mai per alcū tenpo si par⁸⁴tono, che s'astendono all'altezza di circa 14 miglia in tutto; da questo na⁸⁵scimēto del Tavro insino all'altezza d'vn miglio non passano mai i nuvoli; ⁸⁶che qui abbiamo 15 miglia, che sono circa a 5 · miglia d'altezza per linia retta, ⁸⁷e altrettanto o circa troviamo essere la cima delli corni del Tauro, ⁸⁸ne'quali dal mezzo in su si comincia a trovare aria che riscalda e nō ⁸⁹vi si sente soffiamēti de' uēti, ma nessuna cosa ci può troppo vivere; ⁹⁰quui nō nasce cosa alcuna, saluo alcuni vcelli rapaci che ⁹¹covano nell'alte fessure del Tavro, e disciēdono poi sotto i nuvoli ⁹²a fare le lor prede sopra i monti erbosi; Questo è tutto sasso senplice, ⁹³cioè da' nuvoli insù, ed è sasso candidissimo · e in sulla alta cima nō ⁹⁴si può andare per l'aspra e pericolosa sua salita.

which never disappear at any time, and extend to a height of about fourteen miles in all. From this beginning of the Taurus up to the height of a mile the clouds never pass away; thus we have fifteen miles, that is, a height of about five miles in a straight line; and the summit of the peaks of the Taurus are as much, or about that. There, half way up, we begin to find a scorching air and never feel a breath of wind; but nothing can live long there; there nothing is brought forth save a few birds of prey which breed in the high fissures of Taurus and descend below the clouds to seek their prey. Above the wooded hills all is bare rock, that is, from the clouds upwards; and the rock is the purest white. And it is impossible to walk to the high summit on account of the rough and perilous ascent.

C. A. 211 b; 621 a]

1337.

1337. On comparing this commencement of a letter l. 1—2 with that in l. 3 and 4 of No. 1336 it is quite evident that both refer to the same event. (Compare also No. 1337 l. 10—12 and 17 with No. 1336 l. 23, 24 and 32.) But the text No. 1336, including the fragment l. 3—4, was obviously

written later than the draft here reproduced. The *Diodario* is not directly addressed—the person addressed indeed is not known—and it seems to me highly probable that it was written to some other patron and friend whose name and position are not mentioned.

Hellog, Dujardin

a fare tanto nocimēto alli omni⁸ quāto al presente da noi · s'è veduto · e provato, in modo ch'io nō posso immaginare · che cosa si possin⁹ piv accresciere a tanto male, il quale noi provammo in spatio di dieci ore; In prima fummo assaliti e comba¹⁰ttuti dall'impeto · e furore de' vēti e a questo s'aggiunsero le ruine delli grā mōti di neve, i quali ànno ripieno tutte questi valli¹¹ e cōquassato grā parte della nostra città; E nō si cōtēntādo di questo, la fortuna¹² cō subiti diluvi d'acque ebbe a sommergere tutta la parte bassa di questa città; oltre di questo s'aggiunse vna subita piog¹³gia, anzi ruinosa tēpesta piena d'acqua, sabbia, fango e pietre, insieme avviluppati cō radici sterpi e ciocchi di uarie piāte; ¹⁴e ogni cosa scorrendo per l'aria discēdea sopra di noi; e in vltimo vno inciēdio di fuoco pareva cōdotto nō che da vēti ma da 10 milia diavoli, che'l portassino, il quale à abbruciato e disfatto tutto questo ¹⁵paese, e ancora non vi è cessato; E que' pochi, che siamo restati, siamo rimasti · cō tanto sbigottimēto ¹⁶e tāta pavra che appena come balordi abbiamo ardire di parlare · l'uno coll'altro; avēdo · abbandonato ogni · nostra cura, ci stiamo insieme vniti ¹⁷jn certe ruine di chiese insieme misti maschi e femine, piccoli e grādi, a modo di ¹⁸torme di capre; ¶ i vicini per pietà ci ànno soccorso di uettovaglie, i quali erā prima nostri

us here, what we have seen and gone through is such that I could not imagine that things could ever rise to such an amount of mischief, as we experienced in the space of ten hours. In the first place we were assailed and attacked by the violence and fury of the winds[10]; to this was added the falling of great mountains of snow which filled up all this valley, thus destroying a great part of our city[11]. And not content with this the tempest sent a sudden flood of water to submerge all the low part of this city[12]; added to which there came a sudden rain, or rather a ruinous torrent and flood of water, sand, mud, and stones, entangled with roots, and stems and fragments of various trees; and every kind of thing flying through the air fell upon us; finally a great fire broke out, not brought by the wind, but carried as it would seem, by ten thousand devils, which completely burnt up all this neighbourhood and it has not yet ceased. And those few who remain unhurt are in such dejection and such terror that they hardly have courage to speak to each other, as if they were stunned. Having abandoned all our business, we stay here together in the ruins of some churches, men and women mingled together, small and great[17], just like herds of goats. The neighbours out of pity succoured us with victuals, and they had previously been our enemies. And if

The text between the words capre and Ora is written on the margin. The words: i vicini . . . nostri nimici are written in six short lines on the right side and the following words esse nō . . . di fame are written in eleven lines on the opposite side: i vicini |

11. *Della nostra città* (Leonardo first wrote *di questa città*). From this we may infer that he had at some time lived in the place in question wherever it might be.

12. *Certe ruine di chiese*. Either of Armenian churches or of Mosques, which it was not unusual to speak of as churches.

Maschi e femmini insieme unite, implies an infringement of the usually strict rule of the separation of the sexes.

18. *I vicini, nostri nimici*. The town must then have stood quite close to the frontier of the country. Compare 1336. L. 7. *vicini ai nostri confini*. Dr. M. JORDAN has already published lines 4—13 (see *Das Malerbuch, Leipzig*, 1873, p. 90:—his reading differs from mine)

under the title of "Description of a landscape near Lake Como". We do in fact find, among other loose sheets in the Codex Atlanticus, certain texts referring to valleys of the Alps (see Nos. 1030, 1031 and note p. 237) and in the arrangement of the loose sheets, of which the Codex Atlanticus has been formed, these happen to be placed close to this text. The compiler stuck both on the same folio sheet; and if this is not the reason for Dr. JORDAN'S choosing such a title (Description &c.) I cannot imagine what it can have been. It is, at any rate, a merely hypothetical statement. The designation of the population of the country round a city as "the enemy" (*nemici*) is hardly appropriate to Italy in the time of Leonardo.

nimici; ¶ e se nō fossero cierti popoli che ci àno soccorso di uettovaglia, tutti saremmo morti di fame; Ora vedi come ci ¹⁹troviamo; E tutti questi mali son niēte a cōparatione di quelli che in breve tēpo ne son promessi;

²⁰So che come amico ti cōtristerai del mio male come già con lettere ti mostrai con effetto rallegrarmi del tuo bene . . .

F. 37d]

LIBRO 43 DEL MOTO DELL'ARIA INCLUSA SOTTO L'ACQUA.

...Ho veduto mov³imēti d'aria tanto furiosi, che àno ac¹compagnati e misti col corso suo li ⁵grandissimi alberi delle selue e li tetti in⁶teri de grā palazzi, e questa medesima ⁷furia fare vna buca con moto reuer⁸tiginoso e cavare vn ghiareto e portare ghi⁹ara, rena, acqua più d'ū mezzo miglio in¹⁰aria.

Notes about
events ob-
served
abroad
(1338. 1339).

Br. M. 155a]

A similitudine d'uno ritrosito vento che scorra in un a²renosa e cavata valle che pel suo veloce corso scac¹cia al cētro tutte quelle cose che s'oppōgono al suo furi⁴oso corso

⁵Non altramēti il settētrionale aquilone ripercuote ⁶colla sua tēpesta

"per pieta" ci a sochorso . . esse nō fussi socorso di uttovaglia . . saremo. 19. Etitū . . chē breve . . ne promesso. 20. chome . . cōtristerai . . chome . . collettere timosstra . . ralegrarmi.

1338. 1. lacq¹"a". 3. annō a. 5. elli. 6. palazi ecquesta. 7. bucha. 8. giareto e portare gia. 9. mezo miglo. 10. naria.

1339. 1. chesschorranuna. 2. chavata . . chorso scha. 3. qlle chose chessoppōghono. 4. chorso. 5. altremēti . . settātrione . . ripercuote. 6. cholla. 7. mvglia il [sellantrionale] tēpestoso. 8. [mosso chō grā furia da] quādo . . settātrionale.

1338. The first sixteen lines of this passage which treat of the subject as indicated on the title-line have no place in this connexion and have been omitted.

2. *Ho veduto movimenti* &c. Nothing of the kind happened in Italy during Leonardo's lifetime, and it is therefore extremely probable that this refers to the natural phenomena which are so fully described in the foregoing passage. (Compare too, No. 1021.) There can be no doubt that the descriptions of the Deluge in the Libro di Pittura (Vol. I, No. 607-611), and that of the fall of a mountain No. 610, l. 17-30 were written from the vivid impressions derived from personal experience. Compare also Pl. XXXIV-XL.

it had not been for certain people who succoured us with victuals, all would have died of hunger. Now you see the state we are in. And all these evils are as nothing compared with those which are promised to us shortly.

I know that as a friend you will grieve for my misfortunes, as I, in former letters have shown my joy at your prosperity . . .

1338.

BOOK 43. OF THE MOVEMENT OF AIR ENCLOSED IN WATER.

I have seen motions of the air so furious that they have carried, mixed up in their course, the largest trees of the forest and whole roofs of great palaces, and I have seen the same fury bore a hole with a whirling movement digging out a gravel pit, and carrying gravel, sand and water more than half a mile through the air.

1339.

Like a whirling wind which rushes down a sandy and hollow valley, and which, in its hasty course, drives to its centre every thing that opposes its furious course

No otherwise does the Northern blast whirl round in its tempestuous progress

1339. It may be inferred from the character of the writing, which is in the style of the note in facsimile Vol. I, p. 297, that this passage was written between 1470 and 1480. As the figure 6 at the end of the text indicates, it was continued on another page, but I have searched in vain for it. The reverse of this leaf is coloured red for drawing in silver point, but has not been used for that purpose but for writing on, and at about the same date. The passages are given as Nos. 1217, 1218, 1219, 1162 and No. 994 (see note page 218). The text given above is obviously not a fragment of a letter, but a record of some personal experience. No. 1379 also seems to refer to Leonardo's journeys in Southern Italy.

Heliog. Dujardin.

Imp. Eudes

⁷Nō fa si grā muggchio il tēpestoso mare, ⁸quādo il settētrionale aquilone ⁹lo ripercuote colle scivmose onde fra Scilla e Cariddi, nè Stronboli o Mō¹⁰gibello, quando le solfuree fiañe, essendo richiuse, ¹¹per forza ronpēdo e aprēdo il grā mōte, fulminādo ¹²per l'aria pietre terra isieme col'uscita e vomitata fiaña . . .

¹³Nē quādo le infocate caverne di Mōgibello rivomitādo il male tenuto elemēto, spigniendolo ¹⁴alla sua regione, cō furia cacciaōdo ināzi qualūche ostacolo ¹⁵s'interpone alla sua ipetuosa furia . . .

¹⁶E tirato dalla mia bramosa voglia, vago di uedere la gran cō . . . ¹⁷delle varie e strane forme fatte dalla artificiosa natura, ragiratomì ¹⁸alquāto jfra gli ōbrosi scogli pervenni all'ētrata d'una ¹⁹grā caverna dinanzi alla quale restato alquāto ²⁰stupefatto,— e jgniorante di tal cosa piegato le mie rene ²¹in arco e ferma la stāca mano sopra il ginocchio e colla destra mi feci tenebra ²²alle abbassate e chivse ciglia; e spesso piegādomi in qua e in là per vè²³dere dētro vi discernessi alcuna cosa, e questo vietatomi per ²⁴la grāde oscurità, che là entro era, e stato alquāto, subito si destarono ²⁵in me 2 cose, pavra e desiderio; paura per la minaccio²⁶sa oscura spilonca, desidero per vedere se là ētro fusse alcuna ²⁷miracolosa cosa . . .

Nor does the tempestuous sea bellow so loud, when the Northern blast dashes it, with its foaming waves between Scylla and Charybdis; nor Stromboli, nor Mount Etna, when their sulphurous flames, having been forcibly confined, rend, and burst open the mountain, fulminating stones and earth through the air together with the flames they vomit.

Nor when the inflamed caverns of Mount Etna, rejecting the ill-restrained element vomit it forth, back to its own region, driving furiously before it every obstacle that comes in the way of its impetuous rage . . .

Unable to resist my eager desire and wanting to see the great . . . of the various and strange shapes made by formative nature, and having wandered some distance among gloomy rocks, I came to the entrance of a great cavern, in front of which I stood some time, astonished and unaware of such a thing. Bending my back into an arch I rested my left hand on my knee and held my right hand over my down-cast and contracted eye brows: often bending first one way and then the other, to see whether I could discover anything inside, and this being forbidden by the deep darkness within, and after having remained there some time, two contrary emotions arose in me, fear and desire—fear of the threatening dark cavern, desire to see whether there were any marvellous thing within it

13. *Mongibello* is a name commonly given in Sicily to Mount Etna (from Djebel, Arab.=mountain). Fr. FERRARA, *Descrizione dell'Etna con la storia delle eruzioni* (Palermo, 1818, p. 88) tells us, on the authority of the *Cronaca del Monastero Benedettino di Licordia*, of an eruption of the Volcano with a great flow of lava on Sept. 21, 1447. The next records of the mountain are from the years 1533 and 1536. A. Percy neither does mention any eruptions of Etna during the years to which this note must probably refer (*Mémoire des tremblements de terre de la péninsule italique*, Vol. XXII des *Mémoires*

couronnées et Mémoires des savants étrangers. Académie Royale de Belgique).

A literal interpretation of the passage would not, however, indicate an allusion to any great eruption; particularly in the connection with Stromboli, where the periodical outbreaks in very short intervals are very striking to any observer, especially at night time, when passing the island on the way from Naples to Messina.

1340. The numerous corrections, the alterations in the figures (l. 18) and the absence of any signature prove that this is merely the rough draft of a

compositori di instrumēti bellici, et che la inuētionē di operatione di detti instrumēti nō sono niente aliene dal commune vso: Mi forzerò, nō derogando a nessuno altro, farmi itendere da Vostra Eccellentia, aprē-

of instruments of war, and that the invention and operation of the said instruments are nothing different to those in common use: I shall endeavour, without prejudice to any one else, to explain myself to your Excellency

letter to Lodovico il Moro. It is one of the very few manuscripts which are written from left to right—see the facsimile of the beginning as here reproduced. This is probably the final sketch of a document the clean of which copy was written in the usual manner. Leonardo no doubt very rarely wrote so, and this is probably the reason of the conspicuous dissimilarity in the handwriting, when he did. (Compare Pl. XXXVIII.) It is noteworthy too that here the orthography and abbreviations are also exceptional. But such superficial peculiarities are not enough to stamp the document as altogether spurious. It is neither a forgery nor the production of any artist but Leonardo himself. As to this point the contents leave us no doubt as to its authenticity, particularly l. 32 (see No. 719,

where this passage is repeated). But whether the fragment, as we here see it, was written from Leonardo's dictation—a theory favoured by the orthography, the erasures and corrections—or whether it may be a copy made for or by Melzi or Mazenta is comparatively unimportant. There are in the Codex Atlanticus a few other documents not written by Leonardo himself, but the notes in his own hand found on the reverse pages of these leaves amply prove that they were certainly in Leonardo's possession. This mark of ownership is wanting to the text in question, but the compilers of the Codex Atlanticus, at any rate, accepted it as a genuine document.

With regard to the probable date of this projected letter see Vol. II, p. 3.

1. ⁷Ho modi di ponti leggerissimi e forti, e atti ad portare facilissimamēte, et cō quelli seguire ⁸e alcuna uolta fuggire li inimici, e altri securi e iōffensibile da foco ⁹e battaglia, facili e cōnodi (da leuare e ponere); Et modi di ardere e disfare quelli del'inimico.

¹⁰2. So ī la ossidione di una terra togliere uia l'acqua de' fossi; e fare īfiniti pōti: gatti e scale ¹¹e altri īstrumenti pertinēti a detta speditione.

¹²3. Itē se per altezza di argine o per fortezza di loco e di sito nō si potesse ī la ossidione di ¹³vna terra usare l'officio delle bombarde: ho modi di ruinare omni rocca o altra fortezza, ¹⁴se già nō fusse fondata ī su el sasso ecc.

¹⁵4. Ho ancora modi di bombarde. cōmodissime e facili a portare: Et con quelle buttare minuti sassi ¹⁶a similitudine quasi di tempesta; E con il fumo di quella dando grāde spauēto al'inimico ¹⁷con graue suo danno e confusione ecc.

¹⁸9. Et quādo accadesse essere ī mare, ho modi di molti īstrumenti attissimi da offendere e difendere: ¹⁹et nauili che faranno resistentia al trarre di omni grossissima bōbarda: e poluere e fumi.

²⁰5. Itē ho modi: per caue e uie secrete distorte fatte senza alcuno strepito per uenire disegnato ²¹... ancora che bisognasse passare sotto fossi o alcuno fiume.

²²6. Item farò carri coperti e securi iōffensibili, i quali ētrādo ītra li inimici con sue artiglierie; nō è si grāde multi²³tudine di gente d'arme che nō rompessino: E dietro a questi potranno seguire fāterie assai illesi e sēza ²⁴alcuno īpedimēto.

²⁵7. Item occorrendo di bisogno, farò bōbarde, mortari e passauolanti di bellissime e utili forme fuori del comune uso;

²⁶8. Doue mācasse la operatione delle bōbarde comporrò briccole, māgani | trabuchi e altri īstrumenti di mirabile ²⁷efficacia e fuori del' usato: Et ī soīma secondo la uarietà de' casi cōporrò uarie e īfinite cose da offēdere e di . . .

1) I have a sort of extremely light and strong bridges, adapted to be most easily carried, and with them you may pursue, and at any time flee from the enemy; and others, secure and indestructible by fire and battle, easy and convenient to lift and place. Also methods of burning and destroying those of the enemy.

2) I know how, when a place is besieged, to take the water out of the trenches, and make endless variety of bridges, and covered ways and ladders, and other machines pertaining to such expeditions.

3) Item. If, by reason of the height of the banks, or the strength of the place and its position, it is impossible, when besieging a place, to avail oneself of the plan of bombardment, I have methods for destroying every rock or other fortress, even if it were founded on a rock, &c.

4) Again I have kinds of mortars; most convenient and easy to carry; and with these can fling small stones almost resembling a storm; and with the smoke of these causing great terror to the enemy, to his great detriment and confusion.

9) [8] And when the fight should be at sea I have kinds of many machines most efficient for offence and defence; and vessels which will resist the attack of the largest guns and powder and fumes.

5) Item I have means by secret and tortuous mines and ways, made without noise to reach a designated [spot], even if it were needed to pass under a trench or a river.

6) Item. I will make covered chariots, safe and unattackable which, entering among the enemy with their artillery, there is no body of men so great but they would break them. And behind these, infantry could follow quite unhurt and without any hindrance.

7) Item. In case of need I will make big guns, mortars and light ordnance of fine and useful forms, out of the common type.

8) Where the operation of bombardment should fail, I would contrive catapults, mangonels, *trabocchi* and other machines of marvellous efficacy and not in common use. And in short, according to the variety of cases, I can contrive various and endless means of offence and defence.

[secondo le occurrētie] fuggire. 9. de ādē . . . qlli. 10. obsidione de . . . togliere "r" uia laqua, et . . . ghatti. 11. ad dicta expeditione. 12. de āgine . . . de loco . . . pottesse . . . obsidione de. 13. dele . . . omni [forte] o | "rocca" (?) altra. 14. saxo. 15. anchora . . . de bombāde . . . facile ad . . . Et cū q̄lle . . . minuti [saxi]. 16. a [disimilitudine quasi] di . . . cūel . . . q̄lla. 17. cū. 18. accadessi de . . . istrūnti actissimi . . . offēdē e defendē. 19. de . . . g"o"ssissima . . . polue. 20. facte . . . uenire [ad uno ce"r"to] e diseg"ato. 21. ||||| anchora . . . coperti "e securi" e . . . cq"ta" li ītrādo ītra [in] li inimica cū . . . si [grosso] grande. 23. darne . . . Et . . . poteranno inlesi. 24. alchuno. 25. occurendo di bi soḡ . . . mōtari . . . utile forma fora del cōe. 26. mācassi . . . de le componero . . . māgliani. 27. fora . . . sēdo . . . cōpoīro . . . ed |||||. 28. credo satisfare . . . ḡ . . . edifitū e p. 29. et pvati . .

²⁸10. In tēpo di pace credo di soddisfare benissimo al paragone di ogni altro in architettura, i compositione di ediftii e pubblici ²⁹e privati: e i cōdurre acqua da uno loco ad uno altro.

³⁰Jtē cōdurrò i scultura, di marmore, di bronzo e di terra: simile i pictura ciò che si possa fare ³¹a paragone di ogni altro e sia chi vuole.

³²Ancora si potrà dare opera al cauallo di bronzo, che sarà gloria imortale e eterno onore della ³³felice memoria del signore vostro padre e dela iclyta casa Sforzesca;

³⁴E se alcuna delle sopradette cose a alcuno paressino ipossibili e ifattibili, mi offero ³⁵paratissimo a farne esperimento i parco uostro, o i qual loco piacerà a vostra Eccellenza, al³⁶la quale umilmente quanto più posso, mi raccomando ecc.

10) In time of peace I believe I can give perfectsatisfaction and to the equal of any other in architecture and the composition of buildings public and private; and in guiding water from one place to another.

Item: I can carry out sculpture in marble, bronze or clay, and also in painting whatever may be done, and as well as any other, be he whom he may.

[32]Again, the bronze horse may be taken in hand, which is to be to the immortal glory and eternal honour of the prince your father of happy memory, and of the illustrious house of Sforza.

And if any one of the above-named things seem to any one to be impossible or not feasible, I am most ready to make the experiment in your park, or in whatever place may please your Excellency—to whom I commend myself with the utmost humility &c.

1342. 1. vedere i modello. 2. a me. 3. acquelli cheffieno chagione.

1341. Evidently a note of the superscription of a letter to the Duke, and written, like the foregoing from left to right. The manuscript containing it is of the year 1493. Lodovico was not proclaimed and styled Duke of Milan till September 1494. The Dukedom of Bari belonged to the Sforza family till 1499.

1342. 1343. These two notes occur in the same

not very voluminous MS. as the former one and it is possible that they are fragments of the same letter. By the *Modello*, the equestrian statue is probably meant, particularly as the model of this statue was publicly exhibited in this very year, 1493, on the occasion of the marriage of the Emperor Maximilian with Bianca Maria Sforza.

S. K. M. III. 79*b*]

1343.

Ecco · signor · molti · giētil omni² che faranno infra loro · questa · spesa, ³ lasciādo loro · godere l'entrata dell'acque, ⁴ mvlina e passaggio di navili, e quādo ⁵ e' sarà vēduto · loro il prezzo loro rēderā⁶no il navilio di Martigiana . . .

There are here, my Lord, many gentlemen who will undertake this expense among them, if they are allowed to enjoy the use of admission to the waters, the mills, and the passage of vessels and when it is sold to them the price will be repaid to them by the canal of Martesana.

C. A. 308*b*; 939*a*]

1344.

Assai mi rincrescīe d'essere ī neciessità², ma piv mi dole² che quella · sia causa · dello interrōpere il desiderio mio, il ³quale · è sempre disposto a vbidir uostra Eccellentia; ⁴ forse che uostra Eccellētia ⁵nō commise altro a messer Gual⁶tieri, credēdo che io avessi dina⁷ri . . .

I am greatly vexed to be in necessity, but I still more regret that this should be the cause of the hindrance of my wish which is always disposed to obey your Excellency.

Perhaps your Excellency did not give further orders to Messer Gualtieri, believing that I had money enough.

⁸E mi rincrescīe assai che tu m'abbi rītrovato in neciessità, e che l'auere io ¹⁰a guadagniare il uitto, m'abbi¹¹ a interrōpere . . .

I am greatly annoyed that you should have found me in necessity, and that my having to earn my living should have hindered me . . .

¹² Assai mi rincresce che l'auere a guadagnia¹³re il uitto · m'abbia forzato interrōpere l'opera e di soddis¹⁴fare ad alcuni piccoli, del seguitare l' o¹⁵pera che già vostra Signoria mi commise; Ma spero in bre¹⁶ue avere guadagniato · tanto che potrò · soddisfare ¹⁷ad animo riposato · a vostra Eccellenza, alla quale ¹⁸mi raccomandādo, e se uostra Signoria credesse ch'io ¹⁹avessi · dinari, quella s'inganerebbe; ò tenvtō · 6 · boche 56 mesi, e ò avuto 50 ducati.

[12] It vexes me greatly that having to earn my living has forced me to interrupt the work and to attend to small matters, instead of following up the work which your Lordship entrusted to me. But I hope in a short time to have earned so much that I may carry it out quietly to the satisfaction of your Excellency, to whom I commend myself; and if your Lordship thought that I had money, your Lordship was deceived. I had to feed 6 men for 56 months, and have had 50 ducats.

11. See No. 723, where this passage is repeated.

17. See No. 1344 l. 12.

19. In April, 1498, Leonardo was engaged in painting the Saletta Nigra of the Castello at Milan. (See G. MONGERI, *L'Arte in Milano*, 1872, p. 417.)

1346, 1347. Piacenza belonged to Milan. The Lord spoken of in this letter, is no doubt Lodovico

il Moro. One may infer from the concluding sen-
tence (No. 1346, l. 33, 34 and No. 1347), that
Leonardo, who no doubt compiled this letter,
did not forward it to Piacenza himself, but gave
it to some influential patron, under whose name
and signature a copy of it was sent to the Com-
mission.

stra . età givdicādo che questa . età fusse mal fornita d'omini ⁶di bon givditio . e di boni . maestrī, vedendo lealtre città, e massime la città de' Fiorentini, quasi ne' medesimi tēpi, essere ⁷dotata di sì belle e magnie opere di bronzo, intra le quali le porte del loro Battisterio .; la qual Fiorētia ., si come Piaciētia, ⁸è terra di passo . doue . cōcorrono assai forestieri ., i quali vedendo le opere belle o bone, belle fanno . a se ⁹medesimi impressioni: quella città . essere fornita di degni abitatori, vedendo l'opere testimonie d'essa opinione; e per lo contrario di¹⁰co, vedendo . tanta spesa di metallo operata si tristamēte, che mē uergognia alla città ¹¹sarebbe che esse porte fussino di senplice legniamē ., perchè la poca spesa della materia ¹²nō parebbe meriteuole di grāde . spesa di magisterio ., òde che . .

be abused by your descendants, judging that this age was but ill supplied with men of good counsel and with good masters; seeing that other cities, and chiefly the city of the Florentines, has been as it were in these very days, endowed with beautiful and grand works in bronze; among which are the doors of their Baptistery. And this town of Florence, like Piacenza, is a place of intercourse, through which many foreigners pass; who, seeing that the works are fine and of good quality, carry away a good impression, and will say that that city is well filled with worthy inhabitants, seeing the works which bear witness to their opinion; and on the other hand, I say seeing so much metal expended and so badly wrought, it were less shame to the city if the doors had been of plain wood; because, the material, costing so little, would not seem to merit any great outlay of skill . . .

Now the principal parts which are sought for in cities are their cathedrals, and of these the first things which strike the eye are the doors, by which one passes into these churches.

Beware, gentlemen of the Commission, lest too great speed in your determination, and so much haste to expedite the entrusting of so great a work as that which I hear you have ordered, be the cause that that which was intended for the honour of God and of men should be turned to great dishonour of your judgments, and of your city, which, being a place of mark, is the resort and gathering-place of innumerable foreigners. And this dishonour would result if by your lack of diligence you were to put your trust in some vaunter, who by his tricks or by favour shown to him here should obtain such work from you, by which lasting and very great shame would result to him and to you. Thus I cannot help being angry when I consider what men those are who have conferred with you as wishing to undertake this great work without thinking of their sufficiency for it, not to say more. This one is a potter, that one a maker of cuirasses, this one is a

³⁵I miseri ³⁶studiosi . . . ⁴¹con che speranza e' posso ⁴³no aspettare pre ⁴⁴mio di lor virtù?

bell-founder, another a bell ringer, and one is even a bombardier; and among them one in his Lordship's service, who boasted that he was the gossip of Messer Ambrosio Ferrere [26], who has some power and who has made him some promises; and if this were not enough he would mount on horseback, and go to his Lord and obtain such letters that you could never refuse [to give] him the work. But consider where masters of real talent and fit for such work are brought when they have to compete with such men as these. Open your eyes and look carefully lest your money should be spent in buying your own disgrace. I can declare to you that from that place you will procure none but average works of inferior and coarse masters. There is no capable man,—[33]and you may believe me,—except Leonardo the Florentine, who is making the equestrian statue in bronze of the Duke Francesco and who has no need to bring himself into notice, because he has work for all his life time; and I doubt, whether being so great a work, he will ever finish it [34].

The miserable painstakers . . . with what hope may they expect a reward of their merit?

C. A. 316a; 958a]

1347.

Ecco vno il quale il signiore, per fare questa sua opera à tratto di Firenze ²che è degno maestro, ma à tāta faciēda che non la finirà mai; ³e credete voi che differētia sia a vedere vna cosa bella da una brutta; ⁴allega Plinio.

There is one whom his Lordship invited from Florence to do this work and who is a worthy master, but with so very much business he will never finish it; and you may imagine that a difference there is to be seen between a beautiful object and an ugly one. Quote Pliny.

carry into effect a will, made three years ago when my father died—as also, and no less, because I would not fail in a matter I esteem most important—I cannot forbear to crave of your most Reverend Highness a letter of recommendation and favour to Ser Raphaello Hieronymo, at present one of the illustrious members of the Signoria before whom my cause is being argued; and more particularly it has been laid by his Excellency the Gonfaloniere into the hands of the said Ser Raphaello, that his Worship may have to decide and end it before the festival of All Saints. And therefore, my Lord, I entreat you, as urgently as I know how and am able, that your Highness will write a letter to the said Ser Raphaello in that admirable and pressing manner which your Highness can use, recommending to him Leonardo Vincio, your most humble servant as I am, and shall always be; requesting him and pressing him not only to do me justice but to do so with despatch; and I have not the least doubt, from many things that I hear, that Ser Raphaello, being most affectionately devoted to your Highness, the matter will issue *ad votum*. And this I shall attribute to your most Reverend Highness' letter, to whom I once more humbly commend myself. *Et bene valeat.*

menesi, Vol. III. It is the only text throughout this work which I have not myself examined and copied from the original. The learned discoverer of this letter—the only letter from Leonardo hitherto known as having been sent—adds these interesting remarks: *Codesto Cardinale nato ad Ercole I. nel 1470, arcivescovo di Strigonia a sette anni, poi d'Agra, aveva conseguito nel 1497 la pingue ed ambuata cattedra di Milano, là dove avrà conosciuto il Vinci, sebbene il poco amore ch'ei professava alle arti lasci credere che le proteste di servuū di Leonardo più che a gratitudine per favori ricevuti e per opere a lui allogate, accennino a speranza per un favore che si aspetta. Notabile è ancora in questo prezioso documento la ripetuta signatura del grande artista che si scrive Vincio e Vincius, non da Vinci come si tiene comunemente, sebbene l'una e l'altra possano valere*

a significare così il casato come il paese; restando a sapere se il nome del paese di Vinci fosse assunto a cognome della famiglia di Leonardo nel qual supposto più propriamente avrebbe a chiamarsi Leonardo Vinci, o Vincio (latinamente Vincius) com'egli stesso amò segnarsi in questa lettera, e come scrissero parecchi contenporanei di lui, il Casio, il Cesariano, Geoffroy Tory, il Gaurico, il Bandello, Raffaele Maffei, il Paciolo. Per ultimo non lascerò d'avvertire come la lettera del Vinci è assai ben conservata, di nitida e larga scrittura in forma pienamente corrispondente a quella dei suoi manoscritti, vergata all'uso comune da sinistra a destra, anzichè contrariamente come fu suo costume; ma indubbiamente autentica e fornita della menzione e del suggello che fresca ancora conserva l'impronta di una testa di profilo da un picciolo antico canneo. (Compare No. 1368, note.)

quãto fatto sdegniare con meco, e questo è che da tante lettere che io ho scritte a uostra ³Signoria io non ò mai avuto risposta; hora io mando costì Salai per fare intendere a uostra Signoria ⁴come io sono quasi al fine del mio letigio che io ho co'mia fratelli, come io credo trouarmi costì in questa ⁵pasqua e portare con meco due quadri di due nostre donne di uarie grandezze, Le quali son fatte ⁶pel cristianissimo nostro rè, e perchè a uostra Signoria piacerà, jo avrei ben caro di sapere alla mia ⁷tornata di costa, doue io auessi a stare per stanza, perchè non uorrei dare più noia a uostra Signoria, e ⁸ancora, auendo io lauorato pel cristianissimo rè, se la mia prouisione è per correre o no; jo scriuo ⁹al presidente di quella acqua che mi donò il rè, della quale non fui messo in possessione, perchè in quel tẽpo u'era ¹⁰carestia nel nauilio per causa de'gran secchi, e perchè i sua bocchelli non erano moderati; ma bẽ mi promise che, ¹¹fatta tal moderatione, io ne sarei messo in possessione; sicchè io prego uostra Signoria che non le incresca, ¹²che ora che tali bochelli son moderati, di fare ricordare al presidente la mia espeditiõne cioè di darmi la ¹³possessione d'essa acqua, perchè alla uenuta mia spero farui su strumẽti e cose che sarã di grã piacere al ¹⁴nostro cristianissimo rè; Altro non mi accade; sono senpre a uostri comandi.

somewhat angry with me, and that this is why to so many letters which I have written to your Lordship I have never had an answer. I now send Salai to explain to your Lordship that I am almost at an end of the litigation I had with my brother; that I hope to find myself with you this Easter, and to carry with me two pictures of two Madonnas of different sizes. These were done for our most Christian King, or for whomsoever your Lordship may please. I should be very glad to know on my return thence where I may have to reside, for I would not give any more trouble to your Lordship. Also, as I have worked for the most Christian King, whether my salary is to continue or not. I wrote to the President as to that water which the king granted me, and which I was not put in possession of because at that time there was a dearth in the canal by reason of the great droughts and because [10]its outlets were not regulated; but he certainly promised me that when this was done I should be put in possession. Thus I pray your Lordship that you will take so much trouble, now that these outlets are regulated, as to remind the President of my matter; that is, to give me possession of this water, because on my return I hope to make there instruments and other things which will greatly please our most Christian King. Nothing else occurs to me. I am always yours to command.

1349. Charles d'Amboise, Maréchal de Chaumont, was Governor of Milan under Louis XII. Leonardo was in personal communication with him so early as in 1503. He was absent from Milan in the autumn of 1506 and from October 1510—when he besieged Pope Julius II. in Bologna—till his death, which took place at Correggio, February 11. 1511. Francesco Vinci, Leonardo's uncle, died—as Amoretti tells us—in the winter of 1510—11 (or according to Uzielli in 1506?), and Leonardo remained in Florence for business connected with his estate. The letter written with reference to this affair, No. 1348, is undoubtedly earlier than the letters Nos. 1349 and 1350. Amoretti tells us, *Memorie*

Storiche, ch. II, that the following note existed on the same leaf in MS. C. A. I have not however succeeded in finding it. The passage runs thus: *Jo sono quasi al fine del mio letigio che io ò con mie fratigli Ancora ricordo a V. Excia la facenda che ò cum Ser Giuliano mio Fratello capo delli altri fratelli ricordandoli come se offerse di conciar le cose nostre fra noi fratelli del comune della eredità de mio Zio, e quelli costringa alla expeditione, quale conteneua la lettera che lui me mandò.*

10. Compare Nos. 1009 and 1010.

Leonardo has noted the payment of the pension from the king in 1505.

³Magnifico presidēte io.

⁴Magnifico presidente, essendomi io piv volte ricordato delle proferte fattemi da uostra Eccellētia più volte, ò preso sicurtà ⁵di scriuere e di ricordare a questa la promessa fattami à l'ultima partita, cioè la possessione di quel⁶le 12 once d'acqua donatemi dal cristianissimo rè; vostra Signoria sa che io non ētraì in essa possessione, perchè in quel ⁷tempo, ch'ela mi fu donata, era carestia d'acqua nel navilio, si pel grā secco come pel non essere ancora moderati li sua bochelli; ma ⁸mi fu promesso da uostra Eccellentia che fatta tal moderatione io avrei l'intento mio; di poi, intendendo essere acconcio il navilio, io scrissi più volte a vo⁹stra signoria e a Messer Girolamo da Cusano, che à apresso di se la carta di tal donazione, e così scrissi al Corigero, e ¹⁰mai ebbi risposta; Ora io mādo costì Salai, mio discepolo, aportatore di questa, al quale vostra Signoria potrà ¹¹dire a bocca tutto quel ch'è seguito, della qual cosa io prego vostra Eccellentia; ¹²Jo credo esser costì in questa pasqua per esser presso al fine del mio piateggiare, e porterò cō meco due quadri di nostra ¹³donna che io ò commīciate, e ò le ne' tempi, che mi sono avāzati, condotte in assai bō porto; Altro nō mi accade.

¹⁴Magnifico Signore mio, l'amore che uostra Eccellētia m'ā senpre dimostro, e' benefiti ch'io ò riceuti da quella al continuo ¹⁵mi sō dināzi

¹⁶Io ò sospetto che la poca remuneratiō de' grā benefiti ch'io ho riceuto da uostra Eccellentia non l'abbì¹⁷no fatto alquāto turbare con meco, e questo è che di piv lettere che io ò scritte a vostra Eccellentia io non ò mai ¹⁸avuta risposta . . ora io mando costì Salai per fare intendere a vostra signoria, come io son quasi al fine del mio ¹⁹letigio coi mia fratelli, e come io credo essere costì in questa pasqua e portare con meco due quadri doue sono ²⁰due Nostre donne di varie grādezze, le quali io ò comīciato pel cristianissimo rè, o per chi a uoi piacerà; avrei ben caro di sa²¹per

Magnificent President, I . . .

Magnificent President:—Having oftentimes remembered the proposals made many times to me by your Excellency, I take the liberty of writing to remind your Lordship of the promise made to me at my last departure, that is the possession of the twelve inches of water granted to me by the most Christian King. Your Lordship knows that I did not enter into possession, because at that time when it was given to me there was a dearth of water in the canal, as well by reason of the great drought as also because the outlets were not regulated; but your Excellency promised me that as soon as this was done, I should have my rights. Afterwards hearing that the canal was complete I wrote several times to your Lordship and to Messer Girolamo da Cusano, who has in his keeping the deed of this gift; and so also I wrote to Corigero and never had a reply. I now send thither Salai, my pupil, the bearer of this, to whom your Lordship may tell by word of mouth all that happened in the matter about which I petition your Excellency. I expect to go thither this Easter since I am nearly at the end of my lawsuit, and I will take with me two pictures of our Lady which I have begun, and at the present time have brought them on to a very good end; nothing else occurs to me.

My Lord the love which your Excellency has always shown me and the benefits that I have constantly received from you I have hitherto

I am fearful lest the small return I have made for the great benefits I have received from your Excellency may not have made you somewhat annoyed with me. And this is why, to many letters which I have written to your Excellency I have never had an answer. I now send to you Salai to explain to your Excellency that I am almost at the end of my litigation with my brothers, and that I hope to be with you this Easter and carry with me two pictures on which are two Madonnas of different sizes which I began for the most Christian King, or for whomsoever you please. I should be very glad to

alla mia tornata di costà, dove io ò a stare per stanza, perchè nō uorrei dare più noia a uostra Signoria, e ā²²cora, auendo io laurato pel cristianissimo Rè, se la mia prouisione è per correre o no; io scriuo al presidē²³te di quell' acqua che mi donò il rè, della quale nō fui messo in possessione per esserne carestia nel navilio per ca²⁴usa de' grā secchi, e perchè i sua bocchelli non erā moderati; ma bē mi promise che, fatta tal moderatione, i'ne sarei ²⁵messo in possessione, sichè io vi prego che, scontrandovi in esso presidente, nō ui increzca che ora, che tali bochelli sō ²⁶moderati, di ricordare a detto presidente di farmi dare la possessione d'essa acqua, che mi parue intēdere che in grā par²⁷te staua a lui; altro non mi accade; sono senpre a uostri comādi.

²⁸Buō di, messer Francesco, puō lo fare Iddio che di tante lettere ch'io v'ò scritte che mai voi non m'abbiate risposto; Or aspettate ²⁹ch'io venga costà, per Dio, ch'io vi farò tanto scrivere che forse vi rincrescerà.

³⁰Caro mio, messer Francesco, io mādo costì Salai per intendere dalla magnificentia del presidente che fine à avuta quella ³¹moderatione dell'acque che alla mia partita fu ordinata per li bochelli del navilio, perchè el magnifico presidēte mi promi³²se che subito fatta tal moderatione, io sarei spedito; Ora egli è più tempo che io intesi che il nauilio s'accō³³ciaua, e similmente i sua bochelli, e inmediate scrissi al presidente e a uoi, e poi replicai, e mai ebbi ³⁴risposta; adūque voi degnerete di rispōdermi quel ch'è seguito, e non essendo per spedirsi nō u'icresca per mio a³⁵more di sollicitarne vn poco il presidente e così messer Girolamo da Cusano, al quale uoi mi racomādare³⁶te e offeriretemi a sua magnificētia.

know where, on my return from this place, I shall have to reside, because I do not wish to give more trouble to your Lordship; and then, having worked for the most Christian King, whether my salary is to be continued or not. I write to the President as to the water that the king granted me of which I had not been put in possession by reason of the dearth in the canal, caused by the great drought and because its outlets were not regulated; but he promised me certainly that as soon as the regulation was made, I should be put in possession of it; I therefore pray you that, if you should meet the said President, you would be good enough, now that the outlets are regulated, to remind the said President to cause me to be put in possession of that water, since I understand it is in great measure in his power. Nothing else occurs to me; always yours to command.

Good day to you Messer Francesco. Why, in God's name, of all the letters I have written to you, have you never answered one. Now wait till I come, by God, and I shall make you write so much that perhaps you will become sick of it.

Dear Messer Francesco. I am sending thither Salai to learn from His Magnificence the President to what end the regulation of the water has come since, at my departure this regulation of the outlets of the canal had been ordered, because His Magnificence the President promised me that as soon as this was done I should be satisfied. It is now some time since I heard that the canal was in order, as also its outlets, and I immediately wrote to the President and to you, and then I repeated it, and never had an answer. So you will have the goodness to answer me as to that which happened, and as I am not to hurry the matter, would you take the trouble, for the love of me, to urge the President a little, and also Messer Girolamo Cusano, to whom you will commend me and offer my duty to his Magnificence.

1350. 28—36. Draft of a letter to Francesco Melzi, born 1493—a youth therefore of about 17 in 1510. Leonardo addresses his young friend as "Messer", as being the son of a noble house.

Melzi practised art under Leonardo as a dilettante and not as a pupil, like Cesare da Sesto and others (See LERMOLIEFF, *Die Galerien &c.*, p. 476).

[Illustrissimo mio Signore, ² Assai mi rallegrò, illustrissimo mio signiore, del uostro].

³ Tanto mi son rallegrato, o illustrissimo mio signore, del desiderato acquisto di vostra sanità che io quasi ho [riavuto la sanità mia]—[sono all'ultimo del mio male]—e'l male mio da me s'è fuggito — della quasi reintegrata sanità di vostra Eccellenza; ⁴ Ma assai mi rincresce il nō auere io potuto integralmēte soddisfare alli desideri di uostra Eccellentia mediā⁵te la malignità di cotesto ingannatore, al quale non ò lasciato indiriato cosa alcuna colla quale ⁶ io li abbia potuto giovare che per me non li sia stata fatta e prima la sua provisione inanzi al tēpo li era pagata, la quale io credo che volentieri ⁷ negherebbe, se io non avessi la scritta e testificata da me e dallo interprete, e vedendo io che per me nō si laurava, se nō quādo ⁸ i lavori d'altri si mācavano, de' quali lui era sollecito investigatore, jo lo preghai che dovesse mangi⁹re con meco, e laurare indi ap-

[Most illustrious Lord. I greatly rejoice most Illustrious Lord at your . . .]

Drafts of a letter to Giuliano de' Medici (1351-1352).

I was so greatly rejoiced, most illustrious Lord, by the desired restoration of your health, that it almost had the effect that [my own health recovered]—[I have got through my illness]—my own illness left me—of your Excellency's almost restored health. But I am extremely vexed that I have not been able completely to satisfy the wishes of your Excellency, by reason of the wickedness of that deceiver, for whom I left nothing undone which could be done for him by me and by which I might be of use to him; and in the first place his allowances were paid to him before the time, which I believe he would willingly deny, if I had not the writing signed by myself and the interpreter. And I, seeing that he did not work for me unless he had no work to do for others, which he was very careful in solliciting, invited him to dine with me, and to work afterwards near me, because, besides the saving of expense, he

1351. 1353. It is clear from the contents of this notes that they refer to Leonardo's residence in Rome in 1513—1515. Nor can there be any doubt that they were addressed to Leonardo's patron at the time: Giuliano de' Medici, third son of Lorenzo the Magnificent and brother of Pope Leo X (born 1478). In 1512 he became the head of the Florentine Republic. The Pope invited him to Rome, where he settled; in 1513 he was named patrician with much splendid ceremonial. The medal struck in honour of the event bears the words MAG. IVLIAN. MEDICES. Leonardo too uses the style "Magnifico", in his letter. Compare also No. 1377.

GINO CAPPONI (*Storia della Repubblica di Firenze*, Vol. III, p. 139) thus describes the character of Giuliano de' Medici, who died in 1516: *Era il migliore della famiglia, di vita placida, grande spenditore, tenendo intorno a sè uomini ingegnosi, ed ogni nuova cosa voleva provare.*

See too GREGOROVIVS, *Geschichte der Stadt Rom*, VIII (book XIV. III, 2): *Die Lustschlösser fürstlicher Grösse, wozu ihm der Papst hatte erheben wollen zerfielen.*

Julian war der edelste aller damaligen Medici, ein Mensch von innerlicher Richtung, unbefriedigt durch das Leben, mitten im Sonnenglanz der Herrlichkeit Leo's X. eine dunkle Gestalt die wie ein Schatten vorüberzog. Giuliano lived in the Vatican, and it may be safely inferred from No. 1352 l. 2, and No. 1353 l. 4, that Leonardo did the same.

From the following unpublished notice in the Vatican archives, which M. Eug. Müntz, librarian of the Ecole des Beaux arts, Paris, has done me the favour to communicate to me, we get a more accurate view of Leonardo's relation to the often named GIORGIO TEDESCO:

Nota delle provisione (sic) a da pagare per me in nome del nostro ill. S. Bernardo Bini e chompa di Roma, e prima della illma sua chonsorte ogni mese d. 800.

A Ldo da Vinci per sua provisione d. XXXIII, e più d. VII al detto per la provisione di Giorgio tedesco, che sono in tutto d. 40.

From this we learn, that seven ducats formed the German's monthly wages, but according to No. 1353 l. 7 he pretended that eight ducats had been agreed upon.

presso di me, perchè oltre al conto elli acquisterebbe il linguaggio italiano; [lui senpre lo promise e mai lo volle fare]; E questo facievo ancora, perchè quel Giovã tedesco che fa li spechi ogni dì lì era in bottega, e volleua vedere e intendere ciò che si facieva e publicava per la . . . forte biasimando; e perchè lui māgiava cō quelli ¹⁰della guardia del papa, e poi se n'ādava in compagnia colli scoppietti, amazādo vccelli per queste anticaglie e così seguitava da dopo desinare a sera; E se io mandavo Lorēzo ¹¹a sollecitarli il lavoro lui si cruciava e diceva che nō volea tanti maestri sopra capo, e che il laorar suo era ¹²per la guardaroba di vostra Eccellētia, e passò dua mesi e così seguitava e indi, trovādo Giannicolò della ¹³guardaroba, domādailo s'el Tedesco avea finito l'opere del magnifico, e lui mi disse non esser vero, ma che so¹⁴lamēte li avea dato a nettar dua scoppiette; di poi faciēdolo io sollecitare lui lasciò la bettega, e comīciò a lavorare ī came¹⁵ra, e perde assai tēpo nel fare vn altra morsa e lime e altri strumēti a vite; e quiui lavorava mulinelli da torcere seta, ¹⁶li quali nascōdeva, quādo un de' mia v'ētrava, e con mille bestemie e rimbrotti, in modo che nessū de mia voleva piv entrare.

¹⁷Tanto mi sō rallegrato, jllustrissimo mio Signore, del desiderato acquisto di vostra sanità che quasi il male mio da me ¹⁸s'è fugito; Ma assai mi rincresce il non avere io potuto integralmēte soddisfare alli desideri di uostra Eccellenza ¹⁹mediante la malignità di cotesto ingānatore tedesco, per il quale non ò lasciato indireto cosa alcuna, ²⁰colla quale io abbia creduto farli piacere; e secondariamente invitarlo ad abitare e vivere con meco, per la qual cosa io ve²¹drei al continuo l'opera che lui facesse, e cō facilità ricorreggieri li errori; e oltre di quest'o inparerebbe la lingua italiana, ²²mediante la quale lui cō facilità potrebbe parlare senza interprete; e li sua danari li

would acquire the Italian language. He always promised, but would never do so. And this I did also, because that Giovanni, the German who makes the mirrors, was there always in the workshop, and wanted to see and to know all that was being done there and made it known outside . . . strongly criticising it; and because he dined with those of the Pope's guard, and then they went out with guns killing birds among the ruins; and this went on from after dinner till the evening; and when I sent Lorenzo to urge him to work he said that he would not have so many masters over him, and that his work was for your Excellency's Wardrobe; and thus two months passed and so it went on; and one day finding Gian Niccolò of the Wardrobe and asking whether the German had finished the work for your Magnificence, he told me this was not true, but only that he had given him two guns to clean. Afterwards, when I had urged him farther, he left the workshop and began to work in his room, and lost much time in making another pair of pincers and files and other tools with screws; and there he worked at mills for twisting silk which he hid when any one of my people went in, and with a thousand oaths and mutterings, so that none of them would go there any more.

I was so greatly rejoiced, most Illustrious Lord, by the desired restoration of your health, that my own illness almost left me. But I am greatly vexed at not having been able to completely satisfy your Excellency's wishes by reason of the wickedness of that German deceiver, for whom I left nothing undone by which I could have hope to please him; and secondly I invited him to lodge and board with me, by which means I should constantly see the work he was doing and with greater ease correct his errors while, besides this, he would learn the Italian tongue, by means of which he could with more ease talk without an interpreter; his moneys were always given him in advance of the

furō ²³sēpre dati ināzi al tēpo ; Dipoi la richiesta di costui fu di avere li modelli ²⁴finiti di legniamē, com'ellino aveano a essere di ferro, e' quali volea portare nel suo paese; La qual cosa io li negai diciē-²⁵doli ch'io li darei in disegno la larghezza, lunghezza e grossezza e figura di ciò ch'elli avesse a fare, e così restammo mal volētieri.

²⁶La secōda cosa fu, che si fecie vn altra bottega e morse e strumenti, dove dormiua, e quivi lavorava per altri, dipoi andava a desī²⁷nare co' Suizzeri della guardia, dove sta giēte sfacciēdata, della qual cosa lui tutti li uīcieva; e'l piv ²⁸delle volte se n'andauano due o tre di loro, colli scoppietti; ammazzavā vccielli per le anticaglie, e questo durava insino a sera;

²⁹Al fine ò trovato come ³⁰questo maestro Giovā ³¹ni delli Spechi è quello ³²che à fatto il tutto per ³³due cagioni; e la prima ³⁴perchè lui à avuto a dire che ³⁵la venuta mia qui ³⁶li à tolto la cōuersa³⁷tione e'l favore di uostra ³⁸Signoria, che senpre ve . . . ³⁹L'altra è ⁴⁰che la stātia ⁴¹di questo fereui ⁴²disse cōuenirsi a lui per ⁴³lavorare li spechi, e ⁴⁴di questo n' à fatto dimostra⁴⁵tione chè, oltre al farmi ⁴⁶costui nimico, li à fatto vē⁴⁷dere ogni suo e lasciare ⁴⁸a lui la sua bot⁴⁹tega, nella qual lavora ⁵⁰cō molti lavorāti assai spe⁵¹chi per mādare alle fiere.

time when due. Afterwards he wanted to have the models finished in wood, just as they were to be in iron, and wished to carry them away to his own country. But this I refused him, telling him that I would give him, in drawing, the breadth, length, height and form of what he had to do; and so we remained in ill-will.

The next thing was that he made himself another workshop and pincers and tools in his room where he slept, and there he worked for others; afterwards he went to dine with the Swiss of the guard, where there are idle fellows, in which he beat them all; and most times they went two or three together with guns, to shoot birds among the ruins, and this went on till evening.

At last I found how this master Giovanni the mirror-maker was he who had done it all, for two reasons; the first because he had said that my coming here had deprived him of the countenance and favour of your Lordship which always . . . The other is that he said that his iron-workers' rooms suited him for working at his mirrors, and of this he gave proof; for besides making him my enemy, he made him sell all he had and leave his workshop to him, where he works with a number of workmen making numerous mirrors to send to the fairs.

1354. A puzzling passage, meant, as it would seem, for a jest. Compare the description of Giants in Dante, *Inf.* XXI and XXII. Perhaps Leonardo had the Giant Antaeus in his mind. Of him the myth relates that he was a son of Gê, that he fed on lions; that he hunted in Libya and killed the inhabitants. He enjoyed the peculiarity of

renewing his strength whenever he fell and came in contact with his mother earth; but that Hercules lifted him up and so conquered and strangled him. Lucan gives a full account of the struggle. *Pharsalia* IV, 617. The reading of this passage, which is very indistinctly written, is in many places doubtful.

410'

410²

risentito jġ gigāte e sētēdosi ¹² quasi coperto dalla moltitudine, subito sentesi cuo¹³ cere per le pūtūre; mise uno muggio che parve ¹⁴ fusse vno spavētoſo tono, e posto le sue mani in ¹⁵ terra, e levatosi il pavroso volto, e postosi ¹⁶ vna delle mani jġ capo trovò selo ¹⁷ pieno ¹⁸ d' uomini appiccati e canna-¹⁹glia a similitudine de' mi²⁰nvti animali, che fra que ²¹ gli sogliono nascere; ²² onde scuotendo jġ capo gli o²³mini lācia non altramēti per l'aria che si faccia ²⁴ la grādine, quādo va cō furor di vēti, e trovossi molti ²⁵ di questi vomini esser morti da quegli che gli stavano so²⁶pra ritti; coi piedi calpeſtādo . . .

²⁷ E tenēdosi a capegli ēgiegniādosi nascōdere tra quegli, facevano ²⁸ a similitudine de' marinai quādo è fortuna, che corrono super le corde ²⁹ per abbassar la a poco vēto.

³⁰ Nuove delle cose ³¹ di levāte; ³² sappi come ³³ nel mese ³⁴ di givgnio ³⁵ è apparito ³⁶ vn gigāte che viē dalla ³⁷ deserta Libia, ³⁸ a similitudine delle ³⁹ formiche furiā⁴⁰do ⁴¹ abbatuto dall ⁴² rigido villano.

⁴³ Questo gigāte era nato nel Mōt' Atalate, ed era ⁴⁴ un eroe, e ebbe cōtrastare cogli Egiti e Arabi ⁴⁵ Medi e Persi; viveva jġ mare delle bale⁴⁶ne de' grā capidogli e de' navili.

⁴⁷ Marte, temēdo della ⁴⁸ vita, s'era fugito sotto le ⁴⁹ di Giove.

⁵⁰ ¶ E per la grā caduta parve la provīcia ⁵¹ tutta tremasse. ¶

frequent wounds; by which, the giant being roused and feeling himself almost covered by the multitude, he suddenly perceives the smarting of the stabs, and sent forth a roar which sounded like a terrific clap of thunder; and placing his hands on the ground he raised his terrible face: and having lifted one hand to his head he found it full of men and rabble sticking to it like the minute creatures which not unfrequently are found there; wherefore with a shake of his head he sends the men flying through the air just as hail does when driven by the fury of the winds. Many of these men were found to be dead; stamping with his feet.

And clinging to his hair, and striving to hide in it, they behaved like sailors in a storm, who run up the ropes to lessen the force of the wind [by taking in sail].

News of things from the East.

Be it known to you that in the month of June there appeared a Giant, who came from the Lybian desert . . . mad with rage like ants . . . struck down by the rude.

This great Giant was born in Mount Atlas and was a hero and had to fight against the Egyptians and Arabs, Medes and Persians. He lived in the sea on whales, grampuses and ships.

Mars fearing for his life took refuge under the . . . of Jove.

And at the great fall it seemed as though the whole province quaked.

Tutti i mali che sono ²e che furono, ⁶essēdo messi in opera da costui ⁷nō satisfarebbero al deside⁸rio del suo iniquo animo; ⁹io nō potrei con lunghezza di tēpo ¹⁰descriverei la natura di costu¹¹i, ma bē cōchivdo che . . .

All the ills that are or ever were, if they could be set to work by him, would not satisfy the desires of his iniquitous soul; and I could not in any length of time describe his nature to you, but I conclude . . .

C. A. 380a; 1179b]

1357.

Io ho uno che per auersi di me promesso cose assai mē che debite, ²essendo rimasto ingañato del suo prosuntuoso desiderio, a tē³tato di tormi tutti li amici e perchè li à trouati saui e non leggi⁴eri al suo volere mi à minaciato che trouate le annūtiationi ⁵che mi torrà i benefattori; oēde io ho di questo informato ⁶vostra Signoria accio [che, volendo questo seminare li usati ⁷scādoli, non troui terreno atto a seminare pensieri e li ⁸atti della sua mala natura]; ⁹che, tentādo lui fare di uostra signoria strumēto della sua iniqua e maluagia natura ¹⁰rimāga ingannato di suo desiderio.

I know one who, having promised me much, less than my due, being disappointed of his presumptuous desires, has tried to deprive me of all my friends; and as he has found them wise and not pliable to his will, he has menaced me that, having found means of denouncing me, he would deprive me of my benefactors. Hence I have informed your Lordship of this, to the end [that this man who wishes to sow the usual scandals, may find no soil fit for sowing the thoughts and deeds of his evil nature] so that he, trying to make your Lordship, the instrument of his iniquitous and maliceous nature may be disappointed of his desire.

1358. Below this text we read *gusstino* = Giustino and in another passage on the same page Justin is

quoted (No. 1210, l. 45). The two have however no real connection.

son quelli ³a chi i sua viti dispiacino; anzi solamente a quelli omini li dispiacino⁴no che son di natura cōtraria a tali uitj; e molti odiano li ⁵padri e guastan le amicitie, reprēsori de' sua viti e non ⁶vogliono esenpli contrari a essi, nè nessuno vmā consiglio.

⁷E se alcuno si ne trova virtuoso e bono, non lo scacciate ⁸da voi; fatteli onore, acciò che non abbia a fugarli da ⁹voi e ridursi neli eremi, o spelonche, o altri lochi soleta¹⁰ri, per fugarli dalle vostre insidie, e se alcun di questi ¹¹tali si trova, fatteli onore, perchè questi sono li uostri Iddei ¹²terrestri, questi meritā da uoi le statue e li simulacri; ma ¹³bē ui ricordo che li lor simulacri nō siē da uoi mā¹⁴giati come ācora in alcuna regione del India; ¹⁵chè quādo li simulacri operano alcuno mi¹⁶raculo secondo loro, li sacerdoti li tagliano in pezzi, essen¹⁷do di legno, e ne danno a tutti quelli del paese nō ¹⁸sanza premio, e ciascū raspa sottilmēte la sua parte ¹⁹e mette sopra la prima vivanda che māgiano; e così tē²⁰gono per fede aversi māgiato il suo santo, e credono che lui li ²¹guardi poi da tutti li pericoli || che ti pare, uomo, qui della ²²tua spetie? sei tu così sauiò, come tu ti tieni? son ²³queste cose da esser fatte da omini?

few whom his vices have disgusted, and he only dislikes those men whose natures are contrary to those vices. And many hate their fathers, and break off friendship with those who reprove their vices; and he will not permit any examples against them, nor any advice.

If you meet with any one who is virtuous do not drive him from you; do him honour, so that he may not have to flee from you and be reduced to hiding in hermitages, or caves or other solitary places to escape from your treachery; if there is such an one among you do him honour, for these are our Saints upon earth; these are they who deserve statues from us, and images; but remember that their images are not to be eaten by you, as is still done in some parts of India [15], where, when the images have according to them, performed some miracle, the priests cut them in pieces, being of wood, and give them to all the people of the country, not without payment; and each one grates his portion very fine, and puts it upon the first food he eats; and thus believes that by faith he has eaten his saint who then preserves him from all perils. What do you think here, Man, of your own species? Are you so wise as you believe yourselves to be? Are these things to be done by men?

L. 15. In explanation of this passage I have received the following communication from Dr. G. W. LEITNER of Lahore: "So far as Indian customs are known to us, this practice spoken of by Leonardo as 'still existing in some parts of India' is perfectly unknown; and it is equally opposed to the spirit of Hinduism, Mohammedanism and Sikhism. In central Thibet the ashes of the dead,

when burnt, are mixed with dough, and small figures—usually of Buddha—are stamped out of them and some are laid in the grave while others are distributed among the relations. The custom spoken of by Leonardo may have prevailed there but I never heard of it." Possibly Leonardo refers here to customs of nations of America.

1371. adi p^oo" dagosto.

1368. So Leonardo writes his name on a sheet with sundry short notes, evidently to try a pen. Compare the signature with those in Nos. 1341, 1348 and 1374 (see also No. 1346, l. 33). The form "Lionardo" does not occur in the autographs. The Portrait of the Master in the Royal Library at Turin, which is reproduced—slightly diminished—on Pl. I, has in the original two lines of writing underneath; one in red chalk of two or three words is partly effaced: *lionardo it . . . lm* (or *lai*?); the second written in pencil is as follows: *fatto da lui stesso assai vecchio*. In both of these the writing is very like the Master's, but is certainly only an imitation.

1369. This date is on a drawing of a rocky landscape. See *Chronique des Arts* 1881 no. 23: *Léonard de Vinci a-t-il été au Righi le 5 août 1473?* letter by H. de Geymüller. The next following date in the MSS. is 1478 (see No. 663).

1370. While the letters in the MS. notes of 1473 and 1478 are very ornate, this note and the texts on anatomy on the same sheet (for instance No. 805) are in the same simple hand as we see on Pl. CXVI and CXIX. No 1370 is the only dated note of the years between 1480 and 1489, and the characters are in all essential points identical with those that we see in the latest manuscripts written in France (compare the facsimiles on Pl. CXV and

p. 254), so that it is hardly possible to determine exactly the date of a manuscript from the style of the handwriting, if it does not betray the peculiarities of style as displayed in the few notes dated previous to 1480.—Compare the facsimile of the manuscripts 1479 on Pl. LXII, No. 2; No. 664, note, Vol. I p. 346. This shows already a marked simplicity as compared with the calligraphy of 1478.

The text No. 720 belongs to the year 1490; No. 1510 to the year 1492; No. 1459, No. 1384 and No. 1460 to the year 1493; No. 1463, No. 1517, No. 1024, 1025 and 1461 to the year 1494; Nos. 1523 and 1524 to the year 1497.

1371. *Scrissi qui*. Leonardo does not say where; still we may assume that it was not in Milan. Amoretti writes, *Memorie Storiche*, chap. XIX: *Sembra pertanto che non nel 1499 ma nel 1500, dopo il ritorno e la prigionia del duca, sia da qui partito Leonardo per andare a Firenze; ed è quindi probabile, che i mesi di governo nuovo e incerto abbia passati coll' amico suo Francesco Melzi a Vaprio, ove meglio che altrove studiar poteva la natura, e soprattutto le acque, e l'Adda specialmente, che già era stato l'oggetto delle sue idrostatiche ricerche*. At that time Melzi was only six years of age. The next date is 1502; to this year belong No. 1034, 1040, 1042, 1048 and 1053. The note No. 1525 belongs to the year 1503.

1372. This statement of Ser Piero's age contradicts that of the *Riassunto della portata di Antonio da Vinci* (Leonardo's grandfather), who speaks of Ser Piero as being thirty years old in 1457; and that of the *Riassunto della portata di Ser Piero e Francesco*, sons of Antonia da Vinci, where Ser Piero is mentioned as being forty in 1469. These documents were published by G. UZIELLI, *Ricerche intorno a L. da Vinci, Firenze, 1872*, pp. 144 and 146. Leonardo was, as is well known, a natural son. His mother 'La Catarina' was married in 1457 to Acchattabriga di Piero del Vaccha da Vinci. She died in 1519. Leonardo never mentions her in the Manuscripts. In the year of Leonardo's birth Ser Piero married Albiera di Giovanni Amadoci, and after her death at the age of thirty eight he again married, Francesca, daughter of Ser Giovanni Lanfredi, then only fifteen. Their children were Leonardo's half-brothers, Antonio (b. 1476), Ser Giuliano (b. 1479), Lorenzo (b. 1484), a girl, Violante (b. 1485), and another boy Domenico (b. 1486); Domenico's descendants still exist as a family. Ser Piero married for the third time Lucrezia di Guglielmo Cortigiani

by whom he had six children: Margherita (b. 1491), Benedetto (b. 1492), Pandolfò (b. 1494), Guglielmo (b. 1496), Bartolommeo (b. 1497), and Giovanni (date of birth unknown). Pierino da Vinci the sculptor (about 1520—1554) was the son of Bartolommeo, the fifth of these children. The dates of their deaths are not known, but we may infer from the above passage that they were all still living in 1505.

1373. This and the previous text it may be remarked are the only mention made by Leonardo of his father; Nos. 1526, 1527 and No. 1463 are of the year 1504.

1374. Thus he writes on the first page of the MS. The title is on the foregoing coversheet as follows: *Libro titolato disstrafformatione coe* (cioè) *d'un corpo non* (in un) *altro senza diminutione e accrescimento di materia.*

1375. No. 1528 and No. 1529 belong to the same year. The text Vol. I, No. 4 belongs to the following year 1509 (1508 old style); so also does No. 1009.—Nos. 1022, 1057 and 1464 belong to 1511.

1376. No. 1465 belongs to the same year. No. 1065 has the next date 1514.

1377. Giuliano de Medici, brother to Pope Leo X.; see note to Nos. 1351—1353. In February, 1515, he was married to Filiberta, daughter of Filippo, Duke of Savoy, and aunt to Francis I, Louis XII's successor on the throne of France. Louis XII died

on Jan. 1st, and not on Jan. 9th as is here stated.— This addition is written in paler ink and evidently at a later date.

1378. *Castello del clli*. The meaning of this word is obscure; it is perhaps not written at full length.

XXII.

Miscellaneous Notes.

The incidental memoranda scattered here and there throughout the MSS. can have been for the most part intelligible to the writer only; in many cases their meaning and connection are all the more obscure because we are in ignorance about the persons with whom Leonardo used to converse nor can we say what part he may have played in the various events of his time. Vasari and other early biographers give us a very superficial and far from accurate picture of Leonardo's private life. Though his own memoranda, referring for the most part to incidents of no permanent interest, do not go far towards supplying this deficiency, they are nevertheless of some importance and interest as helping us to solve the numerous mysteries in which the history of Leonardo's long life remains involved. We may at any rate assume, from Leonardo's having committed to paper notes on more or less trivial matters on his pupils, on his house-keeping, on various known and unknown personages, and a hundred other trifles—that at the time they must have been in some way important to him.

I have endeavoured to make these 'Miscellaneous Notes' as complete as possible, for in many cases an incidental memorandum will help to explain the meaning of some other note of a similar kind. The first portion of these notes (Nos. 1379—1457), as well as those referring to his pupils and to other artists and artificers who lived in his house (1458—1468) are arranged in chronological order. A considerable proportion of these notes belong to the period between 1490 and 1500, when Leonardo was living at Milan under the patronage of Lodovico il Moro, a time concerning which we have otherwise only very scanty information. If Leonardo did really—as has always been supposed,—spend also the greater part of the preceding decade in Milan, it seems hardly likely that we should not find a single note indicative of the fact, or referring to any event of that period, on the numerous loose leaves in his writing that exist. Leonardo's life in Milan between 1489 and 1500 must have been comparatively uneventful. The MSS. and memoranda of those years seem to prove that it was a tranquil period of intellectual and artistic labour rather than of bustling court life. Whatever may

have been the fate of the MSS. and note books of the foregoing years—whether they were destroyed by Leonardo himself or have been lost—it is certainly strange that nothing whatever exists to inform us as to his life and doings in Milan earlier than the consecutive series of manuscripts which begin in the year 1489.

There is nothing surprising in the fact that the notes regarding his pupils are few and meagre. Excepting for the record of money transactions only very exceptional circumstances would have prompted him to make any written observations on the persons with whom he was in daily intercourse, among whom, of course, were his pupils. Of them all none is so frequently mentioned as Salai, but the character of the notes does not—as it seems to me—justify us in supposing that he was any thing more than a sort of factotum of Leonardo's (see 1519, note).

Leonardo's quotations from books and his lists of titles supply nothing more than a hint as to his occasional literary studies or recreations. It was evidently no part of his ambition to be deeply read (see Nrs. 10, 11, 1159) and he more than once expressly states (in various passages which will be found in the foregoing sections) that he did not recognise the authority of the Ancients, on scientific questions, which in his day was held paramount. Archimedes is the sole exception, and Leonardo frankly owns his admiration for the illustrious Greek to whose genius his own was so much akin (see No. 1476). All his notes on various authors, excepting those which have already been inserted in the previous section, have been arranged alphabetically for the sake of convenience (1469—1508).

The passages next in order contain accounts and inventories principally of household property. The publication of these—often very trivial entries—is only justifiable as proving that the wealth, the splendid mode of life and lavish expenditure which have been attributed to Leonardo are altogether mythical; unless we put forward the very improbable hypothesis that these notes as to money in hand, outlay and receipts, refer throughout to an exceptional state of his affairs, viz. when he was short of money.

The memoranda collected at the end (No. 1505—1565) are, in the original, in the usual writing, from left to right. Besides, the style of the handwriting is at variance with what we should expect it to be, if really Leonardo himself had written these notes. Most of them are to be found in juxtaposition with undoubtedly authentic writing of his. But this may be easily explained, if we take into account the fact, that Leonardo frequently wrote on loose sheets. He may therefore have occasionally used paper on which others had made short memoranda; for the most part as it would seem, for his use. At the end of all I have given Leonardo's will from the copy of it preserved in the Melzi Library. It has already been printed by Amoretti and by Uzielli. It is not known what has become of the original document.

1379. The mysterious looking words, quite distinctly written, in line 1: *ingol*, *amor a*, *ilopan a* and on line 2: *enoiganod al* are obviously in cipher and the solution is a simple one; by reading them backwards we find for *ingol*: logni—probably *longi*, evidently the name of a person; for *amor a*: *a Roma*, for *ilopan a*: *a Napoli*. Leonardo has done the same in two passages treating on some secrets of his art Nos. 641 and 729, the only other places in which we find this cipher employed; we may therefore conclude that it was for the sake of secrecy that he used it.

There can be no doubt, from the tenor of this passage, that Leonardo projected a secret excursion to Naples. Nothing has hitherto been known of this journey, but the significance of the passage will be easily understood by a reference to the following notes, from which we may infer that Leonardo really

had at the time plans for travelling further than Naples. From lines 3, 4 and 7 it is evident that he purposed, after selling every thing that was not easily portable, to leave a chest in the care of his relations at Vinci. His luggage was to be packed into two trunks especially adapted for transport by mules. The exact meaning of many sentences in the following notes must necessarily remain obscure. These brief remarks on small and irrelevant affairs and so forth are however of no historical value. The notes referring to the preparations for his journey are more intelligible.

2. *Libro di Vitolone* see No. 1506 note.

7 and fol. It would seem from the text that Leonardo intended to have instructions in painting on paper. It is hardly necessary to point out that the Art of illuminating was quite separate from that of painting.

e la sua cassetta de' colori; inpar la tempera delle carnagioni, inpara ¹⁰a disoluere la lacca gommata, lin del seme, de e dele . . . biäche, ¹¹delli agli da Piacētia, toglì 'De Pōderibus,' tolli l'opere di Leonardo cremo¹²nese; leua il fornello ¹³. della ¹⁴semēza de ligli ¹⁵e dell'erba stella, ¹⁶delle zuche marine, ¹⁷vēdi l'asse della sosta, ¹⁸fatti dare la ¹⁹a chi la rubò, pi²⁰glia il liuellare, ²¹quāto terreno può ²²cauare l'omo in un di.

salt, and how to make tinted paper; sheets of paper folded up; and his box of colours; learn to work flesh colours in tempera, learn to dissolve gum lac, linseed white, of the garlic of Piacenza; take '*de Ponderibus*'; take the works of Leonardo of Cremona. Remove the small furnace seed of lilies and of . . . Sell the boards of the support. Make him who stole it, give you the learn levelling and how much soil a man can dig out in a day.

1410. *Caravaggio*, a village not far from the Adda between Milan and Brescia, where Polidoro and Michelangelo da Caravaggio were born. This note is given in facsimile on Pl. XIII, No. 1 (above, to the left). On Pl. XIII, No. 2 above to the right we read *cerovazo*.

1413. This note is written between lines 23 and 24 of the text No. 710. Corduso, Cordusio (*curia ducis*) = Cordus in the Milanese dialect, is the name of a Piazza between the Via del Broletto and the Piazza de' Mercanti at Milan. In the time of il Moro it was the centre of the town. The persons here named were members of the noble Milanese family de' Fossani; Ambrogio da Fossano, the contemporary painter, had no connection with them.

1414. l. 4—10. This passage evidently refers to

events in Milan at the time of the overthrow of Ludovico il Moro. Amoretti published it in the *Memorie Storiche* and added copious notes.

6. *Visconti*. *Chi fosse quel Visconte non sapremmo indovinare fra tanti di questo nome. Arluno narra che allora atterrate furono le case de' Viconti, de' Castiglioni, de' Sanseverini, e de' Botta e non è improbabile che ne fossevo insultati e morti i padroni. Molti Visconti annovera lo stesso Cronista che per essersi ralleggrati del ritorno del duca in Milano furono da' Francesi arrestati, e strascinati in Francia come prigionieri di stato; e fra questi Messer Francesco Visconti, e suo figliuolo Battista.* (AMORETTI, *Mem. Stor.* XIX.)

8. *Borgonzio o Bruzonzio Botta fu regolatore delle ducali entrate sotto il Moro, alla cui fuga la casa sua fu pur messa a sacco da' partitanti francesi.* (AMORETTI, l. c.)

1443. *Alessandro Farnese*, afterwards Pope Paul III
 was created in 1493 Cardinal di San Cosimo e San
 Damiano, by Alexander VI.

1444. I. *Pandolfino, Agnolo*, of Florence. It is to
 this day doubtful whether he or L. B. Alberti was
 the author of the famous work '*Del Governo della
 Famiglia*'. It is the more probable that Leonardo
 should have meant this work by the words *il libro*,
 because no other book is known to have been
 written by Pandolfino. This being the case this al-
 lusion of Leonardo's is an important evidence in

favour of Pandolfino's authorship (compare No. 1454,
 line 3).

7. The works of Lactantius were published
 very often in Italy during Leonardo's lifetime. The
 first edition published in 1465 "*in monastero
 sublacensi*" was also the first book printed in
 Italy.

15. *Sansovino, Andrea*—the sculptor; 1460—1529.

25. Leonardo here probably alludes to the map,
 not executed by him (See p. 224), which is with the
 collection of his MSS. at Windsor, and was publi-
 shed in the *Archaeologia* Vol. XI (see p. 224).

C. A. 145a; 432a]

1445.

¶ Di quel di Pavia si lauda · piv · il movi-
mēto · che nessun altra cosa;—

¶² L'imitatione · delle cose · antiche · è
piv laudabile · che quella delle · moderne;—

¶³ Nō può essere bellezza · e vtilità ·
come appare nelle fortezze · e nelli omini; ¶

¶⁵ Il trotto · è quasi di qualità di cavallo
libero;—

¶⁶ Doue · manca · la vivacità naturale, bi-
sogna farne una accidētale. ¶

In that at Pavia the movement is more
to be admired than any thing else.

The imitation of antique work is better
than that of the modern things.

Beauty and utility cannot exist together,
as seen in fortresses and in men.

The trot is almost the nature of the free
horse.

Where natural vivacity is lacking it must
be supplied by art.

1450. 1. *Giuliano Gondi*. Ser Piero da Vinci, Leonardo's father, lived till 1480, in a house belonging to Giuliano Gondi. In 1498 this was pulled down to make room for the fine Palazzo built on the Piazza San Firenze by Giuliano di San Gallo, which still exists. In the *Riassunto del Catasto di Ser Piero da Vinci*, 1480, Leonardo is not mentioned; it is evident therefore that he was living elsewhere. It may be noticed incidentally that in the *Catasto di Giuliano Gondi* of the same year the following mention is made of his four eldest sons:

*Lionardo mio figliuolo d'età d'anni 29, non fa nulla,
 Giovambatista d'età d'anni 28 in Ghostantinopoli,
 Billichozo d'età d'anni 24 a Napoli,
 Simone d'età d'anni 23 in Ungheria.*

He himself was a merchant of gold filigree (*facciamo lavorare una bottega d'arte di seta . . . facciamo un pocho di traffico a Napoli*). As he was 59 years old in 1480, he certainly would not have been alive at the time of Leonardo's death. But Leonardo must have been on intimate terms with the family till the end of his life, for in a letter dated June 1. 1519, in which Fr. Melzi, writing from Amboise, announces

Leonardo's death to Giuliano da Vinci at Florence (see p. 284), he says at the end "*Datemene risposta per i Gondi*" (see UZIELLI, *Ricerche*, passim).

Most of the other names on the list are those of well-known Florentine families.

1452. See No. 844, note, p. 130.

1453. In July 1506 Pope Julius II gave Donna Lucrezia della Rovere, the daughter of his sister Lucchina, in marriage to the youthful Marcantonio Colonna, who, like his brothers Prospero and Fabrizio, became one of the most famous Captains of his family. He gave to him Frascati and made him a present of the palazzo he had built, when Cardinal, near the church of Santi Apostoli which is now known as the Palazzo Colonna (see GREGOROVIVS, *Gesch. der Stadt Rom*. Vol. VIII, book XIV 1, 3. And COPPI, *Mem. Colonesi* p. 251).

1454. Much of No. 1444 is repeated in this memorandum.

2. Vasari states that Leonardo invented mechanical birds which moved through the air. Compare No. 703.

Notes on pupils (1458—1468.)

Jacomo venne a stare con meco jl di della Maddalena nel mille 490, d'età d'anni 10; ²Il secondo di li feci tagliare 2 camicie, uno pajo di calze e vn giubbone, e quādo mi posi i dinari al lato per pagare dette cose lui mi *lire 4* ³detti dinari dalla scarsella, e mai fu possibile farli le confessare, bench'io n'avessi vera cierterza;—ladro, bugiardo, ostinato, ghiotto. —

⁴Il di seguente andai a ciena con Iacomo, Andrea e detto Iacomo; cienò per 2 e fece male per 4, inperochè rupe 3 ampolline, ⁵versò il uino, e dopo questo venne a ciena doue me . . .

⁶Itē a di 7 di settēbre rubò uno grafio di valuta di 22 soldi a Marco che staua con meco, jl quale era *lire 4* ⁷d'argiēto e tolse gli lo dal suo studiolo, e poi che detto Marco n'ebbe assai ciercato, lo trovò na⁸scosto in nella cassa di detto Iacomo *lire 4*.

Giacomo came to live with me on St.-Mary Magdalen's[1] day, 1490, aged 10 years. The second day I had two shirts cut out for him, a pair of hose, and a jerkin, and when I put aside some money to pay for these things he stole *4 lire* the money out of the purse; and I could never make him confess, though I was quite certain of the fact.—Thief, liar, obstinate, glutton.

The day after, I went to sup with Giacomo Andrea, and the said Giacomo supped for two and did mischief for four; for he brake 3 cruets, spilled the wine, and after this came to sup where I . . .

Item: on the 7th day of September he stole a silver point of the value of 22 soldi from Marco [6] who was living with me, *4 lire* this being of silver; and he took it from his studio, and when the said Marco had searched for it a long while he found it hidden in the said Giacomo's box *4 lire*.

1456. This fragmentary note is written on the margin of a drawing of two legs.

1457. This note occurs on a pen and ink-drawing made by Leonardo as a sketch for the celebrated large cartoon in the possession of the Royal Academy of Arts, in London. This cartoon is commonly supposed to be identical with that described and lauded by Vasari, which was exhibited in Florence at the time and which now seems to be lost. Mr. Alfred Marks, of Long Ditton, in his valuable paper (read before the Royal Soc. of Literature, June 28, 1882) "On the St. Anne of Leonardo da Vinci", has adduced proof that the cartoon now in the Royal Academy was executed earlier at Milan. The note here given, which is written on the sheet containing the study for the said cartoon, has evidently no

reference to the drawing on which it is written but is obviously of the same date. Though I have not any opening here for discussing this question of the cartoon, it seemed to me important to point out that the character of the writing in this note does not confirm the opinion hitherto held that the Royal Academy cartoon was the one described by Vasari, but, on the contrary, supports the hypothesis put forward by Mr. Marks.

1458. *Il di della Maddalena.* July 22.

6. *Marco*, probably Leonardo's pupil Marco d'Oggionno; 1470 is supposed to be the date of his birth and 1540 of his death.

Che stava con meco. We may infer from this that he left the master shortly after this, his term of study having perhaps expired.

⁹Item a dì 26 di gienaro seguēte, essendo io in casa di messer Galeazzo da San Severino a ordinare la festa ¹⁰della sua giostra, e spogliandosi certi staffieri per prouarsi alcune vesti d'omini saluatici ch'a detta *lire 2 S 4*

¹¹festa accadeano, Giacomo s'accosto alla scarsella d'uno di loro, la qual era ī sul letto con altri panni, ¹²e tolse quelli dinari che dētro vi trovò.

¹³Itē essendomi da maestro Agostino da Pauia donato in detta casa una pelle turchesca da fare uno *lire 2.*

¹⁴pajo di stiualetti, esso Giacomo infra uno mese me la rubò, e vendè la a uno conciatore di ¹⁵scarpe per 20 soldi, de' quali danari secondo che lui propio mi cōfessò, ne cōprò anici cōfetti;

¹⁶Itē ancora a dì 2 d'aprile, lasciādo Giā Antonio uno grafio d'argiēto sopra uno suo disegno, ¹⁷esso Giacomo gli lo rubò, il qual era di ualuta di soldi 24 *lira 1^a S 4.*

¹⁸Il primo ¹⁹anno

²⁰v̄ mātello, lire 2

²¹camicie 6, lire 4

²²3 givboni, lire 6

²³4 paja di calze lire, 7 S 8

²⁴vestito foderato, lire 5

²⁵24 paja di scarpe, lire 6 S 5

²⁶vna baretta, lire 1

²⁷strìge lire, 1.

Item: on the 26th January following, I, being in the house of Messer Galeazzo da San Severino [9], was arranging the festival for his jousting, and certain footmen having undressed to try on some costumes of wild men for the said festival, Giacomo went to the purse of one of them which lay on the bed with other clothes, 2 *lire 4 S*, and took out such money as was in it.

Item: when I was in the same house, Maestro Agostino da Pavia gave to me a Turkish hide to have *2 lire.* a pair of short boots made of it; this Giacomo stole it of me within a month and sold it to a cobbler for 20 soldi, with which money, by his own confession, he bought anise comfits.

Item: again, on the 2nd April, Giovan Antonio [16] having left a silver point on a drawing of his, Giacomo stole it, and this was of the value of 24 soldi *1 lira 4 S.*

The first year—

A cloak, 2 lire,

6 shirts, 4 lire,

3 jerkins, 6 lire,

4 pairs of hose, 7 lire 8 soldi,

1 lined doublet, 5 lire,

24 pairs of shoes, 6 lire 5 soldi,

A cap, 1 lira,

laces, 1 lira.

1465. 2. *Giovan*; it is not likely that Leonardo should have called Giovan' Antonio Beltraffio at one time Giovanni, as in this note and another time Antonio, as in No. 1464 while in No. 1458 l. 16 we find *Giovan' Antonio*, and in No. 1436, l. 6 *Beltraffio*. Possibly the Giovanni here spoken of is Leonardo's less known pupil Giovan Pietrino (see No. 1467, 5).

2. 3. *Francesco de' Melsi* is often mentioned, see Nos. 1350.

3. *Salai*. See No. 1519 note.

4. *Lorenzo*. See No. 1351, l. 10 (p. 408). Amoretti gives the following note in *Mem. Stor. XXIII*: 1505. *Martedì—sera a dì 14 d'aprile. Venne Lorenzo a stare con mecho: disse essere d'età d'anni 17 . . a dì 15 del detto aprile ebbi scudi 25 d'oro dal chamerlingo di Santa Maria nuova.* This, he asserts is derived from a MS. marked S, in quarto. This MS. seems to have vanished and left no trace behind; Amoretti himself had not seen it, but copied from a selection of

extracts made by Oltrocchi before the Leonardo MSS. were conveyed to Paris on the responsibility of the first French Republic. Lorenzò, by this, must have been born in 1487. The sculptor Lorenzetto was born in 1490. Amoretti has been led by the above passage to make the following absurd observations:

Cotesto Lorenzo, che poi gli fu sempre compagno, almeno sin che stette in Italia, sarebb'egli Lorenzo Lotto bergamasco? Sappiamo essere stato questo valente dipintore uno de' bravi scolari del Vinci (?)

Il Fāfoia, perhaps a nickname. Cesare da Sesto, Leonardo's pupil, seems to have been in Rome in these years, as we learn from a drawing by him in the Louvre.

1466. This seems to be an account for two assistants. The name of the second is scarcely legible. The year is not given. The note is nevertheless of chronological value. The first line tells us the date when the note was registered, JANUARY 3^d, and the

observations that follow refer to events of the previous month 'of last year' (*dell'anno passato*). Leonardo cannot therefore have written this in Florence where the year was, at that period, calculated as beginning in the month of March (see Vol. I, No. 4, note 2). He must then have been in Milan. What is more important is that we thus learn how to date the beginning of the year in all the notes written at Milan. This clears up Uzielli's doubts: *A Milano facevasi cominciar l'anno ab incarnatione, cioè il 25 Marzo e a nativitate, cioè il 25 Decembre. Ci sembra probabile che Leonardo dovesse prescegliere lo stile che era in uso a Firenze.* (*Ricerche*, p. 84, note.)

1467. 5. See No. 1465, 2.

1469. The late Marchese Girolamo d'Adda published a highly valuable and interesting disquisition on this passage under the title: *Leonardo da Vinci e la sua Libreria, note di un bibliofilo* (Milano 1873. *Ed. di soli 75 esemplari*; privately printed). In the autumn of 1880 the Marchese d'Adda showed me a considerable mass of additional notes prepared for a second edition. This, as he then intended, was to come out after the publication of this work of mine. After the much regretted death of the elder Marchese, his son, the Marchese Gioachino d'Adda was so liberal as to place these MS. materials at my disposal for the present work, through the kind intervention of Signor Gustavo Frizzoni. The following passages, with the initials G. d'A. are prints from the valuable notes in that publication, the MS. additions I have marked*. I did not however think myself justified in reproducing here the acute and interesting observations on the contents of most of the rare books here enumerated.

1. "*La nobel opera de arithmethica ne la qual se tractate tutte cosse amercentia pertinente facta & compilata per Piero borgi da Venesia*", in-4°. In fine: "*Nela inclita cita di Venetia a corni. 2 agosto. 1484. fu imposto fine ala presente opera.*" Segn. a—p. quaderni. V'ha però

un'altra opera simile di Filippo Calandro, 1491. È da consultarsi su quest'ultimo, Federici: *Memorie Trevigiane, Fiore di virtù*: pag. 73. "*Libricciuolo composto di bello stile verso il 1320 e più volte impresso nel secolo XV (ristampato poi anche più tardi). Gli accademici della Crusca lo ammettono nella serie dei testi di lingua. Le edizioni a stampa sono le seguenti: La prima: "Roberti Valturii de re militari, libri XII ad Sigismundum Pandulfum Malatestam . . . Johannes ex Verona oriundus: Nicolai cyrugiae medici filius: Artis impressorie magister: hunc de re militari librum elegantissimum; litteris, & figuratis signis sua in patria primus impressit. An. M. CCCCLXXII." in-fol. senza numerazione.

La seconda edizione è di Bologna, 1483, ristampata a Parigi nel 1532, e poi nuovamente nel 1533. Paolo Ramusio la volgeva in italiano e la pubblicava di nuovo in Verona coi tipi del Paganino, sempre in-fol., 1483 (le stampe di formato più piccolo), e Luigi Meisret la traduceva in lingua francese nel 1555 a Parigi.

"Mediolani per Leon. Pachel & Ultric. Scinzenzeler 1484" in-4°.—

5—7. Abbiamo varie versioni delle *Deche* di Tito Livio, impresse nel secolo XV. Il "Tito Livio volgarizzato (da Ruggiero Ferario) Roma Uldarico Gallo nel 1476," un tom. in 3 vol. in-fol. "Bologna per maestro Antonio da Bologna 1478," piccolo in-fol. "Venetia Octaviano Scoto 1481," pic. in-fol. Venetia Bartholomeo de Alexandria & Andrea de Asula 1485. Bartholomeo de Zanis, 1490, ecc." Vedasi il *Manuel* del Brunet o meglio il *Repertorium* dell'Hain ed il Panzer. (G. D'A.)

5. "Arnaldi de Villanova & Johannis Mediolanensis Regimen sanitatis Salernitanum, 1480," in-4° ovvero "Tractato utilissimo circa la conservatione de la sanitade, ecc. composto per il clarissimo ed eccellente philosopho & doctore di medicina messer Ugo Benzo di Siena, ecc." in-4°, caratteri gotici senza numeri e senza nome di tipografo. In fine: "Exactum est hoc opus Mli (Mediolani) cura & diligentia Petri de Corneno Mediolanensis, 1481. pridie kalendas Junias. Johanne Galeatio Sforcia Vicecomite principe nostro invictissimo dominante." V. Sassi-Argelati. Parte I, vol. I, p. DLXXV. (G. D'A.)

6. *L'Acerba* (da *acervus*, cumulo), il noto poema di Francesco Stabili, astrologo nemico dell'Alighieri. Numerose edizioni del secolo XV e XVI. È una vera enciclopedia in versi, ripiena di idee arditissime e che valsero all' infelice pensatore il rogo nel 1347. In questo poema trovansi delineate le origini di molti trovati moderni, ed in particolare della circolazione del sangue, due secoli prima del Michele Serveto. Della prima edizione di Brescia Ferrandus s. a. in-fol. non si conosce che un solo esemplare nella Spenceriana. V. Dibdin. (G. D'A.)

7. "Incomenza el libro chiamato della vita ecc., cōposto per Alberto magno filosofo excellentissimo ecc. Napoli

Bernardini de gerardinis de Amelia, 1478," in-4°. Altra edizione di "Bologna per Bazalino di Bazalero, 1493," in-4° got. (G. D'A.)

8. Forse "Guido dalle Colonne" detto anche "da Cauliaco." "Guidonis de Cauliaco Cyrurgia. Turra de Castello recepta atque balnei de Porecta ecc. Venetiis mandato & expensis Octaviani Scoti cura & arte Boneti Locatelli, 1498" in-fol. got.: rarissimo trattato di chirurgia. Ebbe traduzioni francesi parecchie e nel secolo XV anche una versione italiana s. l. n. a. ed un'altra in lingua castigliana nel 1498. Vedi: Brunet, Panzer, Hain e Mendez. —L. Guil. de Saona rhetorica nova, S. Albano, in-4° 1480 (Laurentius Guilelmus). È libro de' più rari (Brunet, Tomo V, col. 137). S. Albans, Albani Villa, Verulanium, Borgo inglese nella contea di Hertfordshire, la patria di Bacone Francesco. (G. D'A.)

9. *De agricultura*. "Il libro della agricultura di Pietro Crescentio," prima edizione di questa versione italiana scritta nel trecento e testo di lingua citato dall'Accademia della Crusca. "Florentie per me Nicholaum Laurentii alemanum diocesis uratislaviensis anno M.CCCC.LXXXVIII." in-fol. — Cibdone: Le materie trattate in questo singolarissimo libretto sono: dei frutti, delle erbe, della flebotomia, della medicina, della luxuria, del bagno, ecc. Almansor-ebn-Isahck fu governatore del Chorassan ed al suo nome intitolava Raee i suoi dodici libri di medicina, che in compendio contengono tutto il sistema medico degli Arabi. Quest'ultima edizione in-4°. Brescia per d. Bapt. de Farfengo, si compone di sei carte s. n. 2. o seg. caratteri semigotici a 2 col. (G. D'A.)

10. *Quadriregio* (libro chiamato il) di Federigo Frezzi domenicano. È poema religioso-morale-scientifico in terzine. Fra gli imitatori della Divina Comedia è dei migliori "non indegno di gir dietro a Dante" dice il Quadrio. Questo poema è in oggi ingiustamente negletto e quasi sconosciuto, ancorchè in tempi da noi lontani fosse stato nobilmente stampato più volte. Ebbe almeno sette edizioni dal 1481 al 1515, e contiene bellezze di primo ordine. "L'edizione che con molta probabilità era fra i libri di Leonardo riteniamo quello di Milano 1488 Zaroto. Un esemplare all'Ambrosiana fra i quattrocentisti donati da G. Porro; — forse più rara che molte altre.

"Fabulae de Esopo historiate," in-4° fig. senza nota di tempo e di luogo; o l'edizione di Venezia per Manfreda da Monferrato, in-4° fig. 1481 e 1490; od anche: "Brescia per Boninum de Boninis 1487," in-4° con 67 belle figure silografiche; "Roma, Silber 1483," Venetia Manfreda Bo-

nello da Streno, 1497, in-4°, ecc., o più probabilmente: "Aesopi" vita & fabulae latinae cum versione italica & allegoriis Fr. Tuppi impressa, Napoli, 1483," in-fol., rara edizione ornata di belle vignette incise in legno. Questo Esopo è anche libro di novelle. Nel Catalogo Cicognara abbiamo una minuta descrizione di questo rarissimo volume. (G. D'A.)

11. "Donatus latinae & italicae: Impresum Venetiis impensis Johannis Baptistae de Sessa anno 1499, in-4°".— "El Psalterio de David in lingua volgare (da Malermi Vendita nel M.CCCC.LXXVI," in-fol. s. n. (G. D'A.)

12. Compare No. 1210, 48.—La versione di Girolamo Squarazfco: "Il libro di Justino posto diligentemente in materna lingua. Venetia ale spese (sic) di Johāne de Colonia & Johāne Gheretz... 1477," in-fol.— "Marsili Ficini, Theologia platonica, sive de animarum immortalitate, Florentine, per Ant. Misonimum 1482," in-fol., ovvero qualche versione italiana di questo stesso libro, ms. (G. D'A.)

13. Forse "la Historia Trojana Guidonis," od il "manipulus" di "Guido da Monterocherū," ma più probabilmente "Guido d'Arezzo," il di cui libro: "Micrologus, seu disciplina artis musicae" poteva da Leonardo averi ms.; di questi ne esistono in molte biblioteche, e fu poi impresso nel 1784 dal Gerbert.

Molte sono le edizioni dei sonetti di Burchiello Fiorentino, impresse nel secolo XV. La prima e più rara e ricercata: "Incominciano li sonetti, ecc. (per Christoforo Arnaldo)," in-4° senza numeri, richiami o segnature, del 1475, e fors'anche del 1472, secondo Morelli e Dibdin, ecc. (G. D'A.)

14. Versione italiana det "Doctrinal de Sapience" di Guy de Roy, e. fors'anche l'originale in lingua francese.—

Di Pulci Luigi, benchè nell'edizione: "Florentiae 1479" in-4° si dica: "Il Driadeo composto in rima octava per Lucio Pulero," Altre ediz. del secolo XV, "Florentie Miscominimi 1481, in-4°, Firenze, apud S. Jacob. de Ripoli, 1483," in-4° e "Antoni de Francesco, 1487," in-4° e Francesco di Jacopo 1489," in-4° ed altre ancora di Venezia e senza alcuna nota ecc. (G. D'A.)

15. Una delle edizioni del Morgante impresse nel secolo XV, ecc.—

Quale delle opere di Francesco Petrarca, sarebbe malagevole Pindovinare, ma probabilmente il Canzoniere. (G. D'A.)

16. Sono i viaggi del cavaliere "Mandeville," gentiluomo inglese. Scrisse il suo libro in lingua francese. Fu stampato replicatamente nel secolo XV in francese, in inglese ed in italiano, ed in tedesco; del secolo XV ne annoverano forse più di 27 edizioni, di cui ne conosciamo 8 in francese, quattro in latino, sei in tedesco e molte altre in volgare. (G. D'A.)

17. Il Platina (Bartolomeo Sacchi) la versione italiana "de la honesta voluptate, & valetudine (& de li obsonni) Venetia (senza nome di tipografo) 1487," piccolo in-4° gotico. (G. D'A.)—Compare No. 844, 21.

18. Il Manganello: Satira eccessivamente vivace contro le donne ad imitazione della Sesta di Giovenale. Manganello non è soltanto il titolo del libricino, sua ben anche il nome dell'autore ch'era un "milanese". Di questo libereolo rarissimo, che sembra impresso a Venezia dallo Zoppino (Nicold d'Aristotile detto il), senza data, ma dei primissimi anni del secolo XVI, e forse più antico, come vedremo in appresso, non se ne conoscono fra biblioteche pubbliche e private che due soli esemplari in Europa. (G. D'A.)

19. "Cronica desidero", sembra si deggia leggere piuttosto "cronico disidoro"; ed in questo caso s'intenderebbe la "cronica d'Isidoro" tanto in voga a quel tempo "Comença la Cronica di Sancto Isidoro menore con alcune additione cavate del testo & istorie de la Biblia & del libro di Paulo Oroso . . . Impresso in Ascoli in casa del reverendo misser Pascale . . . per mano di Guglielmo de Linis de Alamania M.CCCC.LXXVII" in-4° di 157 ff. È il primo libro impresso ad Ascoli e l'edizione principe di questa cronica in oggi assai rara. Non lo è meno l'edizione di Civald del Friuli, 1480, e quella ben anche di Aquila, 1482, sempre in-4°. Vedasi Panzer, Hain, Brunet e P. Dechamps. (G. D'A.)

20. "Le pistole di Ovidio tradotte in prosa. Napoli Sixt. Riessinger", in-4°, oppure: "Epistole volgarizzate 1489," in-4° a due col. "imprese ne la cita (sic) di Bressa per pre: Baptista de Farfengo," (in ottave) o: "El libro dele Epistole di Ovidio in rima volgare per messere Dominico de Monticelli toscano. Brescia Farfengo," in-4° got. (in rima volgare), 1491, ed anche la versione di Luca Pulci. Firenze, Miscominimi, 1481, in-4°. (G. D'A.)

21. See l. 4.

22. "Jo: de Sacrobusto," o "Goro Dati," o "Tolosono da Colle" di cui molteplici edizioni del secolo XV. (G. D'A.)

23. Tre edizioni delle facezie del Poggio abbiamo in lingua italiana della fine del secolo XV, tutte senza data. "Facietie di Poggio fiorentino traducte de latino in vulgare ornatissimo," in-4^o, segn. a—e in caratteri romani; l'altra: "Facietie traducte de latino in vulgare," in-4^o, caratteri gotici, ecc. (G. D'A.)

24. *"Die Kunst Cyromantia etc. in tedesco. 26 ff. di testo e figure il tutte esequito sù tavole di legno verso la fine del secolo XV da Giorgio Schaffff". Dibdin, Heineken, Sotheby e Chittio ne diedero una lunga descrizione; i primi tre accompagnati da fac-simili. La data 1448 che si legge alla fine del titolo si riferisce al periodo della composizione del testo, non à quello della stampa del volume benchè tabellario. Altri molti libri di Chiromanzia si conoscono di quel tempo e sarebbe opera vana il citarli tutti. (G. D'A.)

25. Miniatore Bartolomeo. "Formulario de epistole vulgare missive e responsive, & altri flori de ornatì parlamenti al principe Hercule d'Esti ecc. composto ecc. Bologna per Ugo di Rugerii," in-4^o, del secolo XV. Altra edizione di "Venètia Bernardino di Novara, 1487" e "Milano per Joanne Angelo Scinzenzeler 1500," in-4^o. (G. D'A.)

Five books out of this list are noted by Leonardo in another MS. (Tr. 3): donato, — lapidario, — plinio, — abacho, — morgante.

1470. Nonius Marcellus and Sextus Pompeius Festus were Roman grammarians of about the fourth century A. D. Early publications of the works of Marcellus are: *De proprietate sermonis, Romae* (about 1470), and 1471 (place of publication unknown). *Compendiosa doctrina, ad filium, de proprietate sermonum*. Venice, 1476. BRUNET, *Manuel du libraire* (IV, p. 97) notes: *Le texte de cet ancien grammairien a été réimprimé plusieurs fois à la fin du XV^e siècle, avec ceux de Pomponius Festus et de Terentius Varro. La plus ancienne édition qui réunisse ces trois auteurs est celle de Parme, 1480 . . . Celles de Venise, 1483, 1490, 1498, et de Milan, 1500, toutes in-fol., ont peu de valeur.*

1472. 1. Compare No. 1113, 25.

2. *Vitruvius de Arch., et Frontinus de Aqueductibus*. Florence, 1513.—This is the earliest edition of Frontinus.—The note referring to this author thus suggests a solution of the problem of the date of the Leicester Manuscript.

1474.

Archimede del uescouo ³di Padoua.

The Archimedes belonging to the Bishop of Padua.

W. 1912]

1475.

Archimede à dato la ²□ra d'una figura late³rata e nō del cerchio; ¶⁵adunque Archimede non ⁷quadrò mai figu⁸ra di lato curuo; ¶⁹ciòè quadrò il cer¹⁰chio meno una portio¹¹ne tanto minima quā¹²to lo intelletto possa immaginare, cioè quanto il pūto visibile.

Archimedes gave the quadrature of a polygonal figure, but not of the circle. Hence Archimedes never squared any figure with curved sides. He squared the circle minus the smallest portion that the intellect can conceive, that is the smallest point visible.

Br. M. 2798]

1476.

Chi auesse trovato l'ultima vali²tudine della bōbarda in tutte ³sua varietà, e presētato tale ⁴segreto alli Romani, cō ⁵qual prestezza avrebbero conquista⁶to ogni terra e superato ogni ese⁷rcito, e qual premio era, ⁸che potesse equipararsi a tanto ⁹benifitio! Archimede ā¹⁰corachè lui auesse grādemēte dan¹¹neggiati li Romani alla spugna¹²tione di Siracusa, nō li fu mai ¹³mācato l'offerta di grādissimi pre¹⁴mi da essi Romani, e nella pre¹⁵sa di Siracusa fu cercato diligē¹⁶temēte d'esso Archimede, e tro¹⁷vato morto; ne fu fatto maggiore ¹⁸lamētatione nel senato e ¹⁹popolo Romano, che s'egli¹⁹ auessi²⁰no perso tutto il loro esercito, e non ²¹mancarono d'onorarlo di sepoltu²²ra e di statua, della quale fu capo ²³Marco Marcello; e dopo la seconda ²⁴ruina di Siragusa fu ritrouato ²⁵da Catone la sepoltura d'esso Archi²⁶mede nel²⁷le ruine d'un tempio; onde Catone fe²⁸cie rifare il tēpio e la sepoltura ²⁹onoratissima. . . ³⁰e di questo si scriue ³¹auere detto Catone ³²non si gloriar di ³³nessuna cosa tan³⁴to, quanto d'auere ³⁵onorato esso Archi³⁶mede d'esso orna³⁷mēto.

If any man could have discovered the utmost powers of the cannon, in all its various forms and have given such a secret to the Romans, with what rapidity would they have conquered every country and have vanquished every army, and what reward could have been great enough for such a service! Archimedes indeed, although he had greatly damaged the Romans in the siege of Syracuse, nevertheless did not fail of being offered great rewards from these very Romans; and when Syracuse was taken, diligent search was made for Archimedes; and he being found dead greater lamentation was made for him by the Senate and people of Rome than if they had lost all their army; and they did not fail to honour him with burial and with a statue. At their head was Marcus Marcellus. And after the second destruction of Syracuse, the sepulchre of Archimedes was found again by Cato [25], in the ruins of a temple. So Cato had the temple restored and the sepulchre he so highly honoured. . . . Whence it is written that Cato said that he was not so proud of any thing he had done as of having paid such honour to Archimedes.

1476. Where Leonardo found the statement that Cato had found and restored the tomb of Archimedes, I do not know. It is a merit that Cicero claims as his own (Tusc. V, 23) and certainly with a full right to it. None of Archimedes' biographers—not even the diligent Mazzucchelli, mentions any version in which Cato is named. It is evidently a

slip of the memory on Leonardo's part. Besides, according to the passage in Cicero, the grave was not found 'nelle ruine d'un tempio'—which is highly improbable as relating to a Greek—but in an open spot (H. MÜLLER-STRÜBING).—See too, as to Archimedes, No. 1417.

Leonardo says somewhere in MS. C.A.: *Architronito è una macchina di fino rame, invenzion d'Archimede* (see 'Saggio', p. 20).

CORNELIO CELSO.

CORNELIUS CELSUS.

²Il soṃo · bene · è la sapiēza ; il soṃo male · è il dolore · del corpo; ṃperochè, essēdo ³noi composti · di 2 cose, cioè · d' anima · e di corpo, ⁴delle quali la prima · è migliore ·, la peggiore · è il corpo; la sapiētia è ⁵della miglior parte ; il sommo male è della peggiore parte e pessima; Ottima cosa è nell'animo la sapiēza, così è pessima ⁶cosa nel corpo il dolore; ⁷adūque, sicome il sommo male è 'l corporal dolore, così la sapiētia è dell'animo ⁸il soṃo bene, cioè dell'uomo sagio, e nissvna altra cosa è da cōparare a questa.

The highest good is wisdom, the chief evil is suffering in the body. Because, as we are composed of two things, that is soul and body, of which the first is the better, the body is the inferior; wisdom belongs to the better part, and the chief evil belongs to the worse part and is the worst of all. As the best thing of all in the soul is wisdom, so the worst in the body is suffering. Therefore just as bodily pain is the chief evil, wisdom is the chief good of the soul, that is with the wise man; and nothing else can be compared with it.

Tr. 57]

1487.

Demetrio solea dire non essere differētia · dalle parole e voci dell'inperiti igniorāti, ²che sia da suoni e strepiti · cavati dal ventre ripieno di superfluo vēto; ³e questo nō senza cagiō dicea, ṃperochè lui nō reputava esser differētia da qual parte ⁴costoro mādassino · fuora la voce, o dalle parti ṃferiori o dalla bocca, ⁵che l'una' e l'altra era di pari valimēto e sustātia.

Demetrius was wont to say that there was no difference between the speech and words of the foolish and ignorant, and the noises and rumblings of the wind in an inflated stomach. Nor did he say so without reason, for he saw no difference between the parts whence the noise issued; whether their lower parts or their mouth, since one and the other were of equal use and importance.

K. 2 2a]

1489.

⁵o Euclide. ²Prima definitione ¶ parte è quantità di quantità ³minore della maggiore, cōciosia⁴chè la minore numeri la mag⁵giore;

⁶Parte propriamēte detta è quella ⁷ch'è multiplicatiua, cioè che, multi⁸plicata per alcuno numero, ricōpo⁹ne il suo tutto con precisione;

¹⁰Parte comune aggregatiua è que¹¹lla, la quale, quantunche volte si pi¹²glia più o meno del suo tutto; ¹³ond'è neciessario che coll'ajuto d'al¹⁴tra quantità diuersa rifaccia il suo ¹⁵tutto, e perciò è detta aggregatiua.

¹⁶Seconda definitione. ¶ La multiplicità è maggiore della mi¹⁷nore, quando la minore misura qu¹⁸ella;

¹⁹Di sopra difinimmo il minore estremo, ²⁰e qui si difinisce il maggiore; La parte

⁵th Book of Euclid. First definition: a part is a quantity of less magnitude than the greater magnitude when the less is contained a certain number of times in the greater.

A part properly speaking is that which may be multiplied, that is when, being multiplied by a certain number, it forms exactly the whole. A common aggregate part.

Second definition. A greater magnitude is said to be a multiple of a less, when the greater is measured by the less.

By the first we define the lesser [magnitude] and by the second the greater is defined. A part is spoken

1498.

Ò ritrovato nele Storie delli Spagnoli
· come · nelle guerre da loro ²avute colli
Inglesì fu Archimede Siracusano, il quale
ī quel tēpo ³dimorava ī cōpagnia di Ecli-
derides, rē de' Cirodastri; Il quale nella
⁴pugna marittima ordinò ·, che ī navili fus-
sino con lunghi arbori, ⁵e sopra le lor
gaggie ⁶collocò · vna · antennetta di lūghez-
za di 40 piè, e ⁷ $\frac{1}{3}$ piè di grossezza; nel
una stremità era vna ancora picciola, nel
al⁸tra · vn contrapeso; al' ancora era appic-
cato 12 piedi ⁹di catena · e dopo essa
catena tāta corda ¹⁰che perveniua dalla
catena al nascimēto della gaggia ch'era
attaccata con una cordella; ¹¹da esso na-
scimēto mādaua ī basso īsino al nascimēto
dell'arbore, ¹²dou'era collocato vn argano
fortissimo, e lì era fermo ¹³il nascimēto
d'essa corda; Ma per tornare all'uftio
d'essa machina ¹⁴dico che sotto a detta
ācora era vno foco, il quale con sommo
stre¹⁵spito gittava ī basso ī sua razzi e pi-
oggia di pegola īfocata, li qua¹⁶li piovēdo
sopra alla gaggia costrignevano li omini,
che lì erano, a ¹⁷abbādonare detta gaggia,
ōde calato l'ancora colle acut ¹⁸quella
cauava ai labri della gaggia; e subito era
tagliata la corda posta ¹⁹al nascimēto della
gaggia a sotenera quella corda ch'ādava
²⁰dal'ācora al'argano, e tirādo il navilio . . .

I have found in a history of the Spaniards
that in their wars with the English Archi-
medes of Syracuse who at that time was living
at the court of Ecliderides, King of the Ciro-
dastri. And in maritime warfare he ordered that
the ships should have tall masts, and that on
their tops there should be a spar fixed [6] of
40 feet long and one third of a foot thick. At
one end of this was a small grappling iron and
at the other a counterpoise; and there was also
attached 12 feet of chain; and, at the end of
this chain, as much rope as would reach from
the chain to the base of the top, where it was
fixed with a small rope; from this base it ran
down to the bottom of the mast where a
very strong spar was attached and to this
was fastened the end of the rope. But to go on
to the use of his machine; I say that below
this grappling iron was a fire [14] which, with
tremendous noise, threw down its rays and
a shower of burning pitch; which, pouring
down on the [enemy's] top, compelled the
men who were in it to abandon the top
to which the grappling-iron had clung. This
was hooked on to the edges of the top
and then suddenly the cord attached at the
base of the top to support the cord which
went from the grappling iron, was cut, giving
way and drawing in the enemy's ship; and
if the anchor—was cast . . .

Messer Vīcentio Aliprādo, che sta ²presso all'osteria dell'Orso, à il Vetru³uo di Iacomo Andrea.

Messer Vincenzo Aliprando, who lives near the Inn of the Bear, has Giacomo Andrea's Vitruvius.

L. 53 δ]

1502.

Dice Vetruvio che i modelli piccoli ²non sono in nessuna operatione confor³mi all'effetto de' grandi; la qual co⁴sa qui disotto intendo dimo⁵stra⁵re tale conclusione · essere falsa, ⁶c massimamente allegando quelli me⁷desimi termini, coi quali lui cō⁸clude tale · sententia, cioè colla ⁹sperientia · della triuella, per la qua le ¹⁰lui mostra essere fatto dalla po¹¹tentia dell'omo vno buso di cier¹²ta quantità di diametro, e che poi ¹³vn buso di duplicato diametro nō ¹⁴sarà fatto da duplicata potentia ¹⁵di detto uomo, ma da molto piv; all'¹⁶a qual cosa si può molto ben rispō¹⁷dere, allegando che il trivello

Vitruvius says that small models are of no avail for ascertaining the effects of large ones; and I here propose to prove that this conclusion is a false one. And chiefly by bringing forward the very same argument which led him to this conclusion; that is, by an experiment with an auger. For he proves that if a man, by a certain exertion of strength, makes a hole of a given diameter, and afterwards another hole of double the diameter, this cannot be made with only double the exertion of the man's strength, but needs much more. To this it may very well be answered that an auger

L. 53 α]

1503.

di duplicata figura non può ²essere mosso da duplicata po³tentia, conciosiachè la superfite ⁴d'ogni corpo di figura simile è di dup⁵plicata quantità alla superfite, di ⁶quadruplicata quātità l'una ⁷all'altra, come mostrano le due ⁸figure · a · e · n.

of double the diameter cannot be moved by double the exertion, because the superficies of a body of the same form but twice as large has four times the extent of the superficies of the smaller, as is shown in the two figures a and n.

OF SQUARING THE CIRCLE, AND WHO IT WAS
THAT FIRST DISCOVERED IT BY ACCIDENT.

Vitruvius, measuring miles by means of the repeated revolutions of the wheels which move vehicles, extended over many Stadia the lines of the circumferences of the circles of these wheels. He became aware of them by the animals that moved the vehicles. But he did not discern that this was a means of finding a square equal to a circle. This was first done by Archimedes of Syracuse, who by multiplying the second diameter of a circle by half its circumference produced a rectangular quadrilateral equal figure to the circle [10].

1506. (*Witelo*, *Vitellion*, *Vitellon*) *Vitellione*. È da vedersi su questo ottico prospettico del secolo XIII Luca Pacioli, Paolo Lomazzo, Leonardo da Vinci, ecc. e fra i moderni il Graesse, il Libri, il Brunet, e le Memorie pubblicate dal principe Boncompagni, e 'Sur l'orthographe du nom et sur la patrie de Wütelo (*Vitellion*) note de Maximilien Curtze, professeur à Thorn', ove sono descritti i molti codici esistenti nelle biblioteche d'Europa. Bernardino Baldi nelle sue 'Vite de' matematici', manoscritto presso il principe Boncompagni, ha una biografia del *Vitellione*. Questo scritto del Baldi reca la data 25 agosto 1588. Discorsero poi di lui Federigo Risnerio e Giovanni di Monteregio nella prefazione dell'Alfagrano, Giovanni Boteone, Girolamo Cardano, 'De subtilitate', che nota gli errori di *Vitellione*. Visse, secondo il Baldi, intorno all'anno 1269, ma secondo il Reinoldo fioriva nel 1299, avendo dedicata la sua opera ad un frate Guglielmo di Monteca, che visse di que' tempi.

Intorno ad un manoscritto dell'ottica di *Vitellione*, citato da Luca Pacioli v'ha un secondo esemplare del Kurtz,

con aggiunte del principe Boncompagni, e le illustrazioni del cav. Enrico Narducci. Nel 'Catalogo di manoscritti' posseduti da D. Baldassare de' principi Boncompagni, compilato da esso Narducci, Roma, 1862, sotto al n. 358, troviamo citato: *Vitellio*, 'Perspectiva', manoscritto del secolo XIV. La 'Prospettiva di Vitellione' (sic) Thuringo-poloni è citata due volte da Paolo Lomazzo nel Trattato dell'arte della pittura. *Vitellio* o *Vitello* o *Wütelo*. Il suo libro fu impresso in foglio a Norimberga nel 1535; la seconda edizione è del 1551, sempre di Norimberga, ed una terza di Basilea, 1572. (See *Indagini Storiche . . . sulla Libreria-Visconteo-Sforzesca del Castello di Pavia . . . per cura di G. D'A.*, Milano 1879. P. I. Appendice p. 113. 114).

1507. Altro codice di cotesta 'Prospettiva' del *Vitellone* troviamo notato nel 'Canone bibliographico di Nicolò V', conservato alla Magliabecchiana, in copia dell'originale verosimilmente inviato dal Parentucelli a Cosimo de' Medici (Magliab. cod. segn. 1 VII, 30 carte da 193 a 198). Proviene dal Convento di San Marco e lo aveva trascritto frate Leonardo Scruberti fiorentino, dell'ordine dei predicatori che fu anche bibliotecario della Medicea pubblica in San Marco (See *Indagini Storiche . . . per cura di G. D'A.* Parte I, p. 97).

1519. This note, of about the year 1494, is the earliest mention of Salai, and the last is of the year 1513 (see No. 1465, 3). From the various notes in the MSS. he seems to have been Leonardo's assistant and keeper only, and scarcely himself a painter. At any rate no signed or otherwise authenticated picture by him is known to exist. Vasari speaks somewhat doubtfully on this point.

1520. This note enables us to fix the date of the Manuscript, in which it is to be found. In 1495 the 4th of September fell on a Friday; the contents of the Manuscript do not permit us to assign it to a much earlier or later date (Compare No. 1522, and Note).

1522. See Nos. 1384 and 1517.

1525.

Ricordo come a dì 8 d'aprile 1503 io
 Leonardo da Vinci prestai a Vāte miⁿia-
 tore ducati 4 d'oro in oro; portògli Salai
 e li dette in sua propia ³mano; disse ren-
 dermile infra lo spatio di 40 giorni;

⁴Ricordo come nel sopradetto giorno
 io rēdei a Salai ducati 3 d'oro, i quali
⁵disse volersene fare vn paio di calze ro-
 sate co' sua fornimēti, e li restai a dare
⁶ducati 9, posto che lui ne de' dare a me
 ducati 20, cioè 17 prestai li a Milano e 3
 a Venezia;

⁷Ricordo come io diedi a Salai braccia
 21 di tela da fare camicie, a S. 10 il brac-
 cio, ⁸le quali li diedi a dì 20 d'aprile
 1503.

Memorandum. That on the 8th day of
 April 1503, I, Leonardo da Vinci, lent to
 Vante, miniature painter 4 gold ducats, in
 gold. Salai carried them to him and gave
 them into his own hand, and he said he would
 repay within the space of 40 days.

Memorandum. That on the same day I
 paid to Salai 3 gold ducats which he said
 he wanted for a pair of rose-coloured
 hose with their trimming; and there remain
 9 ducats due to him—excepting that he owes
 me 20 ducats, that is 17 I lent him at Milan,
 and 3 at Venice.

Memorandum. That I gave Salai 21 brac-
 cia of cloth to make a shirt, at 10 soldi
 the braccio, which I gave him on the
 20th day of April 1503.

C. A. 70 δ; 208 δ]

1526.

La mattina di S^co Pietro a dì 29 di

1525. With regard to Vante or Attavante, the mi-
 niature painter (not Nanni as I formerly deciphered
 this name, which is difficult to read; see *Zeitschrift
 für Bild. Kunst*, 1879, p. 155), and Vasari, *Lives of Frate
 Giovanni da Fiesole*, of Bartolommeo della Gatta,
 and of Gherardo, *miniature*. He, like Leonardo, was

one of the committee of artists who, in 1503, considered
 the erection and placing of Michel Angelo's David.
 The date of his death is not known; he was of the
 same age as Leonardo. Further details will be found
 in *Notizie di Attavante miniatore, e di alcuni suoi lavori?*
 (Milanese's ed. of Vasari, III, 231—235).

1527. In the original, the passage given as No. 1463 is written between lines 2 and 3 of this text, and it is possible that the entries in lines 3 and 4 refer to the payments of Jacopo Tedesco, who is there mentioned. The first words of these lines are very illegible.

7. *Al fattore.* Il Fattore, was, as is well known,

the nick-name of Giovanni Francesco Penni, born in Florence in 1486, and subsequently a pupil of Raphael's. According to Vasari he was known by it even as a boy. Whether he is spoken of in this passage, or whether the word Fattore should be translated literally, I will not undertake to decide. The latter seems to me more probably right.

F. o^o]

1528.

A dì d'ottobre 1508 ebbi scudi 30;
²13 ne prestai a Salai per còpiere la dota
 alla ³sorella, e 17 ne restò a me.

On the day of October, 1508, I had
 30 scudi; 13 I lent to Salai to make up his
 sister's dowry, and 17 I have left.

1547.

Johannes Antonius di Johannes Ambrosius de Bolate; ²Chi perde il tempo e' virtù non aquista; ³quanto più pensa l'animo più s'attrista; ⁴Virtù non ha in potere lo auere; chi lascia onore per acquistare auere; ⁵Non vale fortuna a chi non s'affatica; ⁶Colui si fa felice, che Christum vestiga; ⁷perfecto dono nō s'ha senza gran pena; ⁸Passano nostri triumfi, nostre pompe; ⁹la gola e 'l sonno e l'otiose piume Anno dal mondo ogni virtù sbandita, ¹⁰tal che dal corso suo quasi smarita; Nostra natura è vinta dal costume; ¹¹Ormai conviene così che tu ti spoltri; Disse il maestro che segiendo in piuma, ¹²in fama non si viene, nè sotto coltri, Senza la qual chi sua vita consuma ¹³tal uestigia in terra di se lascia; Qual fumo in aria o nell'acqua la schiuma.

Johannes Antonius di Johannes Ambrosius de Bolate. He who lets time pass and does not grow in virtue, the more I think of it the more I grieve. No man has it in him to be virtuous who will give up honour for gain. Good fortune is valueless to him who knows not toil. The man becomes happy who follows Christ. There is no perfect gift without great suffering. Our glories and our triumphs pass away. Foul lust, and dreams, and luxury, and sloth have banished every virtue from the world; so that our Nature, wandering and perplexed, has almost lost the old and better track. Henceforth it were well to rouse thyself from sleep. The master said that lying in down will not bring thee to Fame; nor staying beneath the quilts. He who, without Fame, burns his life to waste, leaves no more vestige of himself on earth than wind-blown smoke, or the foam upon the sea.

1546-1566. All these texts are written in the ordinary way from left to right.

1547. 1. Ambrosius. 3. pense . . satrista. 4. lassa honore . . aquistare havere. 5. safatica. 6. coluy . . 1546. The meaning of this document, which is very difficult to decipher, and is written in unintelligible Latin, is, that Leonardo di Mansuetis recommends the Rev. Mair of Nustdorf, chaplain at Vienna, to some third person; and says also that something, which had to be proved, has been proved. The rest of the passages on the same leaf are undoubtedly

in Leonardo's hand. (Nos. 483, 661, 519, 578, 392, 582, 887 and 894.)

1547. From the last sentence we may infer that this text is by the hand of a pupil of Leonardo's.—On the same sheet are the notes Nos. 1175 and 715 in Leonardo's own handwriting.

1559. 1. canonica (?) didio (?) adi. 2. dileta sorele chome. 4. istro "a" zi maso della violē.

1557. The notes in Greek, Nos. 1557, 1558 and 1562 stand in close connection with each other, but the meaning of some words is very doubtful, and a translation is thus rendered impossible.

1559. AMORETTI, *Mem. Stor. XXIV*, quotes the first three lines of this letter as by Leonardo. The character of the writing however does not favour this hypothesis, and still less the contents. I should regard it rather a rough draft of a letter by young

Melzi. I have not succeeded in deciphering completely the 13 lines of this text. Amoretti reads at the beginning *Canonica di Vaprio*, but *Vaprio* seems to me a very doubtful reading.

1560. These three epigrams on the portrait of Lucrezia Crivelli, a picture by Leonardo which must have been lost at a very early date, seem to have been dedicated to Leonardo by the poet. Leonardo used the reverse of the sheet for notes on geometry.

Hujus quam cernis nomen Lucretia, Divi
 Omnia cui larga contribuere manu.
 Rara huic forma data est; pinxit Leonardus, amavit
 Maurus, pictorum primus hic, ille ducum.

Naturam, ac superas hac laesit imagine Divas
 Pictor: tantum hominis posse manum haec doluit,
 Illae longa dari tam magnae tempora formae,
 Quae spatio fuerat deperitura brevi.

1561. 1. informatione. 2. des cheuaux a(?). 3. de l'escuyeres(?). 5. peintre(?) du Roi P. 6. Amboyse Amboyse. 7. Amboyse Amboyse.

1563. 1. a m "r o" Lionardo dihavere p'sto la nolo stato.

1564. 1. vra ELL"tia". 2. Manini [porte] conduse . . som f. 3. cristallo inporse (?) altre.

1561. 1. *Liber magistri Egidii de pulsibus matrice compositus (cum commentario Gentilis de Fulgineo)* published in 1484 at Padova, in 1494 and in 1514 at Venice, and in 1505 at Lyons.

2. This text appears to be in a handwriting different from that in the note, l. 1. Here the reading is not so simple as AMORETTI gave it, *Mem. Stor. XXV: A Monsieur Lyonard Peintre du Roy pour Amboyse*. He says too that this address is of the year 1509, and Mr. Ravaisson remarks: "*De cette suscription il semble qu'on peut inférer que Léonard était alors en France, à la cour de Louis XII . . . Pour conclure je crois qu'il n'est pas prouvé que Léonard de Vinci n'ait pas fait un voyage de quelques mois en France sous Louis XII, entre le printemps de 1509 et l'automne de 1510.*"—I must

confess that I myself have not succeeded in deciphering completely this French writing of which two words remain to me doubtful. But so much seems to be quite evident that this is not an address of a letter at all, but a certificate or note. *Amboise* [l. 6] I believe to be the signature of Charles d'Amboise the Governor of Milan. If this explanation is the right one, it can be easily explained by the contents of Nos. 1350 and 1529. The note, line 1, was perhaps added later by another hand; and Leonardo himself wrote afterwards on the same sheet some geometrical explanations. I must also point out that the statement that this sheet belongs to the year 1509 has absolutely no foundation in fact. There is no clue whatever for giving a precise date to this note.

Leonardo's
Will.

Sia manifesto ad ciaschaduna persona presente et aduenerc, che nella corte del Re nostro signore in Amboysia avanti de noy personalmente costituito messer Leonardo de Vince pictore del Re, al presente comorante nello locho dicto du Cloux appresso de Amboysia, el qual considerando la certezza dela morte e l'incertezza del hora di quella, ha cognosciuto et confessato nela dicta corte nanzi de noy nela quale s'è somesso e somette circa ciò havere facto et ordinato per tenore dela presente il suo testamento et ordinanza de ultima volontà nel modo qual se seguita. Primeramente el racomanda l'anima sua ad nostro Signore Messer Domine Dio, alla gloriosa Virgine Maria, a Monsignore Sancto Michele, e a tutti li beati Angeli Santi e Sante del Paradiso.

Item el dicto Testatore vole essere sepolito drento la giesia de sancto Florentino de Amboysia et suo corpo essere portato li per li capellani di quella.

Item che il suo corpo sia accompagnato dal dicto locho fin nela dicta giesia de sancto Florentino per il colegio de dicta giesia cioè dal Rectore et Priore, o vero dali Vicarii soy et Capellani della giesia di sancto Dionisio d'Amboysia, etiam li Fratri Minori del dicto locho, et avante de essere portato il suo corpo nela dicta chiesa, esso Testatore, vole siano celebrate ne la dicta chiesa di sancto Florentino tre grandi messe con diacono et sottodiacono, et il di che se diranno dicte tre grandi messe che se dicano anchora trenta messe basse de Sancto Gregorio.

Item nella dicta chiesa de Sancto Dionisio simil servitio sia celebrato come di sopra.

Item nella chiesa de dicti Fratri et religiosi minori simile servitio.

Item el prefato Testatore dona et concede ad Messer Francesco da Melzo, Gentilomo da Milano, per remunerazione de' servitii ad epso grati a lui facti per il pas-

Be it known to all persons, present and to come that at the court of our Lord the King at Amboise before ourselves in person, Messer Leonardo da Vinci painter to the King, at present staying at the place known as Cloux near Amboise, duly considering the certainty of death and the uncertainty of its time, has acknowledged and declared in the said court and before us that he has made, according to the tenor of these presents, his testament and the declaration of his last will, as follows. And first he commends his soul to our Lord, Almighty God, and to the Glorious Virgin Mary, and to our lord Saint Michael, to all the blessed Angels and Saints male and female in Paradise.

Item. The said Testator desires to be buried within the church of Saint Florentin at Amboise, and that his body shall be borne thither by the chaplains of the church.

Item. That his body may be followed from the said place to the said church of Saint Florentin by the *collegium* of the said church, that is to say by the rector and the prior, or by their vicars and chaplains of the church of Saint Denis of Amboise, also the lesser friars of the place, and before his body shall be carried to the said church this Testator desires, that in the said church of Saint Florentin three grand masses shall be celebrated by the deacon and sub-deacon and that on the day when these three high masses are celebrated, thirty low masses shall also be performed at Saint Gregoire.

Item. That in the said church of Saint Denis similar services shall be performed, as above.

Item. That the same shall be done in the church of the said friars and lesser brethren.

Item. The aforesaid Testator gives and bequeaths to Messer Francesco da Melzo, nobleman, of Milan, in remuneration for services and favours done to him in the past, each

1565. 1. XVI° "60" de Ciui"ite" Dei. 2. esse.

sato, tutti et ciaschaduno li libri, che il dicto Testatore ha de presente et altri Instrumenti et Portracti circa l'arte sua et industria de Pictori.

Item epso Testatore dona et concede a sempre mai perpetuamente a Battista de Vilanis suo servitore la metà zoè medietà de uno iardino, che ha fora a le mura de Milano et l'altra metà de epso iardino ad Salay suo servitore nel qual iardino il prefato Salay ha edificata et constructa una casa, la qual sarà e reterà similmente a sempremai perpetudine al dicto Salai, soi heredi et successori, et ciò in remunerazione di boni et grati servitii, che dicti de Vilanis et Salay dicti suoi servitori lui hano facto de qui inanzi.

Item epso Testatore dona a Maturina sua fantescha una veste de bon pan negro foderata de pelle, una socha de panno et doy ducati per una volta solamente pagati: et ciò in remunerazione similmente de boni servitii a lui facti epsa Maturina de qui inanzi.

Item vole che ale sue exequeie siano sexanta torchie, le quali seranno portate per sexanta poveri, ali quali seranno dati danari per portarle a discretione del dicto Melzo le quali torzi seranno divise nelle quattro chiesie sopradicte.

Item el dicto Testatore dona ad ciascheduna de dicte chiesie sopradicte diece libre cera in candeles grosse che saranno messe nelle dicte chiesie per servire al di che se celebreranno dicti servitii.

Item che sia dato ali poveri del ospedale di Dio alli poveri de Sancto Lazaro de Amboisia, e per ciò fare sia dato et pagato alli Tesorieri d'epsa confraternità la summa et quantità de soysante dece soldi tornesi.

Item epso Testatore dona et concede al dicto Messer Francesco Melce presente et acceptante il resto della sua pensione et summa de' danari qual a lui sono debiti del passato fino al di della sua morte per il recevoir, ovvero, Tesaurario general M. Johan Sapin, et tutte et ciaschaduna summe de' danari che ha receputo dal p.^o Sapin de la dicta sua pensione, e in caxo chel decede inanzi al prefato Melzo, e non altrimenti li quali danari sono al presente nella possessione del dicto Testatore nel dicto loco de Cloux como el dice. Et similmente el dona et concede al dicto de Melze tucti et ciaschaduni suoi vestimenti quali ha al presente ne lo dicto loco de Cloux tam per remunerazione de boni et

and all of the books the Testator is at present possessed of, and the instruments and portraits appertaining to his art and calling as a painter.

Item. The same Testator gives and bequeaths henceforth for ever to Battista de Vilanis his servant one half, that is the moiety, of his garden which is outside the walls of Milan, and the other half of the same garden to Salai his servant; in which garden aforesaid Salai has built and constructed a house which shall be and remain henceforth in all perpetuity the property of the said Salai, his heirs and successors; and this is in remuneration for the good and kind services which the said de Vilanis and Salai, his servants have done him in past times until now.

Item. The said Testator gives to Maturina his waiting woman a cloak of good black cloth lined with fur, a of cloth and two ducats paid once only; and this likewise is in remuneration for good service rendered to him in past times by the said Maturina.

Item. He desires that at his funeral sixty tapers shall be carried which shall be borne by sixty poor men, to whom shall be given money for carrying them; at the discretion of the said Melzo, and these tapers shall be distributed among the four above mentioned churches.

Item. The said Testator gives to each of the said churches ten lbs. of wax in thick tapers, which shall be placed in the said churches to be used on the day when those said services are celebrated.

Item. That alms shall be given to the poor of the Hotel-Dieu, to the poor of Saint Lazare d'Amboise and, to that end, there shall be given and paid to the treasurers of that same fraternity the sum and amount of seventy soldi of Tours.

Item. The said Testator gives and bequeaths to the said Messer Francesco Melzo, being present and agreeing, the remainder of his pension and the sums of money which are owing to him from the past time till the day of his death by the receiver or treasurer-general M. Johan Sapin, and each and every sum of money that he has already received from the aforesaid Sapin of his said pension, and in case he should die before the said Melzo and not otherwise; which moneys are at present in the possession of the said Testator in the said place called Cloux, as he says. And he likewise gives and bequeaths to the said Melzo all and each of his clothes which he at present possesses at the said place of Cloux, and all in

grati servitii, a lui facti da qui inanzi, che per li suoi salarii vacationi et fatiche chel potrà avere circa la executione del presente Testamento, il tutto però ale spese del dicto Testatore.

Ordina et vole, che la summa de quattrocento scudi del sole che ha in deposito in man del Camarlingo de Sancta Maria de Nova nela città de Fiorenza, siano dati ali soy fratelli carnali residenti in Fiorenza con el profitto et emolumento che ne po essere debito fino al presente da prefati Camarlinghi al prefato Testatore per casone de dicti scudi quattrocento da poi el di che furono per el prefato Testatore dati et consignati alli dicti Camarlinghi.

Item vole et ordina dicto Testatore che dicto Messer Francisco de Melzo sia et remana solo et in sol per il tutto executor del Testamento del prefato Testatore, et che questo dicto Testamento sortisca suo pleno et integro effecto, et circa ciò che è narrato et decto havere tenere guardare et observare epso Messer Leonardo de Vince Testatore costituito ha obbligato et obbliga per le presente epsi soy heredi et successori con ogni soy beni mobili et immobili presenti et advenire et ha renunciato et renuncia per la presente expressamente ad tucte et ciaschaduna le cose ad ciò contrarie. Datum nelo dicto loco de Cloux ne la presencia de magistro Spirito Fleri Vicario nela chiesa de Sancto Dionisio de Amboysia, M. Gulielmo Croysant prete et capellani, magistro Cipriane Fulchin, Fratre Francesco de Corton et Francesco da Milano religioso del convento de fratri minori de Amboysia, testimonii ad ciò chiamati et vocati ad tenere per il iudicio de la dicta Corte in presencia del prefato M. Francesco de Melze acceptante et consentiente il quale ha promesso per fede et sacramento del corpo suo per lui dati corporalmente ne le mane nostre di non mai fare venire, dire, ne andare in contrario. Et sigillato a sua requesta dal sigillo regale statuito a li contracti legali d'Amboysia, et in segno de verita.

Dat·a di XXIII de Aprile MDXVIII avanti la Pasqua.

Et a di XXIII d'epso mese de Aprile MDXVIII ne la presencia di M. Gulielmo Borian notario regio ne la corte de Baliagio d'Amboysia il prefato M. Leonardo de Vince ha donato et concesso per il suo testamento et ordinanza de ultima voluntà supradicta al dicto M. Baptista de Vilanis presente et acceptante il dritto de laqua

remuneration for the good and kind services done by him in past times till now, as well as in payment for the trouble and annoyance he may incur with regard to the execution of this present testament, which however, shall all be at the expense of the said Testator.

And he orders and desires that the sum of four hundred scudi del Sole, which he has deposited in the hands of the treasurer of Santa Maria Nuova in the city of Florence, may be given to his brothers now living in Florence with all the interest and usufruct that may have accrued up to the present time, and be due from the aforesaid treasurer to the aforesaid Testator on account of the said four hundred crowns, since they were given and consigned by the Testator to the said treasurers.

Item. He desires and orders that the said Messer Francesco de Melzo shall be and remain the sole and only executor of the said will of the said Testator; and that the said testament shall be executed in its full and complete meaning and according to that which is here narrated and said, to have, hold, keep and observe, the said Messer Leonardo da Vinci, constituted Testator, has obliged and obliges by these presents the said his heirs and successors with all his goods moveable and immoveable present and to come, and has renounced and expressly renounces by these presents all and each of the things which to that are contrary. Given at the said place of Cloux in the presence of Magister Spirito Fleri vicar, of the church of Saint Denis at Amboise, of M. Guglielmo Croysant priest and chaplain, of Magister Cipriane Fulchin, Brother Francesco de Corton, and of Francesco da Milano, a brother of the Convent of the Minorites at Amboise, witnesses summoned and required to that end by the indictment of the said court in the presence of the aforesaid M. Francesco de Melze who accepting and agreeing to the same has promised by his faith and his oath which he has administered to us personally and has sworn to us never to do nor say nor act in any way to the contrary. And it is sealed by his request with the royal seal apposed to legal contracts at Amboise, and in token of good faith.

Given on the XXIIIrd day of April MDXVIII, before Easter.

And on the XXIIIrd day of this month of April MDXVIII, in the presence of M. Guglielmo Borian, Royal notary in the court of the bailiwick of Amboise, the aforesaid M. Leonardo de Vinci gave and bequeathed, by his last will and testament, as aforesaid, to the said M. Baptista de Vilanis, being present and agreeing, the right of water which

che qdam bone memorie Re Ludovico XII ultimo. defuncto ha alias dato a epso de Vince suxo il fiume del naviglio di Sancto Cristoforo ne lo Ducato de Milano per gauderlo per epso De Vilanis a sempre mai in tal modo et forma che dicto Signore ne ha facto dono in presentia di M. Francesco da Melzo Gentilhomo de Milano et io.

Et a di prefato nel dicto mese de Aprile ne lo dicto anno MDXVIII epso M. Leonardo de Vinci per il suo testamento et ordinanza de ultima volunta sopradecta ha donato al prefato M. Baptista de Vilanis presente et acceptante tutti et ciaschaduni mobili et utensili de caxa soy de presente nè lo dicto loco du Cloux, in caxo però che el dicto de Vilanis surviva al prefato M. Leonardo de Vince, in presentia del prefato M. Francesco da Melzo et io Notario etc. Borean.

the King Louis XII, of pious memory lately deceased gave to this same de Vinci, the stream of the canal of Santo Cristoforo in the duchy of Milan, to belong to the said Vilanis for ever in such wise and manner that the said gentleman made him this gift in the presence of M. Francesco da Melzo, gentleman, of Milan and in mine.

And on the aforesaid day in the said month of April in the said year MDXVIII the same M. Leonardo de Vinci by his last will and testament gave to the aforesaid M. Baptista de Vilanis, being present and agreeing, each and all of the articles of furniture and utensils of his house at present at the said place of Cloux, in the event of the said de Vilanis surviving the aforesaid M. Leonardo de Vinci, in the presence of the said M. Francesco Melzo and of me Notary &c. Borean.

APPENDIX

I.

THE HISTORY OF THE MANUSCRIPTS.

1. Leonardo by his will expressly devised all his MSS. and drawings to his younger friend Francesco Melzi, who carried them back to Milan. Four years after Leonardo's death Alberto Bendedeo wrote from Milan to Alfonso d'Este, Duke of Ferrara: "*Et perchè ho fatto mentione de la casa de Melzi, aviso a V. Ex. che un fratello di questo che ha giostrato fù creato de Lionardo da Vinci, et herede et ha molti de' suoi secreti, et tutte le sue opinioni . . . Credo ch'egli habbia quelli libriccini de Lionardo de la Notomia, et de molte altre belle cose.*" See G. Campori, *Nuovi Documenti*.

When Vasari visited Milan—probably in 1566—he saw Leonardo's MSS. in Francesco Melzi's possession, and wrote as follows: *Lionardo . . . di brutti caratteri scrisse lettere, che sono fatte con la mano mancina a rovescio; e chi non ha pratica a leggere, non l'intende, perchè non si leggono se non con lo specchio. Di queste carte della notomia degli uomini n'è gran parte nelle mani di messer Francesco da Melzo gentiluomo milanese, che nel tempo di Lionardo era bellissimo fanciullo e molto amato da lui, così come oggi è bello e gentile vecchio, che le ha care e tiene come per reliquie tal carte, insieme con il ritratto della felice memoria di Lionardo: e chi legge quegli scritti, par impossibile che quel divino spirito abbi così ben ragionato dell' arte e de' muscoli e nervi e vene, e con tanta diligenza d'ogni cosa. Come anche sono nelle mani di . . . , pittor milanese, alcuni scritti di Lionardo, pur di caratteri scritti con la mancina a rovescio, che trattano della pittura e de' modi del disegno e*

colorire. Costui non è molto che venne a Fiorenza a vedermi, desiderando stampar questa opera, e la condusse a Roma per dargli esito; nè so poi che di ciò sia seguito. (Ed. Sansoni, IV. 37).

In another place Vasari mentions that he himself possessed some drawings by Leonardo.

Lomazzo, the Milanese painter, writes, in 1590 (*Idea del Tempio della pittura*, 2nd Ed., p. 15):

Ma sopra a tutti questi scrittori è degno di memoria Lionardo Vinci, il qual insegnò l' Anatomia dei corpi umani, e dei cavalli, ch'io ho veduta appresso a Francesco Melzi, designata divinamente di sua mano. Dimostrò anco in figura tutte le proporzioni dei membri del corpo umano; scrisse della prospettiva dei lumi, del modo di tirare le figure maggior del naturale, e molti altri libri . . . Ma di tante cose niuna se ne ritrova in stampa; ma solamente di mano di lui, che in buona parte sono pervenute nelle mani di Pompeo Leoni; statovaro del Cattolico Rè di Spagna, che gli ebbe dal figliuolo di Francesco Melzi, e n'è venuto di questi libri ancora nelle mani del Sig. Guido Mazenta, Dottore virtuosissimo, il quale gli tiene molto cari.

2. In the short anonymous biography of Leonardo which, as it seems to me, must have been written somewhat earlier than Vasari's *Vite* (published by Milanese, *Arch. Stor. Ital.* XVI) the MSS. are mentioned in these terms: (*Leonardo*) *tornossene a Milano et dipoi in Francia al servizio del rè Francesco, dove portò assai de' sua disegni, de quali ancora ne lasciò in Firenze nello Spedale di S. Maria Nuova con altre mas-*

serizie et la maggior parte del cartone della sala del Consiglio, del quale è il disegno del gruppo de' cavalli che oggi in opera si vede rimaso in Palazzo . . . et lasci) per testamento a messer Francesco da Melzio, gentile hom) milanese, tutti i danari contanti, panni, libri, scritture, disegni et instrumenti et ritratti circa la pittura et arte et industria sua che quivi si trovava, et fecelo executore del suo testamento.

These references to them, which are the oldest known, may be supplemented by some information which I owe to the kindness of Signor Enrico Stevenson, Scrittore in the Library of the Vatican. MS. 71 Boncompagni (previously Albani 511), XVIth century, contains the catalogue of MSS. belonging to 'Sangallo'. In this catalogue a MS. volume, Tome XXXIX, is thus described: *Opinione di Leonardo da Vinci nel dipigniere prospettive, ombre, lontananze, altezze, bassezze d'apresso o da lontano, et altro.*

It seems therefore doubtful whether after the death of Francesco Melzi, about 1570, the Melzi family still possessed Leonardo's literary bequest intact, or at any rate, were the sole possessors of it. We have fuller information at the beginning of the XVIIth century, for Leonardo's MSS. had by that time become famous and were sought after as relics and curiosities. Guido Mazenta, who is mentioned by Lomazzo as possessing MSS. by Leonardo, was the brother of the author of an interesting memoir entitled: *Alcune memorie de' fatti da Leonardo da Vinci a Milano e de' suoi libri del P. D. Gio. Ambro Mazenta, Milanese, Cherico Reg^{te} minore di S. Paolo altrim^{ti} detti Barnabiti.*¹ An exact translation of this into French has been given by M. Eugène Piot in the *Cabinet de l'Amateur* (1863, p. 61—63). I quote from it the following passage relating to the history of the MSS.

Ala mort de Melzi . . . les manuscrits restèrent dans sa villa de Vaprio, où ses héritiers, qui avaient des goûts et des occupations bien différents,

¹ The Italian MS. by Mazenta was until 1882 in the possession of the firm of booksellers A. Firmin-Didot, of Paris; but I was constantly forbidden to examine its contents. It has lately passed into the possession of an antiquary in Paris. The following interesting passage is again taken from M. Piot's translation, which adequately takes the place of the original: *Ses observations s'étendent mêmes jusqu'aux choses historiques; il y met sous nos yeux les antiques cataractes dont les Ptolomées se servaient en Egypte pour répantrre et distribuer les eaux bienfaisantes du Nil; les belles inventions relatives à la navigation de la mer de Nicomédie, au moyen des lacs et des fleuves, dont il est question dans les lettres de Trajan et de Pline; mais je crois que ce curieux génie prenait plaisir à déguiser sous ces noms ceux de Milan et de Nuovocomo (!?).*

négligèrent à ce point ces trésors qu'il fut facile à Lelio Gavardi, qui enseignait les humanités dans cette famille, d'en prendre tout ce qu'il voulut et de porter treize de ces volumes à Florence, dans le dessin de les offrir au grand-duc. Mais ce prince tomba malade et mourut à son arrivée, et il vint à Pise chez Manuce. Je lui fis honte de son bien mal acquis, et il en convint. Mes études étaient finies, je devais partir: il me pria de reporter les volumes à Milan, ce dont je m'acquittai de bonne foi en consignait le tout au chef de la famille, le D^r Oratio Melzi, qui fut très-étonné de l'embarras que j'avais voulu prendre, et qui m'en fit don en me disant qu'il avait du même peintre beaucoup d'autres dessins qui demeurèrent abandonnés dans des caisses sous les toits de sa villa. Ces livres restèrent donc entre mes mains, et, plus tard, entre celles de mes frères. Ceux-ci en firent un étalage un peu trop grand, racontèrent à ceux qui les voyaient avec quelle facilité je les avais obtenus, de sorte que beaucoup de personnes retournèrent chez le docteur Oratio et en tirèrent des dessins, des modèles anatomiques, et beaucoup de précieuses reliques de l'atelier de Léonard. Pompeo Leoni fut un de ses chasseurs; son père avait été élève de Michel Ange Buonarrotti, et lui-même était au service du roi d'Espagne, pour qui il a fait tous les bronzes de l'Escurial. Pompeo promit au D^r Melzi offices, magistratures, siège dans le sénat de Milan, s'il pouvait reprendre les treize volumes et les lui donner pour les envoyer au roi Philippe, grand amateur de ces sortes de curiosités. Excité par de telles espérances, Melzi vint chez mon frère, le prie à genoux de lui rendre les manuscrits qu'ils m'avaient donnés; c'était son collègue au collège de Milan, bien digne de sa compassion et de son amitié; sept volumes lui furent rendus. Des six qui restaient à la maison, un fut offert au cardinal Frédéric Borromée; il est aujourd'hui conservé dans la bibliothèque Ambrosienne; c'est un in-folio, couvert de velours rouge, qui traite très-philosophiquement de la lumière et des ombres, au point de vue de la peinture, de la perspective et de l'optique. Un autre fut donné à Ambroise Figini, noble peintre de cette époque, qui le laissa à Hercule Bianchi avec le reste de son cabinet. Pressé par le duc Charles-Emanuel de Savoie qui désirait en posséder, j'en obtins de l'amitié de mon frère un troisième que j'envoyai à cette Altesse. Après la mort de mon frère, les trois autres sont parvenus entre les mains de Pompeo Arctini, qui, avec ceux qu'il avait recueillis, en sépara les feuillets pour en former un gros volume qui passa à son héritier Polidore Calchi, et fut vendu ensuite à Galéaz Arconati pour trois cents ducats. Cet homme généreux le conserve dans sa galerie remplie de mille choses précieuses; il a dû plusieurs fois rési-

ster aux prières du duc de Savoie et d'autres princes qui le lui demandaient: il en a refusé plus de six cents ducats.

3. The MSS. in the possession of the brothers Mazenta, had, it would seem, been gradually reduced to three. Guido Mazenta whose name is to be seen in the MS. given by him to Cardinal Borromeo (see Bibl. No. 2), died in 1613.

In 1636, Count Galeazzo Arconati—who is named in Mazenta's report—presented twelve MS. volumes by Leonardo to the Ambrosian Library at Milan. The explicit deed of gift may be seen, translated into French in the *Cabinet de l'Amateur*, 1861, pp. 53—59. In the catalogue of these MSS. the binding is more particularly described than the contents. The following twelve MSS. were included in this gift. 1. the Codex Atlanticus (Bibl. 38), 2. a MS. now lost, but described as follows:

Le deuxième est un livre in-folio ordinaire, de la grandeur du papier coupé ordinaire. Il est relié en bois couvert de cuir rouge, orné de frises et de fleurs d'or. Le volume est entièrement composé de feuillets de vélin et commence par ces paroles, écrites en rouge: TAVOLA DELLA PRESENTE. Suivent huit feuillets sans pagination. Elle commence au suivant, qui a un ornement en tête qui dit: Excellentis s. prencipe, etc., et la pagination suit jusqu'au cent vingtième feuillet, quatre-vingt-sept pour le text, trois blancs et le reste des dessins divers coloriés, le premier desquels est intitulé: Sfera solida, et le dernier: Piramis laterata exagona vacua; au fond du feuillet est un texte grec qui exprime la même chose.

3. *Le troisième est un livre in-quarto, relié en vélin, sur le dos duquel on lit les paroles suivantes: DI LEONARDO DA VINCI; il est de cent feuillets juste, mais le premier manque; sur le second il y a quelques cerises noires, feuilles et fruits coloriés. Dans l'intérieur du volume, au feuillet 49, on a inséré cinq feuillets de dessins variés, armes de hast pour la plupart, et à la fin un autre petit volume (volumetto) de diverses figures de mathématiques et d'oiseaux, de dix-huit feuillets, qui a été cousu dans la même reliure en vélin.*

Bibl. 3, 4. Ash. II and B: The appendix (volumetto) is now lost; the last mention of it occurs in Venturi's *Essai* (1796). Compare No. 1465, Note 4.

4. MS. of 114 leaves (see Bibl. 5, 6, Ash. I and A).

5. *Le cinquième est un autre livre semblable, in-quarto, couvert, comme le précédent, de cinquante-quatre feuillets. Sur le premier sont dessinées diverses têtes bouffonnes, et sur le dernier quatre colonnes de texte, écrites à rebours. Il est marqué sur le dos LEONARDO DA VINCI.*

This description corresponds with the MS., Bibl. 28 Tr. 6.

6. MS. see Bibl. 25, E.

7. MS. see Bibl. 22, F.

8. MS. see Bibl. 26, G.

9. Three MSS. bound in one vol.; see Bibl. 8—10, H¹, H², H³.

10. Two small MSS. bound in one, see Bibl. 13, 14.

11. MS. see Bibl. 18, L.

12. MS. see Bibl. 27, M.

In 1674 Count Orazio Archinti presented to the same Library a MS. by Leonardo, consisting of three small note-books in one Vol.; Bibl. 32—34.

In 1790, Stefano Bonsignori made a short catalogue of the MSS. in the Ambrosian Library at Milan. It includes 1. MS. C. A, see Bibl. 28; 2. MS. B and Ash. II, see Bibl. 3, 4; 3. MS. Ash. I and A, Bibl. 5, 6; 4. MS. D, Bibl. 31; 5. MS. E, Bibl. 25; 7. MS. G, Bibl. 26; 8. MSS. H¹, H², H³, Bibl. 8—10.

The descriptions of the others are too vague and slight to admit of our indentifying by them any MSS. now existing: 6. *Miscellanea; idrostatica, etc. È in-8 piccolo, in cartone rustico.* 9. *Miscellanea. Moto, macchine, macchinette da forar cristalli, etc. È in-16, legato in pergamena.* 10. *Miscellanea in-16, in cartone rustico,* 11. *Miscellanea. Abbozzi informi, moto ecc. È in-16, pergamena (see Dozio, degli scritti . . . di Leonardo da Vinci. Milano 1871, pp. 21—24).* It will be observed that one MS. fewer is here named than in the deed of gift from Count Arconati; on the other hand a MS. D, not previously mentioned, is now included. The fifth MS. of Arconati's list is evidently wanting in this list. The volume given to the Ambrosian Library by Cardinal Borromeo in 1603 (Bibl. 2, C) seem also to have been omitted. It is evident then that we cannot exactly determine how many of these MSS. were to be found in the Ambrosian Library in the year 1796. At the suggestion of Bonaparte the Directory of the French Republic conveyed many works of art from Italy into France. So much as this is, at any rate certain: in August 1796 the Codex Atlanticus was in the Bibliothèque Nationale: and "*Douze petits MSS. de Leonardo de Vinci, sur les sciences*" were in the Institut National (Institut de France). The authors of the catalogue of the pictures and MSS. removed from the Ambrosian Library—Peignon, *commissaire de guerre* and *le Citoyen Tinet, agent des Arts*' (dated Milan, May 24, 1796) either do not mention Leonardo's MSS. at all, or—which is more probable—include them under the following somewhat vague designation "*Le Carton des ouvrages de Leonardo d'avinci*". It is certain, on the other hand, that in 1815 the commissary of the

Austrian government demanded the restoration to the Ambrosian Library of thirteen (or fourteen?) MSS., being the number stated in Venturi's Essay written in 1796. (Venturi says in his essay: *Les Manuscrits sont au nombre de quatorze, parceque le Volume B contient un appendice de dix-huit feuillets qu'on peut séparer et considérer comme le quatorzième volume*).

However, only the Codex Atlanticus found its way back again; the other twelve MSS. remain in the possession of the Institut de France. These facts cover all that is known of the history and fate of the volumes now on the continent, that is to say in France and Italy.

I am unfortunately not in a position to give so full an account of the vicissitudes of such of Leonardo's MSS. as are now in England. Of the MS. volume at Windsor, W. L. (Bibl. 36) Chamberlain tells us (Original Designs, London, 1812): *It was one of the three volumes, which became the property of Pompeo Leoni that is now in his Majesty's possession. It is rather probable than certain that this great curiosity was acquired for King Charles I. by the Earl of Arundel, when he went an Ambassador to the Emperor Ferdinand II. in 1636, as may indeed be inferred from an instructive inscription over the place, where the volumes are kept, which sets forth that James King of England offered three thousand pistoles for one of the volumes of Leonardo's works. And some documents in the Ambrosian Library give colour to this conjecture. This volume was happily preserved, during the civil wars of the last century, among other specimens of the fine arts, which the munificence of Charles I. had amassed with a diligence equal to his taste. And it was discovered soon after his present Majesty's accession, in the same cabinet, where Queen Caroline found the fine portraits of the court of Henry VIII. by Hans Holbein, which the King's liberality permitted me lately to lay before publick.*

Chamberlain, apparently misled by the well-known inscription¹ in the Ambrosian Library seems to assume that Lord Arundel must

have derived the Leonardo MSS. in his possession from Arconati, and not from Spain; but Mr. Alfred Marks of Long Ditton, has lately disproved this clearly in two contributions to the Athenaeum, Nos. 2626 and 2645. John Evelyn in his Memoirs (Vol. I, p. 213 ed. 1818) tells us that when travelling in Italy in 1646 he received from Lord Arundel, then sick at Padua, where he died in the course of this year, advice as to what he should try to see. Afterwards, visiting the Ambrosian Library, Evelyn writes:—

"In this room stands the glorious (boasting) inscription of Cavaliero Galeazzo Arconati, valuing his gift to the librarie of severall drawings by Da Vinci, but these we could not see, the keeper of them being out of towne and he always carrying the keys with him, but my Lord Martial, who had seene them, told me all but one booke are small, that an huge folio contain'd 400 leaves full of scratches of Indians [sketches of engines?] &c., but whereas the inscription pretends that our King Charles had offer'd 1,000 l. for them, my Lord himselfe told me that it was he who treated with Galeazzo for himselfe in the name and by permission of the King, and that the Duke of Feria, who was then Governor, should make the bargain: but my Lord having seen them since did not think them of so much worth."

The leaves of the Codex Atlanticus are numbered up to 393; hence it is probable that in giving this description Lord Arundel had this single MS. in his mind. The MS. W. L. at Windsor which, with the MS. C. A. formerly belonged to Pompeo Leoni now consists of only 234 folio leaves. Arconati (see above) mentions, it is true, one collection only of MSS. *i. e.* MS. C. A. as being in the hands of Pompeo Leoni; but it can hardly be doubted that the MSS. and drawings W. L. were also in his possession, since Leoni's name is given in the inscription on the old binding of the two volumes in the same way.

"Pompeo Leoni of Arezzo, Court sculptor to King Philip II. of Spain, died in Madrid A. D. 1610, as we learn from Carducho '*Dialogos de la Pintura*' (1633). Part of his property was publicly sold at Madrid; some works which had belonged to it being afterwards purchased by Charles the First when, as Prince of Wales, he visited Spain in 1623.

From the Spanish portion of Pompeo's collection thus sold came, in all probability, the two volumes of Leonardo's of which Carducho speaks as being then in the possession of Don Juan de Espina: "*Alli vi dos libros dibujados y manuscritos de mano del gran Leonardo de Vinchi, de particular curiosidad y doctrina*" ("two

¹ The following inscription is on the staircase of the Ambrosian Library

|| LEONARDI VINCI || MANU. ET. INGENIO. CELEBERRIMI || LUCUBRATIONUM. VOLUMINA. XII || HABES. O. CIVIS || GALEAZ—ARCONATUS || INTER. OPTIMATES. TUOS || BONARUM. ARTIUM. CULTOR. OPTIMUS || REPUDIATIS. REGIO. ANIMO. || QUOS. ANGLIAE. REX. PRO. UNO. OFFEREBAT || AUREIS. TER. MILLE. HISPANICIS || NE. TIBI. TANTI. VIRI. DEESSET. ORNAMENTUM || BIBLIOTHECAE. AMBROSIANAE. CONSECRAVIT || NE. TANTI. books," may we say? "one of sketches, one manuscript"), which the Prince of Wales had in vain sought to purchase. The contents of these volumes Carducho unfortunately describes only in very general terms. In Mr. Sainsbury's 'Original Unpublished Papers illustrative of the Life of Rubens,' we find evidence that Lord Arundel was subsequently in treaty for these very books, or, perhaps, for one of them only. On p. 294 will be found a note of Endymion Porter's "of such things as my Lord Ambassador St Francis Cottington is to send owt of Spaine for my Lord of Arondell; and not to forget the booke of drawings of Leonardo de Vinze w^{ch} is in Don Juan de Espinas hands." This is of the date 1629, when Sir Francis was for the third time setting out for Spain as ambassador. His negotiations for the book were unsuccessful, for on January 19th, 1636—37, we find (p. 299) Lord Arundel writing from Hampton Court to Lord Aston, then Ambassador to Spain,—“I beseech y^e be mindfull of D. Jhon. de Spinas booke, if his foolish humor change.” There can, I think, be little doubt that, on the change of Don Juan's "foolish humor," a priceless treasure, the object of so many fruitless attempts, at last rewarded the persistence of the great English collector" (A. MARKS).

Here, beyond a doubt, only the MS. W. L. is meant, for this, as being a collection of Leonardo's most important drawings, must be regarded as exceptionally precious. But did Lord Arundel ultimately get this Manuscript. We cannot say more than that this seems probable; and for this reason: Hollar engraved drawings of Leonardo's which are now in Windsor and inscribed them "W. Hollar fecit 1646 ex collectione Arundeliana",—drawings which *most probably* were included in this W. L. collection before it was divided.

On the other hand it can be positively shown that Lord Arundel possessed the MS. Br. M., Bibl. 23, which was no doubt purchased by him for a relatively small sum in consideration of the smaller artistic interest of the drawings, and for the same reason it is quite intelligible that no mention should be made of it in the correspondence at the time. But whether the MS. W. L. was purchased by Charles II. when Lord Arundel's collections were sold in Holland, or whether Charles I. had previously acquired it after his journey to Spain as Prince of Wales in 1623—when he, in person, purchased some works of art from among Leoni's collection, is not known. So much as this alone is certain, that it has now for a very long period belonged to the Royal collections.

Though Chamberlain's statement as to the

acquisition of Leonardo's MSS. and drawings in the Windsor Library is, as we have seen, probably inaccurate, we may still give credit to his information as to the finding of them by Queen Caroline in Kensington Palace, for he—as Royal Librarian at the time—must certainly have been acquainted with the facts. His statement is moreover confirmed by Walpole (Anecdotes of painting I, 84: *Soon after the accession of the late King, Queen Caroline found in a bureau at Kensington, a noble collection of Holbein's original drawings for the portraits of some of the chief personages of the court of Henry VIII.*)

This, however, is by no means the earliest information we possess regarding Leonardo's MSS. and drawings in the possession of Royalty. In the MS. Department of the British Museum I found an old inventory from which I give the following extracts: *List of the draw^{gs} in ye Cabinet in His Maj^{ty}s Lower Apartment in this is marked what has been Deliver'd for her Maj^{ty}s use* || Page 28. *A list of the Books of drawings and Prints in the buroo in His Majesty's great Closet at Kensington.*

No. 3. *By Hans Holbein those fram'd & hang at Richmond.*

No. 5. *Prints by Hollar; delivered to her Maj^{ty} Aug. 1735 and by her lent to Lady Burlington, since put in Volumes and laid in y^e Library at Kensington.*

No. 6. *Drawings by Leonardo de Vinci.*

No. 13. *Drawings by Leonardo di Vinci;—these mark^d with a cross were delivered for her Maj^{ty}s use in y^e year 1728.*

The oldest inventory in Windsor Castle—is only of the beginning of the present century. On p. 23 we find: "*Leonardo da Vinci, Tom. I*" and a list follows of the drawings, comprised on 41 pages. For instance: *page 1 His own portrait, profile, red chalk* (a well known drawing in the present collection). Only a few can be identified, for the descriptions are very brief. On p. 26 we come to "*Leonardo da Vinci, Tom. II*" which is also a list of drawings comprised on 40 pages. It begins: *page 1, the last Supper, the Architecture is varied in the painting at Millan where an open door is represented behind our Saviour, black chalk. NB. This Drawing was not in the Vol. compiled by Pompeo Leoni, but in one of the Volumes in the Buonfiliuolo Collection bought at Venice.* (By the way I mention that the drawing in question, still at Windsor, is not an original drawing, but an old copy). This gives us an incidental clue to a second source whence the treasures of the Windsor collection have been derived. Nothing more, however, is known concerning the Buonfiliuolo collection.

On p. 29 of the Inventory we come to a catalogue of the contents of a third Vol. of 205 sheets, in which 549 drawings are named and shortly described, for instance:

- No. 22 } 2 Heads, of Judas and one of the
Apostles for the last supper at Milan.
41 } 1 Mechanical Powers
1 } 1 Anatomy.

NB. All the Leaves from 41 to 142, except those few marked otherwise, are full of very copious and accurate studys in Anatomy which were done with the assistance of Marc Antonio della Torre &c.

- 143 } 1 Manuscript—Here ends the Ana-
1 } tomical study.

As the reader will have observed, the number of leaves in the MS. W. L. does not correspond to that in either of these three Volumes. There can be no doubt that, at that time most of the drawings had been taken out of it. Recently most of the finest drawings in the Royal collection have been mounted on card-board and arranged in four portfolios, while some

of the MS. leaves remain in the folio W. L. (Bibl. 36), and others are mounted on old thin card board, more particularly the texts W. P., Bibl. 15, and W. An. I, Bibl. 1; others again are not mounted nor even—at the present date—arranged. Their large number rendered it necessary that they should be classified according to their contents and the probable date of their being written, with a view to this present publication. I therefore sorted them under the following heads: W. H., Bibl. 16; W. An. II., Bibl. 17; W. M., Bibl. 19; W. An. III., Bibl. 24; W. An. IV., Bibl. 35; W., Bibl. 37. The loose leaves in the Windsor collection are numbered consecutively (from 1—249) without any reference to their connection, while the Roman numbers refer to those sheets which are mounted. By this means reference to the originals is facilitated.

It will be noticed that Anatomical writings preponderate greatly, and they are the portion which Vasari most admired, when he had the opportunity of seeing Leonardo's MSS. in Melzi's house.

II.

BIBLIOGRAPHY.

The Manuscripts are arranged here in the same chronological order as shown in Vol. I. pp. 5—7. The numbers of the sheets are generally not by the author, but in a more modern handwriting. The few instances when these numbers

A = Acqua (Water).
Ar = Architecture.
F = Forza (Force).
Fo = Fortezza (Fortress).
Ge = Geometry.
M = Moto, colpo (on movement &c.).
Ma = Mathematics.

are by Leonardo will be found mentioned in the lists. The bindings are in parchment, if not otherwise stated. The following abbreviations have been introduced in the description of the contents (the Italian words are headings used by Leonardo):

Mn = Machines.
O = Optics.
P = Peso (Weight).
Ph = Physics.
V = Volatili (Flight of Birds).
+ = blank pages.

2. C.

Inscribed in golden letters on the front cover: · VIDI · MAZENTÆ || PATRITII · MEDIOLANENSIS || LIBERALITATE || AN · M · D · C · III. Inside the cover: C and [O].—On the first sheet (by an unknown hand): Auto-graphum Leonardi Vincii || cujus in ejusdem rebus gestis meminit || Raphael Trichet Fres-

neus || agit autem de lumine et umbra.—First sheet verso: O.—Second sheet marked [G] and O. The following sheets are numbered 1—30, by an unknown hand. These numbers disagree with Leonardo's own numbers, here given in brackets (). He seems to have counted the sheets backwards. They are on the back of the sheets, but some are

wanting: 1^a 254 | 1^b (15) 253 | 2^a 221 | 2^b (14) 220 | 3^a 219 | 3^b (13) 218 | 4^a 217 | 4^b (12) 216 and Pl. VI, 3 | 5^a 252, 215, and Pl. VI, 2 | 5^b (11) moto, voce, forza e moto | 6^a del moto dell'aria e dell'acqua | O | 6^b (10) forza e peso, colpo | 7^a colpo, peso e forza; 213, A | 7^b (9) M, 30, P 12 lines, 160, F | 8^a 131, O | 8^b 259, 180, 260 | 9^a O | 9^b O | 10^a 262, 141 and Pl. II, 2, 3. | 10^a—11^b O | 12^a 258, 229 | 12^b 289 | 13^a 290 | 13^b 261 | 14^a 256 | 14^b (16) 255, 123 | 15^a M, A | 15^b (1)

720, 1458, 727 | 16^a de ochio, M | 16^b (19) O | 17^a O | 17^b (18) O | 18^a. 303 | 18^b and 19^a O | 19^b 1334, 1380 | 20^a and 20^b O | 21^a 174 | 21^b (17) 257 | 22^a A, M, O | 22^b (8) P | 23^a 251 | 23^b (7) A | 24^a 250 | 24^b (6) A | 25^a A, O | 25^b (5) M, A | 26^a A | 26^b (4) 931, acqua e terra | 27^a O | 27^b (3) 53, O | 28^a M | 28^b (2) P | 29^a inscribed by an unknown hand: le carte sono di n^{ro} 28 cioè Ventiotto. 29^b [G] 30^a O | 30^b. +

3. B.

Binding in pig-skin; marked B inside the front-cover. On the first sheet is a short, indistinct note in Spanish, probably by P. Leoni, stating that Leonardo wrote backwards. The following sheets are numbered by very large numbers from 3—90 (see the facsimile Pl. LXXIX, 2): 3^a. Drawings in water colours, representing some fruits | 3^b 329, 346, 638, 675, 1188, F | 4^a 1509, 1131, Ph | 4^b A, 1212 Ma | 5^a Fo | 5^b and 6^a Mn | 6^b Mn | natura de' spechi | 7^a and 7^b Mn Fo | 8^a 1497 | 8^b 10^a Arms | 10^b da passare un fiume, Ge | 11^a Mn | 11^b Pl. 4. Ash. II.

16 sheets, small numbers; sheets 1 and 16, and 2 and 15 forming originally one sheet, are tinted in blue on the inside and have drawings of arms, drawn with the silverpoint; the outside is left blank. On sheets 3^a and 14^a are three drawings in water colour, apparently not by Leonardo. They represent instruments. 4^a 1127 | 4^b 1115, Fo | 5^a Fo | 5^b 1120, Mn | 6^a 1116 | 6^b Pl. A splendid edition of the whole volume was
published in 1881 by A. Quantin, Paris.
It contains photographs of all the texts. M.
Charles Ravaisson-Mollien, the editor, has added
to the facsimile the transcript of the Italian,
a French translation, notes and an elaborate
index.

8. H.³

The three small Note books H³ H² H¹ are bound in one Volume. From the dirty state of the sheets at the beginning and at the end of each division it becomes apparent that Leonardo had used them separately. The cover is in parchment and is twice marked H on the outside and once inside, and Q on the back of the first sheet. Inside the back cover is the mark Q^a, and on the last sheet but one N N 48, meaning probably the number of sheets originally belonging to H.³ MSS H² and H³ are numbered throughout. The sheets of H³ are also numbered 1—47, below the text and in a reversed position. The numbers here given are above the text | 47^a A | 47^b 1389 | 48^a Ma | 48^b dimmi semai, sketch of a man's head in profile | 49^a, 49^b Mn | 50^a 670 | 50^b, 51^a notes | 51^b 689 | 52^a 999 | 52^b 736 | 53^a 1264, 690 | 53^b—55^a Mn | 55^b

Sketch reproduced with No. 1112 | 56^a, 56^b P | 57^a P, 1462 | 57^b M. sketch of a horse | 58^a sketch of horses and oxen drawing a car | 58^b 1460 | 59^a—60^b Mn | 61^a 831 Mn | 61^b—69^b Mn | 70^a 691 | 70^b 1191 | 71^a 1192 | 71^b—73^a Mn | 73^b Pl. 15. W. P.

Most of these researches are written on loose sheets of unequal size. The dimensions of each sheet are here given in brackets: 1^a (20¹/₂ × 30 Cm) 324 | 1^b 322 2^a (21³/₄ × 26¹/₂) 310, 337, Pl. VII, Nos. 1 and 2* | 2^b sketch of a horse's legs, measurements and notes. 3 1^a (13¹/₂ × 14¹/₂ Cm) Pl. XI, 318 | 3 1^a (17 × 15 Cm) Pl. VII, No. 4, 327, 321 | 3 1^b, 3 1^b + | 4^a (21 × 12¹/₂ Cm) Pl. XIX, No. 1, 347 | 4^b 325 | 5^a (44 × 32 Cm) 341 ll. 1—4, 317 ll. 1—13, 625, 341 ll. 5—8, 317 ll. 14—17, Pl. XXXV, No. 1, 348 ll. 16—55, ll. 11—15, Pl. XVII, No. 2, 336, 348 ll. 1—10 | 707, 348, 56—68 | 5^b Vol. II, p. 44 Fig. 1 and p. 47 Fig. 3 | 6 1^a (21¹/₂ × 16

Cm) Pl. VIII, No. 2, 332 | 6 1^b 333 | 6 1^a (22 × 14³/₄ Cm) Pl. XIV, No. 2, 334 | 6 1^b Pl. XVI, No. 1, 335 | 7^a (40 × 28 Cm) 1410, 314, 338, 328, Pl. XIII, 326, 330, Pl. XIV, No. 1 | 7^b 349, Pl. XX, 339, Pl. XVI, No. 2, 342 | 8^a (28 × 20¹/₂ Cm) Pl. XV, 331, 345, 323 | 8^b + | 9^a (27 × 20¹/₂) V | 9^b + | 10^a, 10^b (22 × 16 Cm) Mn | 11^a (29¹/₂ × 20 Cm) Pl. LXIII, 684 | 11^b 685 | 12^a Pl. X, 316. — Sheets 9—12 which treat on different subjects are only added here, because in the Windsor Collection they form a set with Sheets 1—8. The thin cards, on which these sheets are mounted have a broad ornamental border in water colours.

16. W. H.

With regard to these studies see Vol. II, p. 4. The sheets are numbered 46—68, differing in size, and many not mounted are coloured in various tints: Compare also Lomazzo, Trattato dell'arte

della pittura I chap. 20, IV, 23 and Idea del tempio della pittura chap. 16. — Vasari also mentions these studies. 64. 716 | IV. 717.

17. W. An. II.

The sheets forming this treatise are all of the same size and originally formed a small book. At present the sheets are separated. The old numbers and marks which are to be found on most of the sheets are here given in brackets after the new numbers: 36 (21) 797 | 36^b muscles of the leg | 37^a 814, Pl. CVIII, No. 4 | 37^b the veins on the head &c. | 38^a (0) 38^b veins of the leg | 39^b veins on the leg and on the spine | 39^b 801 | 40^a nervi, matrice | 40^b + | 41^a (7) Delli musscholi che movā li labri della bocha | 41^b nervi, matrice | 42^a (10) nervi | 42^b veins of the leg | 43^a (8) Delli musscholi che movā la lingha | 43^b muscles of the foot, 843 | 44^a (3) veins of the arm | 44^b veins | 74^a (12) veins of the womb | 74^b muscles on the arm of the ape (scimmia) and of man (omo) | 75^a (2), 75^b muscles of the leg | 76^a dello vñtio de mesoplevri | 76^b Pl. CVIII, No. 1,

809 | 77^a (21) muscles of the leg | 77^b, 78^a (11) veins of the leg | 78^b veins of the hand | 84^a (10) 84^b the chest | 85^a the lungs | 85^b albero di tutti i nervi | 86^a (13) arteries | 86^b veins of the arm | 87^a (14) the lungs, 87^b the heart | 125^a—127^a (4) blood-vessels | 127^b the spine | 128^a (5) the mouth and the lips | 128^b matrice di uaccha | 156^a, 156^b genitals | 173^a (16. 17—two sheets, not separated) intestines 827 | 173^b 816 | 178^a, 178^b intestines | 183^a veins on the neck | 183^b veins | 201^a (M) bones | 201^b 1215 | 202^a (·B·) 1412, 838 | 202^b 839 genitals, | 203 (24) 1178, 375, Pl. XXIII, No. 1 | 203^b 357, Pl. 19. W. M.

See Vol. II, p. 224 and No. 1051 Note. As to the Maps in MS. W. L. see No. 36. The following maps are on separate sheets 1. Pl. CXIII, The original is somewhat larger (19 × 13¹/₄ in) ; the whole is executed in water colours. The rivers are in blue 2. Pl. CXIV, (15³/₄ XII, in) | 3. Part of the Arno, in water-colours (39 × 22) Pl. CXII. 4. Map of a part of

Tuscany, in water colours (40 × 27 Cm), including Livorno, Pisa, Luccha, Volterra. 5. Central Italy (45 × 23 Cm) within the limits of Corneto, Rimini, Pesaro, washed in Indian ink. 6. Study for the Map Pl. CXIII, washed in Indian ink; the names are written in Leonardo's ordinary writing (28 × 21 Cm).

20. S. K. M. I.¹

This small MS. is bound in one Volume with MS. S. K. M. I.². On the first sheet is the note, written in German: Leonardo da Vinci der größte Maler auß der italtenischen Schule 1452 zu Vinci geboren, trat 1502 als Krieggbaummeister in die Dienste || Herzogß Valentin Borgia, und starb 1519. — This volume and the two others now in the Forster Library of the South Kensington Museum, London, were given to Mr Forster by Lord Lytton, who is said

to have bought them at Vienna for a low sum. The title of the treatise on sheet 1^a is given in 1374, Note; no other subject is discussed on the 38 sheets which form this MS. 1^b 1374 jo voglio abbassare la grosseza d'una tavola a data grosseza senza mytatione di sua larghezza | domädo quäto cresce in sua lügezza &c. | 4^a, 6^a, 8^b, 11^a, 12^a, 16^b are blank. — On the last sheet 39^a is the mark 46.

21. S. K. M. I.²

See introductory note to No. 20. — At the end of this Note book is the mark BB 14. This MS. has the pages numbered 1—28. — 1—4 Mn | 5 635, 649 | 6 Mn | 7 385 | 8 650,

24. W. An. III.

Among the numerous anatomical drawings in the Windsor Collection there is one set which appears to have formed originally a Volume by itself. Here the paper is of a thin greyish blue colour and of a rather rough surface. Leonardo seems to have made use of it exclusively for this particular treatise. All the sheets are of the same size. Each of them is marked by a Roman capital letter, as shown here in brackets. Sheet 217 bears the date 1513. — 115^a (B) *on veins* | 115^b *the heart* | 116^a (K) *blood-vessels* | 116^b + | 117^a (E) *spine and shoulders* | 117^b + | 118^a (H) *blood-vessels* | 118^b + | 161^a (O) *blood-vessels* |

29. Leic.

Bound volume in leather cover. On the first five sheets before the beginning of the original MS are the following Notes. On 1^a marked in pencil 596: This treatise on the nature, weight and motion of water . . . has never been printed. On the reverse of the modern title may be found an extract from the life of Lionardo da Vinci, by Dufresne, in which this volume is particularly mentioned. It appears from the title page (although the name of the possessor has been obliterated) that it has belonged to Giuseppe Ghezzi, an eminent painter at Rome. — W. Roscoe. 1^b + | 2^a + | 3^a Libro Originale || Della Natura, peso, e moto delle Acque, || Composto, scritto, e figurato di proprio || Carattere alla mancina || Dall' Insigne Pittore e Geometra || Leonardo da Vinci || In tempo di Ludouico il Moro, nel condur || che fece le Acque del Nauilio della || Martesana dall'Adda a Milano. || Si autentica con la precisa Mentione che ne fà Raffaelle du fresne nella Vita di detto Leonardo, descritta nel suo Libro stampato in Parigi da Giacomo Longlois l'Anno 1651 intitolato || Trattato || Della Pittura || Acquistato 'conla gran forza dell'Oro' (these words cover an erasure), per sublimare || le fatigose raccolte del suo studio || da || Giuseppe Ghezzi Pittore in Roma || 3^b (in another handwriting) Soleua il Vinci scrivere Alla mancina, secondo l'uso degli Ebrei, nella qual maniera erano scritti quei sedici Volumi de quali di già abbiamo fatto menzione, et esendo il carattere buono, si legeua assai facilmente mediante un spechio grande, è probabile ch'egli facessi questo, accio tutti non leggessero così facilmente i suoi scritti. L'impresa dell nauiglio di Martesana gli diede ocacione di scriuere un libro della natura, peso e moto delle Aque pieno di gran numero di disegni di varie rote, Machine per molini, a regular il corso dell'aque, e leuarle in Alto | 4 + | 4^a (in an earlier handwriting) Libro scritto da Leonardo Vincio che tratta del sole, della luna del corso dell'acqua dei ponti e dei moti | 4^b + | The arrangements of this MS. are somewhat unusual. On the head of many pages there are title lines here placed between ' giving the numbers of 'cases' (casi)

or subjects treated on the page. Most of these cases are introduced by 'Come' (How, or that). 1^a 864 | 1^b 1082, 901 | 2^a 902, Pl. 37. W.

The detached sheets of MSS. in the Windsor Collection chiefly treat on Anatomy. They vary greatly in size, nor is there any consecutive order. The following account of the very rich materials must therefore be confined here to general statements 1^a. 387, Pl. XXIV, No. 1 | 1^b + | 2^a Fo | 2^b + | 3^a 379, 297, Pl. XXIII, No. 4 | 3^b drawing of a head | 4^a Mn, Anatomy | 4^b writing by an unknown hand with the date 1443 | 5^a A P 1411 | 6^a 6^b measurements of a horse | 8^a drawing of legs | 8^b Joannes de pasqualibus debet dare etc. by an unknown hand; 9^a sketch of a head, not by Leonardo; 9^b P M., drawing of a horse Vol. II p. 24 above to the left | 10^a—35^b chiefly small drawings | 36^a 797 | 36^b legs and muscles | 45^a intestines | 45^b + | 69^a Mn, 69^b + | 70^a Pl. LII, No. 1 | 70^b + | 71^a—73^b mostly sketches | 79^a 79^b anatomy of the head | 81^a 83^a anatomy | 83^b + | 88^a the muscles | 88^b + | 92^a—99^a sketches | 100 standing male figure | 100^b + | 101^a Pl. XXXVIII, No. 3 | 101^b + | 102^a (19. 21) Pl. XXVIII, No. 7 | 102^b + | 103^a standing male figure | 103^b + | 104^a Pl. VII, No. 5 | 104^b + | 105, III—114 various sketches | 119^a 313 Pl. VII, No. 3 | 120^a 121^a sketches of heads | 122^a Pl. CI, No. 3 | 123^a a similar drawing | 129^a blood-vessels | 129^b polmone | 136^a—144 anatomy, various notes and sketches | 158^a 608, Pl. XXXV No. 2 and 3 | 158^b 609 | 165^a cuore polmone | 165^b drawing of a female head, not by Leonardo | 174^a 1362 | 175—180 anatomy | 185^a—187^b anatomy | 188^a Ar | 188^b anatomy | 190 Ar, Ph | 190^b anatomy | 191^a Ge, 1475 | 191^b intestines | 194^a

195^b muscles, the heart | 197^a 351, Pl. XIX, No. 2 | 197^b sketches | 198^a legs | 207—209 Mn Ph | 210^a 799 | 210^b popilla de' animali nocturni | 215^a 358, Pl. XXII, No. 2 | 215^b + | 219^a 219^b muscles of the arm | 224^a veins | 224^b + | 231^a 477, Pl. XXXVI, Pl. XXXVII | 233^a A, 233^b + | 235—238^a vento, A, P, anatomy | 238^b 807 | 239^a 811 | 239^b + | 240^a Io ò per strumento di questo 4^o libro a maneggiare 6 cose, cioè polo, subbio, leva, corda, peso e motore | 240^b 365, 269 | 241^a 1157, 1358, 844, 1210 | 241^b + | 243^a 681, Pl. LXII, No. 2 | 243^b + | 244^a sketches of trees | 244^b + | 245^a sketch of fire | 245^b + | 246^a Pl. XL, No. 2 | 246^b + | 247^a—249^a sketches of horses | 250 anatomy.—The following Roman numbers refer to selected drawings with MSS., most of which are mounted on cartoons: I Pl. XXXII, 137, 575, 577 | II 170 | III 356, Pl. XXI | IV 389 Pl. XXV | V Pl. XXVI* | VI 456 | VII 475 | VIII 642, IX 688, Pl. XLIV | X 710, 1413, 878 | XI 711, Pl. LXXV | XII 713, 1175, XII^b 1547 | XIII 639, 714, 852, 1186 | XIV 715 | XV 717 | XVI Pl. LXXX, No. 4 (reversed in the reproduction) | XVII Pl. LXXXIII, 1103, XVII^b 1104 | XVIII CII, No. 1 | XIX Pl. CI, No. 1, 760 | XX Pl. CI, No. 3 | XXI 800, 833 | XXII 803 | XXIII 804, 1494 | XXIV 823 | XXV 856 | XXVI 868 | XXVII 909 | XXVIII 1022 | XXIX 1140 | XXX 1329 | XXXI 1355, Pl. CXXII | XXXII 1532, Vol. II p. 24 the sketch on the right.

The Arabic numbers of sheets not given among the foregoing references will be found inserted in the notices of the various treatises at Windsor Castle, given previously under separate headings.

38. C. A.

This best known and most voluminous Volume is composed of loose sheets of various size, each folio containing one or more sheets of original MS. The mounting is the same as in the Volume W. L. Such sheets as have notes on both sides are not fixed by their back to the folio sheets, but set into a paper frame. The numbering of sheets refers only to the folios. In the interest of identification and in order to facilitate a comparison of the writing on the opposite sides of one

and the same sheet, I have introduced here, in addition to the numbers of Leoni's folio sheets, second numbers which refer to the separate original sheets.—In the following description it seemed to me desirable to refrain from giving detailed accounts of the contents of such sheets, as do not bear upon the various subjects of the present publication, the more so, as the order of the sheets, being quite accidental, throws no light whatever on the connection of the various stu-

dies extending over about thirty years. Outside the cover is the inscription in golden letters: DISEGNI . DI MACCHINE . DELLE . ARTI . SECRETE ET . ALTRE . COSE DI . LEONARDO DAVINCI RACCOLTI DA POMPEO LEO NI On the back of the cover is the No. 248. 1^a, 1^a and 1^b, 1^b 95 | 2^a 2^a—4^a 10^a Mn | 4^a 11^a 1553 | 4^b 11^b 631, 1359. *The following drawings and texts nearly all refer to machines* | 7^a 19^a 1119 | 11^a 37^a P | 11^b 37^b 1439 | 12^a 42^a 1286, Sketch Vol. II p. 62 | 16^b Pl. XCVI, No. 1 | 17^a 67^a Mn | 17^b 67^b 1361, 1533 | 19^a 72^a Ph | 19^b 72^b 1440, Mn | 26^a 87^a 1545 | 26^b 87^b Mn | 27^a 89^a 1441 | 27^b 89^b *canons* | 30^b 96^b 200, Pl. 42. *Among the drawings by Leonardo in the Gallery of the Ambrosian Library there is only one with a MS. note: 1456.*

43. *Collection of drawings, made by P. Resta, a large bound volume in the Ambrosian Library contains an anatomical drawing with notes by Leonardo.*

44. Munich, *Pinacoteca, a drawing with notes on warfare.*

45. *The collection of drawings made by Valardi, a large volume in the Library of the Louvre contains a sheet with notes on arms and several drawings by Leonardo, but only two out of these bear on the subjects of this publication: Pl. LXXX and Pl. LXXX, No. 1.*

46. Louvre, *Collection of drawings, mounted on card (not exhibited) see Vol. 1 p. 297 and No. 594 Note.*

47. Paris; *Collection of drawings in the possession of M. Armand; a drawing with MS. note similar to that at Munich and to that in the Collection of A. Morrison, Esq. London.*

48. *British Museum, Printroom. Several drawings by Leonardo: 1457 and Pl. LII, No. 2 and a drawing with MS. notes on warfare.*

49. *A mounted sheet Pl. LXII, No. 1 664, in possession of A. W. Thibaudeau, Esq. London.*

50. *Collection of A. Morrison, Esq. (see No. 47).*

51. *Collection of the late Prince Henry of the Netherlands; one sheet containing notes and a diagram, referring to Perspective.*

52. *The five Manuscript sheets formerly in the possession of Libri (described in his catalogue of the reserved portion), were bought in 1862 by the Marquis of Breadalbane. After his death they came into the possession of the Hon. Mr. Baillie Hamilton, Langton, Berkshire. Here they seem to have mysteriously disappeared, and I have not been able to trace them any further.*

53. *In the Library of Christ Church Oxford; two mounted drawings preserved in portfolios. The first is marked 4 and has notes on machines, on weight and a sketch of a horseman fighting. The second is reproduced in parts in Vol. 1 Pl. LIX, Pl. LX, No. 1, Pl. LXI 676, 677.*

54. Modena, Archivio Palatino: No. 1348.

55. *Treatise of Francesco di Giorgio, MS. in possession of Lord Ashburton, with notes in Leonardo's handwriting written on the margin, on Fol. 13^b 767, on Fol. 25^a 952, on Fol. 27^b 44. Others on mechanics &c. on Fol. 15^b, 32^a, 41^a and 44^b.*
